PREFACE

It has been suggested to me that of the sixteen Essays included in my *Studies in History and Jurisprudence* (which appeared in 1901) there are six that may with advantage be now published separately, because they all deal with a subject much studied in America and, to a less extent, in British Universities. These six, composed at different times, and several of them owing their origin to events that were then passing in the world, have a certain community of aim. All relate to Political Constitutions, the first two Essays being intended to indicate various points of view from which Constitutions may be examined and judged, while the other four serve to elucidate those points by concrete examples.

A Constitution is a Frame of Government designed to prescribe the form which the administration of a State takes, to define its powers over the citizen, and the rights of the citizen against it. It may be studied both in respect of its form and as a result of certain political forces. The first Essay, on *Flexible and Rigid Constitutions*, discusses the fundamental distinction between the two main classes into which frames of government fall, viz. Constitutions which can be changed by the ordinary legislative authority in the same way in which ordinary laws are enacted, and those which, because they cannot be so changed, stand above ordinary laws. It describes the character of each type, drawing illustrations chiefly from Rome, England, and the United States, considers the compatibility of each with democratic ideas and habits, and endeavours to appraise their respective merits, and to conjecture the part which each will play in the future.

The second Essay, *The Action of Centripetal and Centrifugal Forces on Political Constitutions*, suggested partly by the recent history of Iceland, partly by the Irish demand for Home Rule, and sketched out in the days before Mr. Gladstone had given his approval to that demand, treats of the various influences, some associative, some disjunctive, which tend either to consolidate smaller com-

munities into a large State, or to split up a large State into smaller communities. It shews what are the conditions that favour the working of one or other tendency, and the plans by which the framers of Constitutions have endeavoured to regulate both tendencies so as to secure stability and permanence. It estimates the strength which the two forces shew over the world at this moment, and glances at the possibility that the centripetal force which now seems the stronger may not always continue to be so.

The third Essay, entitled *Primitive Iceland*, was written after a visit to that isle. It contains a sketch of the early history of a singularly interesting people, and of the quite unique political arrangements which they created, as far back as the tenth century, when their noble literature was beginning to put forth its first buds. Iceland offers the best, perhaps the only complete, example of a State which was highly developed on its legal and judicial side, while scarcely developed at all upon the administrative side. Its annals teach us many things, and among them this, that primitive institutions are not necessarily simple, but sometimes highly complex, and that a taste for subtlety and formalism may appear at the very beginning of legal history.

The fourth Essay, *The Predictions of Hamilton and Tocqueville*, considers the history of the Constitution of the United States from the point of view of two great writers, who, the one at its birth, the other some forty years later, explained its leading features and gave a forecast of its probable development. Their respective prophecies are examined, and it is shewn in what respects the course of events has followed a line different from that which they expected.

In the two remaining Essays, *Two South African Constitutions* and *The Constitution of the Commonwealth of Australia*, the latest efforts of constructive skill in the creation of systems of government for democracies are analyzed and commented on. The Constitutions of the Transvaal Republic and of the Orange Free State have now disappeared, as both communities have been conquered and annexed to the British dominions. But these two instruments deserve to be remembered and studied, for they were unlike any others in the world. They

shewed features to be found neither anywhere in America, nor in Switzerland, nor in any British colony. Legal skill can perhaps be hardly attributed to the framers of either Constitution, for they were men of little knowledge and limited experience. But nowhere was there any scheme of government planned upon broader and simpler lines than that of the Orange Free State, nor any which worked better in practice. The new Constitution for Federated Australia is less peculiar, for it has followed in many points the Constitution of the United States, and in others that of the Canadian Dominion. It is, however, of great legal as well as political interest, and in some respects it is of all existing Frames of Government that which is most thoroughly penetrated by a democratic spirit, and has been most definitely adapted to the problems of the present.

There is thus, as I trust, a certain unity in these Essays, or what I may call a certain convergence of aim; while the juxtaposition of one of the earliest of modern Constitutions—that of the Teutonic Republic, which grew up in the tenth century amid the snows of the far North—and the latest—that of another Teutonic Commonwealth which, in A. D. 1900, arose under the Southern Cross by the union of six British colonies—may serve to convey to a reader some impression of the amplitude and variety of the subject. It is indeed a well-nigh inexhaustible subject, the details of which must of course be studied in many treatises, for no one book could present more than the broad lines. I have assumed in this volume that the student is a master of the English and the American Constitutions, and knows at least the general features of the Roman. Among other modern Constitutions which ought to occupy his thoughts, perhaps the most instructive, especially to an American reader, are those of Switzerland, of Canada, and of the German Empire. The Hungarian, the Belgian, and the Japanese also deserve examination. Those of the republics of Spanish America are copies, more or less divergent, of the Constitution of the United States.

The interest and value of the study of Constitutions lies not so much in a mastery of their technical details, and of the construction put on each of their provisions, as in apprehending the relation of each to the history of the nation

which has lived under it. Each must therefore be studied along with the annals of the political and economical life of the people. Every Constitution is the outcome of a nation's earlier history, the product of struggles which have determined the character of its government; and once that character has been determined, and a definite form given to it, whether by usage or by formal enactment in one or more instruments, the Constitution becomes itself a factor, and influences all the history that follows. It directs the course which the action of the people, or of a ruling class, tends to take. It educates the nation, moulds their ideas and beliefs, gives them the sense of a continuous and stable life, teaches them to respect the past, becomes—in some happy instances—the object of their reverence. If and when it does these things, it does them in virtue of its suitability to their conditions. If it is not suitable, which may happen if it is imposed by a dominant faction on a reluctant people, or hastily imitated from some state where conditions are different, or if the conditions of a country have so changed that its provisions no longer correspond to the new facts, its life may be troubled or short. Obvious as these considerations seem when stated in the abstract, history is full of instances in which they have been ignored, and usually with disastrous results.

As conditions never remain long the same in this changeable world, Constitutions need to be amended. Yet a principal merit of those which belong to the Rigid type is to give steadiness and permanence to the government carried on under them, which they cannot do if they are frequently altered. Here, therefore, is a constant difficulty, which can be overcome only by wisdom in statesmen, by patience and self-control in the people. To know when to bear inconveniences rather than incur the evils of change, to carry through change, when it has become inevitable, in a cautious and temperate way, so that evolution shall (as some one has said) avert revolution—this is one of the highest tasks and most searching tests of statesmanship and patriotism.

The mode of amending Constitutions, a topic discussed in the first Essay, has become one of special importance in modern times, and that for two reasons. The older Constitutions, such as that of England and that of Hun-

gary, are, like those of the ancient world, capable of being varied by the ordinary legislative authority without any special formalities. But nearly all recent Constitutions, including those of the United States, Switzerland, Canada, and Australia, are embodied in an instrument which can be altered not by the legislature in the course of its regular action, but only in a specially prescribed way, usually by a vote of the people. This provision is intended to place obstacles in the way of any but well-considered changes which the nation as a whole desire. But if the people contract the habit of frequently exerting their power, the security vanishes. Hence the need for making amendment a slow and comparatively difficult process. The other reason is that written instruments embodying fundamental laws and doctrines, which were formerly prized by the mass of the people as guarding the liberties they had extorted from a monarch or a ruling class, have in recent times been sometimes unwelcome to the masses, because they restrict the power which the legislatures, or the officials, whom the people choose, might at the people's bidding exert. There is, therefore, a probability that as the masses get more and more accustomed to the exercise of their own sovereignty, they may expunge from the Constitutions restrictions which they feel to hamper their own action, or may turn their amending power into a habitual use for purposes properly legislative of their supreme authority.

These risks, though they may have shewn signs of appearing in Switzerland, have not yet caused serious alarm in any democratic country. In the United States the Federal Constitution has not been amended for thirty-five years. State Constitutions have been greatly enlarged, and are still frequently altered; and though this has hitherto been due not to any volatile impatience on the part of the people, but rather to a distrust of the State legislatures, the tendency to direct legislation by popular vote is evidently a growing tendency, which may give a new turn to the working of these instruments, and materially affect the political life of the country. Thus we may say that the Constitutions of the several States of the Union are still in the stage of growth and development. The Federal Constitution develops in another way. Political events such as the annexation of Puerto Rico

and the Philippine Islands, economic events such as the growth of great combinations of capitalists, raise new questions, and the decision of these questions by the Federal Courts in so far changes the Constitution, that its words carry to us a new meaning, perhaps a much fuller meaning than they had before. That even a Rigid Constitution, and one whose formal amendment is exceptionally difficult, cannot stand unchanged from generation to generation is a truth which has become clearer now than it was a century ago.

The Constitution of the United States has in America been studied with more incessant diligence and keen acumen than any other document, except the New Testament, and has been approached from every possible point of view save one. It has been but little compared with other constitutional instruments enacted in and for other countries. That kind of study has indeed little importance for the practicing lawyer, but it is of real value to the statesman, and is still more essential to the political philosopher. The relation of the Courts to legislation, the modes of amendment, the rights guaranteed to the people, the respective merits of the system of a responsible head of the Executive, and of the system of an irresponsible head with a responsible Cabinet, and (in federations) the distribution of functions between Federal and State authorities—these are only a few of the many points in which the schemes adopted in Switzerland, Germany, Canada, and Australia deserve to be compared with the older American scheme by which they have each and all been influenced. There is much to be learned from a comparison and criticism as well of the legal forms under which government is carried on as of the actual political phenomena of civilized States. It has been my aim in these Essays to make such contributions as I can to this Comparative Study of Constitutions, in the hope that this branch of enquiry will be more actively prosecuted in the future, and that it may prove to be one of the most practically useful branches of political science.

JAMES BRYCE.

CONSTITUTIONS

I

FLEXIBLE AND RIGID CONSTITUTIONS :

I. THE CONSTITUTIONS OF ROME AND ENGLAND.

ROME and England are the two States whose constitutions have had the greatest interest for the world, and have exerted the greatest influence upon it. Out of the republic on the Tiber, a city with a rural territory round it no bigger than Surrey or Rhode Island, grew a World Empire, and the framework of that Empire retained till its fall traces of the institutions under which the little republic, circled and threatened by a crowd of hostile States, had risen to show herself the strongest of them all. In England a monarchy, first tribal and then feudal, developed from very small beginnings into a second World Empire of a wholly different type, while at the same time the ancient form of government, through a series of struggles and efforts, guided by an only half-conscious purpose, slowly developed itself into a system monarchical only in name. That system became in the eighteenth century the starting-point for all modern political philosophy ², and in the nineteenth the model for nearly all the schemes of free

¹ This Essay was delivered, in the form of two lectures, in 1884, and the names Flexible and Rigid were then suggested for the two types of Constitution here described. It has been enlarged and revised and brought up to date, but the substance remains the same.

² The interest which the English Constitution excited in Montesquieu may be compared with that which the Roman excited in Polybius.

representative polity that have arisen in the Old World as well as for many in the newer countries.

It is, however, not merely the range of their influence, nor merely the fact that, as the Roman Constitution worked upon the whole of the ancient, so the English Constitution has worked upon the whole of the modern world, that makes these two systems deserve constant study. Constitutions are the expression of national character, as they in their turn mould the character of those who use them; and the same causes which made both peoples great have made their political institutions also strong and rich, specially full of instruction for all nations in all times. There were in the fifth century B. C. hundreds of commonwealths in the Mediterranean countries with republican frames of government, many of which bore a general resemblance to that of Rome. There were in the fourteenth century A. D. several monarchies in Europe similar in their constitutional outlines to that of England, and with what seemed an equal promise of rich and free development. Of the former, Rome alone survived, destroying or absorbing all the rest. Of the latter, that of England is the only one which had at the end of the eighteenth century grown into a system at once broad-based and strong, a system which secured both public order and the freedom of the individual citizen, and in which the people were able to make their voice heard and to influence the march of national policy. All the others had either degenerated into despotisms or remained comparatively crude and undeveloped. Thus when, after the flood of Napoleonic conquest had subsided, the peoples of the European continent began to essay the establishment of free constitutions, they found in that of England the model fittest to be followed, and sought to adapt its principles to their own several conditions.

England, moreover, has been the parent of free governments in a further sense. Though she has not, like Rome, stretched her system of government till it

embraced the world, she has reproduced it in those parts of her transoceanic dominions where her children have been able to form self-governing communities. Reduced copies of the British Constitution have been created in seventeen self-governing colonies. Seven of these have in North America been united in a Federation whose frame of government is built on British lines. Six others, in Australia, have been similarly grouped in another Federal Government of a not less distinctively British type. And an independent Republic, far vaster in population than all these colonies put together, has, less closely, but yet in the main and essential points, reproduced the principles, although not the form, of the institutions of the motherland. It is, therefore, to Rome and to England that the eye of the student of political constitutions will most often turn. They represent the most remarkable developments of ordered political life for the ancient and for the modern world respectively. And whoever attempts to classify Constitutions and to note the distinctive features of the principal types they present, will find that it is from Rome and from England that illustrations can most frequently and most profitably be drawn¹.

II. THE TRADITIONAL CLASSIFICATION OF CONSTITUTIONS.

The old-fashioned classification of Constitutions which has come down to our own times is based on the distinction of Written and Unwritten Law, itself an ill-expressed and rather confusing distinction, because *ius non scriptum* is intended to denote customs: and when customs have been recorded in writing, they can hardly continue to be called unwritten. This classification places in the category of Written Constitutions those which are expressly set forth in a specially important

¹ As to the countries or peoples in which Constitutions in the proper sense can be said to exist, see Note at the end of this Essay.

document or documents, and in the category of Unwritten those which began, not in formal agreements, but in usage, a usage which lives in men's recollections, and which, even when it has been to a large extent defined, and secured against error, by being committed to writing, is recorded as embodying that which men have observed, and are deemed likely to continue to observe, not as that to which they have bound themselves formally by a law.

These terms are, however, not happy terms, although the distinction they aim at expressing is a real distinction. The line which they attempt to draw between the two classes of Constitutions is not a clear or sharp line, because in all Written Constitutions there is and must be, as we shall presently see, an element of unwritten usage, while in the so-called Unwritten ones the tendency to treat the written record of custom or precedent as practically binding is strong, and makes that record almost equivalent to a formally enacted law, not to add that Unwritten Constitutions, though they began in custom, always include some statutes. Moreover, these names, while they dwell on a superficial distinction, ignore a more essential one to be presently mentioned. Let us therefore try to find a better classification.

If we survey Constitutions generally, in the past as well as in the present, we find them conforming to one or other of two leading types. Some are natural growths, unsymmetrical both in their form and in their contents. They consist of a variety of specific enactments or agreements of different dates, possibly proceeding from different sources, intermixed with customary rules which rest only on tradition or precedent, but are deemed of practically equal authority. Other Constitutions are works of conscious art, that is to say, they are the result of a deliberate effort on the part of the State to lay down once for all a body of coherent provisions under which its government shall be established and conducted. Such Constitutions are usually comprised in one instrument—

possibly, however, in more than one—an instrument solemnly enacted whose form and title distinguish it from ordinary laws. We may provisionally call these two types the Old and the New, because all ancient and mediaeval as well as some few recent Constitutions are of the former kind, while most modern ones belong to the latter. The distinction corresponds roughly to that drawn, in England and America, between common law and statute law, or to the Roman distinction between *ius* and *lex*, so that we might describe the types as Common Law Constitutions and Statutory Constitutions respectively. Yet the line of demarcation is not always a plain one. In countries with constitutions of the Common Law type, statutes are frequently passed, declaring or modifying or abolishing antecedent usage, which supersede and replace parts, possibly large parts, of the common law maxims, so that at last most of the leading rules can be found in a few great statutes. On the other hand, the Statutory Constitutions become developed by interpretation and fringed with decisions and enlarged or warped by custom, so that after a time the letter of their text no longer conveys their full effect. It is, therefore, desirable to have some more definite and characteristic test or criterion whereby to mark off the two types which have been just described in general terms.

III. A PROPOSED NEW CLASSIFICATION OF CONSTITUTIONS.

Such a criterion may be found in the relation which each Constitution bears to the ordinary laws of the State, and to the ordinary authority which enacts those laws. Some constitutions, including all that belong to the older or Common Law type, are on the level of the other laws of the country, whether those laws exist in the form of statutes only, or also in the form of recorded decisions defining and confirming a custom. Such con-

stitutions proceed from the same authorities which make the ordinary laws; and they are promulgated or repealed in the same way as ordinary laws. In such cases the term 'Constitution' denotes nothing more than such and so many of the statutes and customs of the country as determine the form and arrangements of its political system. And (as will presently appear) it is often difficult to say of any particular law whether it is or is not a part of the political Constitution.

Other constitutions, most of them belonging to the newer or Statutory class, stand above the other laws of the country which they regulate. The instrument (or instruments) in which such a constitution is embodied proceeds from a source different from that whence spring the other laws, is repealable in a different way, exerts a superior force. It is enacted, not by the ordinary legislative authority, but by some higher or specially empowered person or body. If it is susceptible of change, it can be changed only by that authority or by that special person or body. When any of its provisions conflict with a provision of the ordinary law, it prevails, and the ordinary law must give way. These are features, partly political, partly legal, which mark off the two types of Constitution from one another; and although it will appear that in some few cases the question to which type the Constitution of a particular State belongs may be a nice one, still the general legal criteria to be applied are clear and definite. In a State possessing a constitution of the former—the older—type, all laws (excluding of course by-laws, municipal regulations, and so forth) are of the same rank and exert the same force. There is, moreover, only one legislative authority competent to pass laws in all cases and for all purposes. But in a State whose Constitution belongs to the latter—the newer—type, there are two kinds of laws, one kind higher than the other, and more universally potent; and there are likewise two legislative authorities, one superior and capable of legislating for all purposes whatsoever, the

other inferior and capable of legislating only so far as the superior authority has given it the right and function to do so.

The difference of these two types is best explained by illustrative instances. At Rome in the second century B. C. there was but one kind of enactment. All *leges* passed by the general assembly (whether *comitia centuriata* or *comitia tributa*) were of the same generality and the same force. There was but one legislative authority, the people voting in the *comitia*. So in England, during the last few centuries, there has been but one direct legislative authority, viz. Parliament, which is supreme, and all whose acts bind every citizen everywhere. Accordingly in England the laws called constitutional differ only in respect of their subject-matter from other laws, but are of no higher order. Each of such laws, though we call them in their totality 'the British Constitution,' is alterable by the ordinary legislative authority at any moment, just like other laws. Between an Act for making a railway from Manchester to Liverpool and an Act extending the electoral suffrage to all householders or disestablishing the Protestant Episcopal Church in Ireland there is no difference whatever in point of form or in degree of authority. In Switzerland, however, and in France the case is different. The Constitution of the Swiss Confederation is a document which was enacted by the people, and any amendment of which needs to be similarly enacted by them, whereas ordinary laws are passed by the Federal legislature of two Houses¹. The present Constitution of the French Republic was enacted by the two Chambers sitting together as a Constituent Assembly, and can be amended only by the Chambers sitting together in that capacity, after each Chamber has separately resolved that revision is needed, whereas ordinary laws are passed by

¹ It is unnecessary for the present purpose to call attention to the complication introduced in Switzerland by the application of the Referendum plan to ordinary laws.

the two Chambers sitting separately. Thus both in Switzerland and in France there is a distinction in the enacting authority, and therewith also a distinction in the quality and force of the laws enacted, the law which is called the Constitution being entirely superior to the other laws which are passed by the legislature in the ordinary every-day course of its action.

What in the case of each State of the latter or newer type may be the higher (and indeed supreme) authority which is alone competent to enact a Constitution depends upon the provisions of each particular system. It may be the whole people, voting by what is sometimes, though not very happily, called a plebiscite. It may be a body specially elected for the purpose, which dissolves when its work has been completed. It may be certain local bodies, each voting separately on the same instrument submitted to them. It may be, as in the case just mentioned of France, the ordinary legislature sitting in a peculiar way, or acting by a prescribed majority, or rendering several successive votes to the same effect at prescribed intervals of time. These are matters of detail. The essential point is that in States possessing Constitutions of the newer type that paramount or fundamental law which is called the Constitution takes rank above the ordinary laws, and cannot be changed by the ordinary legislative authority.

I have sought in many quarters for names, necessarily metaphorical names, suitable to describe these two types of Constitution. They might be called Moving and Stationary, because those of the older kind are virtually never at rest, but are always undergoing some sort of change, however slight, in the course of ordinary legislation, while those of the newer type abide fixed and stable in their place. Or they might be described, the former as Fluid, and the latter as Solid or Crystallized. When a man desires to change¹ the composition of a liquid, he pours in some other liquid or dissolves a solid

¹*I. e.* to change mechanically, not necessarily chemically.

in the liquid, and shakes the mixture. But he who wishes to alter the composition of a solid must first dissolve it or fuse it, and then, having got it into a liquid or gaseous state, must mix in or extract (as the case may be) the other substance. The analogy between these two processes and those whereby a Constitution of the older and one of the newer type are respectively changed might justify these names. But there is another and simpler metaphor, which, though not quite perfect, seems on the whole preferable. Constitutions of the older type may be called Flexible, because they have elasticity, because they can be bent and altered in form while retaining their main features. Constitutions of the newer kind cannot, because their lines are hard and fixed. They may therefore receive the name of Rigid Constitutions: and by these two names I propose that we shall call them for the purposes of this inquiry. If the characteristics of the two types have not been made sufficiently clear by what has been already said, they will probably become clear in the more detailed examination of them, to which we may now proceed.

I begin with Flexible Constitutions, not only because they are more familiar to students of Roman history and to Englishmen, but also because they are anterior in date. They are indeed the only constitutions which the ancient world possessed, for although, in the absence of Aristotle's famous treatise *On Politics*, we know comparatively little about most of the constitutions even of the more famous Greek cities (except Athens), and practically nothing about any others, save those of Rome and Carthage, there are reasons, to be given presently, why we may safely assume that all of them belonged to the Flexible type. But in the modern world they have become rare. Excluding despotically governed countries, such as Russia, Turkey, and Montenegro, there are now only three in Europe, those of the United Kingdom, of Hungary—an ancient and very interesting Constitution, presenting remarkable analogies to that

of England—and of Italy, whose constitution, though originally set forth in one document, has been so changed by legislation as to seem now properly referable to the Flexible type. Elsewhere than in Europe, all Constitutions would appear to be Rigid¹.

But a preliminary objection deserves to be first considered. Can we properly talk of a Constitution at all in States which, like Rome and England, draw no formal and technical distinction between laws of different kinds? Since there was at Rome and is in England but one legislative authority, and all its statutes are of equal force, how distinguish those which relate to the general frame of government from those which embody the minor details of administration? The great Reform Act of A. D. 1832, for instance—and the same remark applies to the parliamentary reform Acts of 1867 and 1884—was clearly a constitutional statute. But it contained minor provisions which no one could call fundamental, and some of which were soon changed by other statutes which would scarcely be described as constitutional. There are many statutes of which, as of the Municipal Reform Act of 1834 (and I may add as of the Local Government Acts of 1888 and 1894), it would be hard to say whether they are or are not constitutional statutes, and there are statutes which would not be termed constitutional (such as the Scottish Universities Act of 1852), which have in fact modified such a momentous constitutional document as the Act of Union with Scotland (5 Anne, c. 6, art. xxv).

Technically, therefore, we cannot draw a distinction between constitutional and other laws. There was in strictness no Roman Constitution. There is no British Constitution. That is to say, there are no laws which can be definitely marked off as Fundamental Laws, defining and distributing the powers of government, the mode of creating public authorities, the rights and immu-

¹ Except that of the South African Republic (Transvaal). The cases of the British self-governing colonies will be presently referred to.

nities of the citizen. That which we call the Constitution of the Roman State, that which we now call the Constitution of the United Kingdom, is a mass of precedents, carried in men's memories or recorded in writing, of dicta of lawyers or statesmen, of customs, usages, understandings and beliefs bearing upon the methods of government, together with a certain number of statutes, some of them containing matters of petty detail, others relating to private just as much as to public law, nearly all of them presupposing and mixed up with precedents and customs, and all of them covered with a parasitic growth of legal decisions and political habits, apart from which the statutes would be almost unworkable, or at any rate quite different in their working from what they really are. The most skilful classifier could not draw up a list that would bear criticism of Roman or of British statutes embodying the Constitution of either State: and even if such a list were prepared, the statutes so classified would fail to contain some cardinal doctrines and rules. Such a list, for instance, of British statutes would contain nothing about the Cabinet, and very little about the relations of the House of Commons to the House of Lords. On such subjects as the control of the House of Commons over foreign affairs, the obligation of the Crown to take, or the possible right of the Crown in certain cases to overrule, the advice of its ministers, no light would be thrown. Yet the statutes form the clearest and most manageable part of the materials which make up the British Constitution. Those other materials which have been referred to are by their very nature vague and indeterminate, unsusceptible of classification, and in many instances incapable of being set forth in definite rules¹. A certain part of them is already, or is on the way to become, obsolete. Another part is matter of controversy between different schools of jurists or historians. The same thing was true of Rome, for at Rome

¹ This point has been brought out with admirable force in Mr. Dicey's *Law of the Constitution*.

it would seem that no statute defined the power of the consuls, nor their relation to the Senate, nor set limits to the quasi-legislative authority of that great magistrate the Praetor. So far from being clearly ascertained were the powers of the Senate, that in Cicero's time it was matter of constitutional debate whether its decrees had or had not the full force of law¹; and men took one view or the other according to their political proclivities, just as in England men at one time differed regarding the right of the House of Lords to deal with money bills.

These facts are of course obvious enough to-day to every English lawyer, and indeed to those laymen who have some tincture of historical or legal knowledge. It is otherwise with the general public. To them the word Constitution seems to represent something definite and positive. Much of the current talk about the danger of altering the British Constitution² seems to spring from the notion that the name represents a concrete thing, an ascertainable and positive definite body of rules laid down in black and white. The Romans had no single word to convey what we mean by 'Constitution.' Even in the last days of the Republic Cicero had to use such phrases as *forma*, or *ratio*, or *genus rei publicae*, or *leges et instituta*; and what we call 'constitutional law' appears in the jurists of the Empire as *ius quod ad statum rei Romanae spectat*³.

The objection, however, which we have been considering, goes only to misconceptions that may arise from the word 'Constitution,' not to the use of the word itself, for some such word is indispensable. The thing exists, and there must be a name to describe it. A thing is not the less real because its limits cannot be sharply defined. A hill is a hill and a plain a plain, though you cannot fix the point where the hill subsides into the plain.

¹ See as to this, Essay XIV, p. 716.

² I have allowed these lines to remain, though they were more applicable in 1884 than they are in 1900, when so many changes have been effected that arguments about the danger of changing the Constitution are less frequently heard.

³ Ulpian in *Digest*, i. 1, 2.

The aggregate of the laws and customs through and under which the public life of a State goes on may fitly be called its Constitution; and even the still vaguer phrases, 'Spirit of the Constitution,' 'Principles of the Constitution,' may properly be used, since they too describe a general quality or tendency pervading the whole mass of laws and customs that rule a State which gives to this mass a character differing from that of the Constitution of any other State; just as each great nation has what we call a National Character, though this character can be more easily recognized than defined.

IV. THE ORIGIN OF FLEXIBLE CONSTITUTIONS.

Now let us return to consider the history and the attributes of Flexible Constitutions. We have seen that they are older than those of the Rigid type. It may be thought that this is so because they are more compatible with a rude condition of society, and because springing out of custom, always the first source of law, they are the simplest and most obvious form which regular political society can take. This is true, but does not fully explain the phenomena.

A Constitution properly so called is a frame of political society organized through and by law, that is to say, one in which law has established permanent institutions with recognized functions and definite rights. Now such forms of organized political society appear first in small communities, whether Urban, like the City States of Greece, or Rural, like those of early England or mediaeval Switzerland. Wherever in the earlier stages of civilization we find large communities, like Egypt, Assyria, Peru, Russia in the sixteenth century, we find that a tribal organization has passed into a despotism¹, appa-

¹ I use the term 'despotism' for convenience, but of course no monarchy is absolutely despotic, and least of all perhaps in the ruder ages; for monarchs are always amenable to public opinion, and most so when they are the leaders of a tribe or people in arms. The real distinction is between a government checked

rently without passing through the intermediate stage of a more or less restricted monarchy. Now in a small area men usually organize themselves in a regular community by vesting legal authority in a mass meeting of the citizens. The Folk Mot of our Teutonic ancestors, like the still surviving Landsgemeinde of Uri or Appenzell, represents in a rural community what the *ἀγορά* represents in Homeric Greece, what the *ἐκκλησία* represents in the later Greek cities, and what the *comitia* represent at Rome; I might add, what (in a more rudimentary form) the popular meeting represents to-day in Albania and what the similar meeting called a *Pitso* represents among the Basuto and Bechuana Kafirs. Such meetings, like the New England Town Meeting, are Primary, not Representative. They consist of all the freemen within the community, though, in their earlier stage, it is in practice the leading men who determine the action of the whole assembly. They make such laws as there are. Being not only the supreme, but the only legislative authority, they can at any moment change the laws they deem fundamental, if there are any such laws, for the more backward races remain in the stage of mere custom, and do not reach the conception of a fundamental law. Whether the system of their government is formally embodied in one group of specially important laws, or, as more often happens, is left to be collected from a number of enactments connected and supplemented by usages, that system remains on a level with all the other laws and usages, because it emanates from the same source, viz. the governing primary assembly. It is not till the growth of some scheme of representation has made familiar the distinction between the authority of the people themselves and that of their

by religious sentiment consecrating ancient usage and by the fear of insurrection, and a government checked by well-established institutions and legal rules. As to Russia, it may be noted that though she has no Constitution in the proper sense, there are said to exist three Fundamental Laws of the Empire—that declaring the sovereign's autocratic power, that requiring him (or her) to be a member of the Orthodox Church of the East, and that fixing the rule of succession to the throne.

representatives that truly Rigid Constitutions appear, for it is not till then that a method suggests itself of enacting a kind of law which shall be superior to that which the ordinary legislative body creates. Accordingly the Primary Assembly, whether in ancient Greece and Italy or in mediaeval Europe, works for some time, and may create by its constant action what is practically a Constitution (*i.e.* a set of established rules embodying and directing the practice of government), before the idea of a regular political Constitution emerges. That idea comes into being when in the progress of political thought and of jurisprudence men begin to distinguish between laws and customs which relate to the structure of the State and the management of its affairs and those which relate to other matters, such as the civil rights of individuals; and when they also distinguish between rules and usages which are fixed and settled, because generally observed and regularly applied to recurrent facts, and the particular decisions taken in particular cases. In this sense the Romans may have begun to feel they had a Constitution before they had gone far in the conquest of Italy. Our English ancestors reached the same consciousness in the fourteenth century, when much stress began to be laid upon political precedents, and Parliament, by this time a Representative body, and thereby entitled to speak for the nation, had definitely established its rights as against the Crown¹. The Confirmation of the Charters together with the statute De Tallagio Non Concedendo of A. D. 1297 is often taken as marking the first form of the plainly settled English Constitution, but perhaps the successful resistance of Parliament to King Edward the Third sixty years later is a better point to choose. Anyhow the language of Chief

¹ The history of England illustrates what is here said regarding small and large communities. The Folk Mot of the West Saxons when it passed into the Magnum Concilium of all England, though it remained in theory a Primary Assembly, was practically no longer a meeting of all freemen. It could not have continued to embody and safeguard the constitutional rights of the people but for the later invention of Representation, which made it again a virtually Popular though no longer a Primary Assembly.

Justice Fortescue (under Henry the Sixth) shows how clearly drawn the main lines of the Constitution had become in his time. When this stage has been reached, efforts are sometimes made to give to these constitutional rules, or to certain among them, an exceptional degree of force and permanence. Such rules may be embodied in a document of special sanctity; or they may be protected by oaths. But the creation of a truly Rigid Constitution comes later, when some system of representation has appeared. I shall presently return to examine the causes which produce it.

V. THE STRENGTH AND WEAKNESS OF FLEXIBLE CONSTITUTIONS.

The names 'Flexible' or 'Fluid,' which I have suggested for Constitutions of this type, seem to suggest that they are unstable, with no guarantee of solidity and permanence. They are in a state of perpetual flux, like the river of Heraclitus, into which a man cannot step twice. Not only are new laws constantly passed which more or less affect them, but their mere working tends to alter them daily. Just as every man's character is being every day insensibly modified by the acts he does, by the thoughts he cherishes, by the emotions which each new experience of life brings with it, so every decade saw the Constitution of Rome, and sees the Constitution of England, slightly different at the end of even so short a period from what it was at the beginning. Even a deliberately conservative policy cannot arrest this process of variation. If the change does not for a time appear in the laws, it is in progress in the minds of men, and may have all the more violent a working when it begins to tell upon legislation. A reaction, such as that carried through by Lucius Cornelius Sulla at Rome, or that which followed the fall of the Cromwellian Protectorate in England, is almost as fertile in change as a time of revolution. The past can never be effaced, since the

recollection of it is an element in shaping the future, and the measures taken to restore a *status quo ante* always contain much which was not in that *status quo ante*, much which is in itself new, and the source of further novelties. The only cases in which constitutional development can be said to stop are those where, as at Venice and in some of the cities of post-mediaeval Switzerland, an oligarchy gets control of the government, and, in extinguishing the spirit and the habits of freedom, arrests the natural processes of movement and development until some powerful neighbour overthrows the State, or internal economic changes induce a revolution. Even under a despotism, the system of government changes insensibly from century to century, as it did in the old French monarchy, and as it has recently done among a people so stagnant as the Turks. But despotic systems, being scarcely classifiable as Constitutions, do not come within our present inquiry.

These things being so, it seems natural to assume that Flexible (the so-called 'unwritten') Constitutions, having been enacted and being alterable by the ordinary legislative authority, and not being contained in any specially sacred instrument, will in fact be subject to frequent and large changes, and will moreover be so readily transgressed in practice, that they will furnish an insufficient guarantee for public order and for the protection of private rights.

The facts, however, do not support this assumption. Let us take our two typical instances, Rome and England. The Roman Constitution is an extreme case of a Frame of Government capable of being changed in the quickest and simplest way. Nothing was needed but a vote of the *comitia*, on the proposition of a competent magistrate, accompanied by the silence of the tribunes. No doubt any single tribune could paralyse the action of the *comitia*, but in such a community as Rome became in the later days of the Republic it must often have been easy for those who desired a change

to 'get at,' or to remove, an obnoxious tribune. Yet the Constitution of Rome, regarded on its legal side, changed comparatively little in the three centuries that lie between the Licinian laws and the age of Sulla, for most of those deviations from ancient usage which, as we can now see, were working towards its fall, were in form quite legal, being merely occasional resorts to expedients which the Constitution recognized, though they had been more rarely and more cautiously used in older and better days. So in England, the exercise of the sovereign power is lodged in an assembly which can, on occasion, act with extraordinary promptitude, as when some while ago (April 9, 1883) the Explosives Act was passed through the House of Commons in a few hours (the standing orders having been suspended), and having been forthwith passed by the House of Lords also, received the royal assent next day. So the most sacred rules and principles of the Constitution might with perfect legality of form be abolished—Magna Charta and the Bill of Rights and the Act of Settlement included—just as quickly as the Explosives Act was passed. Yet the main lines of the English frame of government have since 1689 and 1701 remained legally the same; and the most important changes made since the latter year have been effected after long and strenuous controversies¹. We all know how hard it is to secure even small constitutional improvements, such as the abolition of the provision, confessedly useless and certainly troublesome, which obliges a member of the House of Commons to vacate his seat and seek re-election on his being appointed a Minister of the Crown.

One explanation of this apparent paradox is (though sometimes neglected) obvious enough. The stability of any constitution depends not so much on its form as on the social and economic forces that stand behind and support it; and if the form of the constitution corre-

¹ The two most important changes, the Union with Scotland and the Union with Ireland, were, however, among those most quickly carried through.

sponds to the balance of those forces, their support maintains it unchanged. Two other reasons deserve to be more fully stated.

A Flexible or Common Law Constitution sometimes owes its stability to the very conditions which have enabled it to grow out of isolated laws and mere usages into a firmly settled Frame of Government. There have no doubt been many cases, such as those of most of the Greek cities of antiquity, where the eager restless spirit of the people and the violence of faction never allowed any system of government to last long enough to strike deep root. Such constitutions were often enacted all in one piece, and would have been made Rigid, had the citizens who enacted them known how to make them so. They were seldom the growth of long-continued usage. But the best instances of Flexible Constitutions have been those which grew up and lived on in nations of a conservative temper, nations which respected antiquity, which valued precedents, which liked to go on doing a thing in the way their fathers had done it before them. This type of national character is what enables the Flexible Constitution to develop; this supports and cherishes it. The very fact that the legal right to make extensive changes has long existed, and has not been abused, disposes an assembly to be cautious and moderate in the use of that right. Those who have always enjoyed power are least likely to abuse it¹. This truth might be illustrated both from Rome and from England; and, indeed, from Switzerland also, though the argument which tries to prove the stupid conservatism of democracy from the habits of rural communities in the last-named country has been pressed too far by Sir H. Maine and others, since in rural communities, where nearly every one is a citizen, and well off, and most men about equally well off, the usual motives for making political changes do not exist.

A further reason may be found in the fact that a con-

¹ Ἀρχαιοπλούτων δεσποτῶν πολλὴ χάρις, Aesch. *Agam.* 1002.

stitution which has come down in the form of a mass of laws, precedents and customs is not only more mysterious, and therefore more august, to the minds of the ordinary citizens than one they can read in a document, but is not felt by them to lie at their mercy and to live only by their pleasure. A constitution embodied in a document which they have seen drafted, and have enacted by their votes, has no element of antiquity or mystery. It issues from the sovereignty of the people, it reminds them of their sovereignty, it suggests to them nothing more exalted. Perhaps it has been the work of one party in the State; and if that party becomes discredited, it may share the discredit. The dignity which a remote and half mythic origin gives to constitutions, as it does to royal families, was in the ancient world and the Middle Ages enhanced by religious associations. In Greece and Italy the tutelary deities of the city watched over the oldest laws. In mediaeval countries the order of the State seemed an expression of the Will of God. Although these sentiments have vanished from the modern world, the fact that an old constitution represents a long course of progressive development, or, to use a somewhat vulgarized term, of evolution, gives it some claim on the respect of imaginative or philosophical minds. These sources of moral strength have been found sufficient in many countries to secure an enduring life for political institutions which the people, or a legislative body, had it in their power to change, and which, in some instances, ought to have been replaced by other institutions more suited to their altered environment.

It would, therefore, be an error to pronounce Flexible Constitutions unstable. Their true note, their distinctive merit, is to be elastic. They can be stretched or bent so as to meet emergencies, without breaking their framework; and when the emergency has passed, they slip back into their old form, like a tree whose outer branches have been pulled on one side to let a vehicle pass. Just because their form is not rigidly fixed, a temporary change

is not felt to be a serious change. The sentiment of respect for the established order is not shaken. The old habits are maintained, and the machine, modified perhaps in some detail which the mass of the people scarcely notice, seems to go on working as before.

Whether the working is really the same is another matter. During two centuries and a half, from Edward the Third till James the First, the Constitution of England remained in its legal aspect scarcely altered. Though at some moments within that period Parliament seemed to have mightily gained on the Crown, and at others the Crown seemed to be dominating Parliament, yet it was, until the Civil War, doubtful whether any permanent change had been effected. From the days of Queen Anne to those of William the Fourth the Constitution preserved a legal character practically the same. But it had been altered essentially in substance. So we may say that while the Flexible character of a constitution sometimes enables it to recover from shocks without injury, that character sometimes conceals the effects of a shock, since these effects may take the form of changes of usage and changes of opinion among the citizens which have not been expressed, perhaps hardly can be expressed, in a definite legal form. The relations to one another of the two Houses of the British Parliament, and the relations of Parliament to the now self-governing British Colonies, are instances in point.

No constitution illustrates these phenomena better than did that of Rome. It was a complicated piece of work, made of many pieces, firmly attached, yet each piece playing freely. It had to be bent, twisted, stretched in many ways, under the pressure of divers exigencies. But it stood the strain of being bent or stretched, and when the force that had bent it was withdrawn, could return so nearly to its original shape as to seem to have never been disturbed. The change from consuls to military tribunes, the frequent appointment of a dictator, the memorable episode of the Decemvirate, the creation

x 2
of new magistracies, even the admission of new and sometimes large masses of persons to citizenship and voting power, and the adaptation of its old machinery to the new task of governing conquered provinces, did not, during several centuries, permanently disturb its balance or seriously shake its main principles. Suspensions of the ordinary rights of the private citizen, extensions of the ordinary powers of the magistrate, which would have ruined most States by setting dangerous precedents, were at Rome found harmless because law and custom recognized them as expedients available in case of need, and, in legalizing them, took away their revolutionary character. Thus, being parts of the Constitution, though parts to be used only in emergencies, they did not shock conservative sentiment nor encourage attempts pernicious to freedom—did not, that is to say, until at last the character of the city population had so completely changed and the dominions of the Republic had so prodigiously grown that the old Constitution was obviously out of date, unfit for work immensely heavier than that for which it had been constructed.

x 1
A Greek city, or an Italian city of the Middle Ages, which delivered itself into the hands of a dictator when pressed by its neighbours, almost invariably found that it had given itself a master who refused to resign his power when the danger was past, but continued to rule as a Tyrant or Signore. This happened not merely because the people were passionate and the leading men ambitious, for there was plenty both of passion and of ambition among the Romans, but largely because in those cities no provision was made for such emergencies; so that when it became necessary to place extraordinary powers in one or few hands, the Constitution received a violent wrench, from which it might not recover. At Rome the contingency had been foreseen, and the mode of meeting it was legal. A spirit had been formed among the body of the people as well

as among the leading men which held ambition in check. The dictator was not intoxicated by his elevation. The citizens did not lose their faith in the soundness of their system; and it justified their confidence.

The elasticity of the British Constitution appears in somewhat different features, less striking perhaps than those which mark Rome, but not less useful. We English appoint no dictators, seeing that we have always fortunately had a permanent head of the Executive, though latterly one rather nominal than real, and have seldom been exposed to the dangers which the city-states of the ancient world had to fear. But we have kept in reserve a wide and vague prerogative, which, though it cannot in practice be put in force against the will of the representative House of Parliament, may be employed to effect things far more important than many other things for which express legislative authority is required. The control of the army and navy and the control of foreign policy are instances. There are, moreover, ways in which the normal powers of the Executive may be immensely increased. When a statute, such as the Habeas Corpus Act, is suspended, or when a Vote of Credit for a very large sum of money is passed, the control of the ordinary law and courts in the one case, and the control of the House of Commons in the other case, over the Ministers of the Crown, is for the time being (especially if Parliament is not sitting) and for some purposes practically suspended; and the Sovereign (or rather the Cabinet) of to-day is almost replaced in the position of the last Tudor or the first Stuart. Stringent measures to repress disorder may be taken at home, military operations may be threatened or begun abroad which would be beyond the legal competence of the Crown in the former case and its ordinary discretionary powers and functions, as fixed by custom, in the latter. So too when it became necessary in view, not of an emergency, but of the general convenience of administration, to delegate to inferior authorities the supreme legisla-

tive power of Parliament, advantage was taken of the old royal prerogative and of that ancient body the Privy Council. Parliament gave power to the Crown to issue Orders in Council dealing with large classes of matters which must otherwise have been dealt with by statute; and these Orders take effect sometimes at once, sometimes when a certain period has elapsed during which they have lain before Parliament and received from it no disapproval. In this way a vast mass of secondary legislation is annually enacted which, though it does not directly issue from Parliament, carries parliamentary authority, and does not infringe the principle that Parliament is the only true source of law. And, similarly, out of the ancient judicial functions of the Crown and of the Council which advised the Crown, functions which a century ago seemed to be lapsing into desuetude, there has been evolved a new system of judicature. A body called the Judicial Committee of the Privy Council, somewhat resembling the Consistory of the Roman Emperors, has been created, and now acts as a Supreme Court of Appeal for all the transmarine possessions of Britain, whether Indian or Colonial.

The merit of this elastic quality in such Constitutions as the Roman and the British is that it affords a means of preventing or minimizing revolutions by meeting them halfway. Let us note how each kind of Constitution, the Rigid and the Flexible, behaves when a serious crisis arrives, in which one section of the nation is bent on changing the Constitution, and the other on maintaining it. A Rigid Constitution, if the legal means provided for altering it cannot be used for the want of the prescribed legal majority, resists the pressure. It may of course resist successfully, but if so, probably after a conflict which has shaken the State and excited hostility to it in the minds of a large part of the people. It may, however, if the assailing forces are very strong, be broken, and if so, broken past mending. A Flexible Constitution, however, being more easily and promptly

alterable, and being usually a less firmly welded and cohesive structure, can bend without breaking, can be modified in such a way as to satisfy popular demands, can escape revolution by the practical submission of one of the contending forces in the particular dispute, that submission being recognized as a precedent which will be followed, even though it has not been embodied in any law or other formal document. The extinction of the right once claimed by the House of Lords to alter money bills is one instance. Or it may be made to evolve some organ which, though really new, conceals its novelty by keeping some of the old colour, and thus it may continue to work with no palpable breach of continuity. The knowledge that a constitution can be changed without any tremendous effort helps to make a party of revolution less violent and a party of resistance less stubborn, disposing both to some compromise. At Rome the resort to the appointment of military tribunes with consular power when the plebs demanded, and the patricians would not yet consent to the election of a plebeian Consul, delayed revolution till opinion had so changed that the danger of revolution had passed away. So, later, the compromise by which a Praetor was created with the functions of a Consul but with a special range of duties appeased conservative feeling and smoothed the passage from the old order to the new. The history of the English Constitution is a history of continual small changes, no single one of which, hardly even the Bill of Rights at the time of the so-called Revolution, or the Reform Act of 1832, made the system look substantially different. Something no doubt was cut away, and something was added, but the structure as a whole seemed the same, because far more of the old was left than there was added of the new.

The two main processes which have turned the government of England from the monarchy of the Tudors into what may be called the plutocratic democracy of to-day have been the limitation of the royal prerogative and the

transference of the right of suffrage from a few to the multitude. Both processes have gone on slowly, by a succession of steps, each comparatively small, but all in the same direction. Accordingly the strife of parties has been mitigated by the existence at all, or nearly all, moments, of a large body of persons who desired reform, but only a moderate reform. They are the persons who impose compromise on the extremists to the right and to the left of them, and they can do so because the Constitution permits small reforms to be easily effected. The party of change, which would be a party of revolution if it was obliged to have large changes or none, is apt to be divided, and its more moderate section is, or soon passes into, a party only of reform. The English Chartists of 1840-50 caused some alarm. But between them and the old Constitutional Whigs there were several sections of opinion passing by imperceptible gradations into one another; and when it was seen that the current was setting towards changes approximating to those which the Chartists demanded, their less violent men were by degrees reabsorbed into the general body of the Whig or Liberal party, the latter at the same time moving with the times; and some of those changes, in particular vote by ballot, were ultimately obtained with no great friction.

It must nevertheless be remembered that in the history of most States a crisis is apt to arrive when elasticity becomes a danger, in that it tempts people to abuse the facility for change. There is no better sign of strength in a man's physical constitution than his being able to make some short, sudden, and violent effort without suffering afterwards from doing so; and there is nothing of which the happy possessor of such strength is more proud. But those men who have reached middle life are aware that the temptation to strain one's strength in this exultant spirit is perilous. Repeated impunity is apt to encourage a man to go on trying experiments when the conditions are perhaps less favourable, or when the re-

serve of force is less abundant than it was in youth. The story goes that the famous Milo of Croton, passing alone through a forest, saw an oak into which woodmen who were preparing to fell it had driven wedges. Pulling out the wedges, he tried to rive it asunder. But he had no longer the fullness of his youthful strength. The returning tree caught him by the hands and held him fast till he died. In our own days Captain Webb, stimulated by his feat in swimming across the English Channel, sought still bolder exploits, and perished in the Whirlpool Rapid below Niagara Falls. So the Romans, having many a time given exceptional powers for special occasions to their magistrates, found at last that they had created precedents which enabled the old free Constitution to be in substance overthrown. Sulla became a dictator of a new kind. After a while he resigned his power, but the example showed that monarchy was not far off. Julius Caesar also received exceptional authority, and used it to form an army which extinguished the Republic. The dictatorship he had held passed under other forms into permanent absolutism, and what was practically a revolution was ultimately carried through with a certain deference to the old constitutional forms. In England, Parliament, during the sixteenth century, once or twice gave powers to the Crown which brought the Constitution into danger. In the seventeenth century the monarchy was abolished, and a Protectorate set up by revolutionary methods. This was the result of a war which had destroyed a vital part of the old machine, much to the regret of most of those who had in the first instance taken up arms. We have never since that date (except under King James the Second) seen the Constitution in any real danger.

It is, however, often suggested that the enormous power possessed by Parliament might be used to upset fundamental institutions with reckless haste, and that it might therefore be prudent to impose restrictions on parliamentary action. And those who note the way in

which Parliament bends and staggers under the increasing burden of work laid on it, coupled with the inadequacy of its rules to secure the prompt dispatch of business¹, have frequently predicted that the House of Commons may one day deliver itself into the hands of the Cabinet, the power of party organization having grown so strong that the head of each Cabinet will be deemed a sort of dictator, drawing his authority, nominally of course, from the House of Commons, but really from a so-called direct 'mandate' of the electors². Others draw a yet more horrible picture of a party machine, which they call the Caucus, dictating a policy to the electors on the one hand, and to the Cabinet on the other, itself reigning in the spirit of a tyrant, but under the forms of the Constitution. If the British Constitution, as we have hitherto known it, should perish, there is little reason to fear it will do so in this eminently ignoble fashion³.

When Flexible Constitutions come to an end, they do so in one of two ways. Sometimes they pass into an autocracy, either dying a violent death by revolution, or expiring in a more natural manner through the extension and development, under legal forms, of one of their organs, to a point at which it practically supersedes and replaces the other organs. Sometimes, on the other hand, they pass into Rigid Constitutions. The causes which induce this latter change belong,

¹ This was written in 1884. Since that year sweeping changes have been made in the procedure of the House of Commons which have greatly curtailed the rights and opportunities of private members while increasing the powers of the Ministry of the day. They have not, however, made that House able to discharge all or nearly all the work that falls on it; and it is becoming (under the new rules) less and less careful in the exercise of its powers of voting money.

² This apprehension was often expressed between 1880 and 1885. Nothing has occurred since to justify it so far as the dictatorship of any single person is concerned; and it may have in great part arisen from the fact that from 1867 to 1885 the headships of both the two great parties had been vested in exceptionally vigorous and influential leaders. There can however be no doubt that the power of the Cabinet as against the House of Commons has grown steadily and rapidly: and it appears (1902) to be still growing.

³ Of this supposed danger also much less is heard now than in 1884. The thing that was then called the 'Birmingham Caucus' has ceased to be used to terrify the timid.

however, to the examination of that second type of Constitution; and will be considered when we have surveyed some further features characteristic of the Flexible type.

VI. ARISTOCRACIES AND FLEXIBLE CONSTITUTIONS.

Flexible Constitutions have a natural affinity for an aristocratic structure of government. I do not mean merely that they spring up at times when power is in the hands of the well-born or rich, for the stage of society in which constitutions, properly so called, begin to exist, is nearly always oligarchic, even if there be a monarch at the head of it. But there is a sort of natural attraction between an aristocracy and an undefined and elastic form of government, as there has begun to be, in most modern countries, a natural repulsion between such a form and a pure democracy. It needs a good deal of knowledge, skill and experience to work a Flexible Constitution safely, and it is only in the educated classes that these qualities can be looked for. The masses of a modern nation seldom appreciate the worth of ancient usages and forms, or the methods of applying precedents. In small democratic communities, such as are the Forest Cantons of Switzerland, this attachment to custom may be found, because there traditions have passed into the life of the people, and the maintenance of ancient forms has become a matter of local pride. But in a large nation it is only educated men who can comprehend the arrangements of a complicated system with a long history, who can follow its working, and themselves apply its principles to practice. The uninstructed like something plain, simple and direct. The *arcana imperii* inspire suspicion, a suspicion seldom groundless, because the initiated are apt to turn a knowledge of secrets to selfish purposes. Now a Common Law Constitution with its long series of precedents, some half obsolete, some of doubtful interpretation, is full of *arcana*. Even to-day, though the process of clarification and simplification has gone on fast

since 1832, dark places are still left in the British Constitution.

There is, however, a further reason why Common Law Constitutions accord better with aristocratic than with democratic sentiment. They allow a comparatively wide discretion to the chief officials of State, such as the higher magistrates at Rome and the Ministers of the Crown in England. The functions of these officials are not very strictly defined, because legal enactments, though they limit power in certain directions (far more rigidly now in England than was the case at Rome), do not draw a completely closed circle round it, but leave certain gaps, through which tradition and precedent permit it, so to speak, to shoot out and play freely. Aristocracies prize this latitude. They prize it because it is mainly to prominent members of their class that offices fall, and these persons are then able to act with freedom, to assert their individual wills, to carry out their views unchecked by the dread of transgressing a statute. On the other hand, the less conspicuous members of the upper class have at any rate little reason to fear harm from the wide authority of the officials, because their social position, and the influence of their family connexions, protect them from arbitrary treatment. The masses of the people have neither advantage. Very few of them can hope to enjoy power. Any one of them may suffer from an exercise of it, which, because not positively illegal, gives him no claim for redress. They have, therefore, everything to gain and nothing to lose if they can restrict it by those definite and fixed limitations which are congenial to Rigid rather than to Flexible Constitutions. And in the history of most peoples a time arrives when, the love of equality being reinforced by the distrust of authority, there is a movement to cut down the powers of the rulers to the lowest point compatible with the safety of the State. The extent to which this process has gone is in any nation a fair test of the gains made by the democratic principle upon the aristo-

cratic. But in this respect the course things have taken in England has been very unlike that which they took at Rome. One of the first events which the authentic history of Rome records is the effort of the plebeians to secure a limitation of the power of the Consuls by having statutes passed to define it. The effort failed. It is characteristic of the Romans that it should have failed. Statutes, known afterwards as the Laws of the Twelve Tables, were enacted, statutes which doubtless on the whole improved the position of the plebeians. But the powers of the Consuls remained wide and legally indefinite down till the time when life went out of them under the shadow of an autocrat who ruled for life. Limited of course these powers had to be as time went on and the popular element in the constitution was developed, but the limitations were imposed, not by narrowing the powers themselves, but by the introduction of new factors. The two Consuls, being chosen from a circle less narrow than in the old days, were more frequently at variance with one another. Other officials were set up over against the Consuls, who could (if they pleased) interfere to restrain the Consuls. And thirdly, the permanent non-representative Council of Elders (the Senate), composed mainly of ex-officials, increased its influence, and could generally hold the magistrates in check. Things went very differently in England. There the prerogative of the Crown was the force of which the nobles as well as the commons stood in dread, and they united in the effort to restrict it down till a time when the commons were strong enough to dispense with the help of more than a section of the landowning magnates. In steadily reducing the prerogative of the Crown, in lopping off some parts of it and strictly defining others, they restricted the powers of the Crown and its Ministers, until at last they had so firmly established the right of the representative assembly to prescribe to the Crown what persons it should employ as Ministers that the old motive for limiting the prerogative vanished. Those who had been

feared as masters were now trusted as servants. The people no longer disliked what was left of the royal prerogative, because their representatives could control the persons who wielded it, and the members of the ruling assembly began to feel that it was in the public interest, and not against their own personal interest, to maintain the powers of Ministers, because many things could be done more easily and more promptly through these powers than by the passing of statutes for dealing with each matter in detail. There may even be a danger, in this new condition of things, that the royal prerogative will be used too freely, because that prerogative now means the will of the leaders of the parliamentary majority, whose action might at a moment of excitement be applauded and sustained by their followers even should it transcend the limits fixed by constitutional usage.

It has been already remarked that the system of checks in the Roman Constitution differed essentially from that employed in the English. Every constitution must of course have a system of checks, else it will quickly perish, or, to vary the metaphor, it must so dispose the ballast as to enable the vessel to recover her equilibrium after a violent oscillation. At Rome the checks consisted in the coexistence of various magistrates who could arrest one another's action, and in a permanent Senate with a large though somewhat ill-defined control, while the popular assembly, in theory omnipotent, was in fact restrained by a number of curious features in its procedure which made it much less effective than was the primary popular assembly in most of the Greek republics. It could act only when convoked by a magistrate, could have its action stopped by another magistrate, and was frequently overreached or circumvented by the Senate. In England, on the other hand, the Crown, which before the conflicts of the seventeenth century had been the predominant power which needed to be checked, and which frequently was checked, by Parliament, becomes after that time capable only of occasionally baffling (and

that less and less as time went on) the now predominant Parliament, while the restraint on hasty or violent action by Parliament was found, partly in the division of Parliament into two Houses, and partly, especially after the Upper House had begun to lose moral weight, and had passed more and more under the control of one party in the State, in the fact that an assembly of representatives, nearly all of whom belonged to the wealthier and so-called upper classes, was pervaded by a conservative temper. A representative body, the members of which are mostly satisfied with the world as it is, and who are sufficiently instructed to respect the traditions of administration, is, except where a question arises which stirs class passions, less prone to ill-considered action than is an assembly of all the citizens, such as was the Ecclesia of Athens or Syracuse, where the large majority were humble folk, and where the sympathy of numbers made the ascendancy of emotion over reason doubly dangerous. Thus, as compared with the democracies of the city-states of antiquity, the representative character of the assemblies of modern Europe has been a moderating factor. But these assemblies are now changing their character, as the countries in which they exist have changed. The progress of science has, through the agency of railways and telegraphs, of generally diffused education, and of cheap newspapers, so brought the inhabitants of large countries into close and constant relations with one another and with their representatives, that the conditions of a small city-state are being reproduced. A man living at Kirkwall knows what happened last night in London, eight hundred miles away, sooner and more fully than a man living in Marathon (distant eight hours' walking) knew what had happened the day before in Athens. The same news reaches all the citizens at the same time, the same emotion affects all simultaneously, and is intensified by reverberation through the press. The nation is, so to speak, compressed into a much smaller space than it filled three centuries ago, and has

become much more like a primary assembly than it was then. If concurrently with this change there should come, as some presage, a closer and more constant control of the members of the representative assembly by their constituents, the representatives becoming rather delegates acting under instructions than men chosen to speak and vote because they are deemed trusty and intelligent, much of the moderative value which the representative system has possessed will disappear.

It need not be thought that in England at least there is any immediate risk of evils to be expected from the change which has been noted. Representatives have not yet become delegates, and if they do, it will be rather their own fault than that of the electors, for the electors respect courage and value independence. In England the power of party organizations over constituencies and members, if it grows, grows slowly. It is, in fact, not so much these organizations as small sections of opinion or organized 'interests,' seeking some advantage for themselves, that try to terrorize candidates. There is still a valuable check on possible recklessness on the part of Parliament in the fact that it is (unlike some popular assemblies) guided by responsible Ministers, who have hitherto seldom been mere demagogues, and who have experience behind them, prospects of future dignity before them, and the opinion of their own class around them. All that I wish to point out is that a change has passed on the conditions under which representative assemblies act, which in making them more swiftly responsive to public sentiment, increases some of the risks always incident to popular government. History has not spoken her last word about Flexible Constitutions. Rather may she be opening a new stage in their development.

VII. THE INFLUENCE OF CONSTITUTIONS ON THE MIND OF A NATION.

We have been considering what are the conditions present in a nation which make it prefer a particular kind of constitution. Now let us approach the converse question, and inquire what will be the influence on the political ideas and habits of a nation of these Constitutions of the Common Law, or Flexible type, and what are the features of national character which will enable such constitutions to live on and prosper.

Forms of government are causes as well as effects, and give an intellectual and moral training to the peoples that live under them, as the character of a parent affects the children of the household. Now the Common Law Constitution, with its complexity, its delicately adjusted and balanced machinery, its inconsistencies, its *nuances*—one is driven to French because there is no English word to express the tendency of a tendency—its abundance of unsettled points, in which a refined sense can perceive what the decision ought in each case to be without being able to lay down a plain and positive rule—such a constitution must undoubtedly polish and mature in the governing class a sort of tact and judgement, a subtlety of discrimination and a skill in applying old principles to new combinations of facts, which make it safe for a people to leave wide powers to their magistrates or their governing assembly. A sense grows up among those who have to work the constitution as to what is and is not permissible under it, and that which cannot be expressed in the stiff phrases of a code is preserved in the records of precedents and shines through the traditions which form the minds of the rulers. This kind of constitution lives by what is called its Spirit. ‘The letter killeth, but the spirit giveth life.’

Evidently, however, it is only among certain nations with certain gifts that such a constitution will come to

maturity and become a subject for science as well as a work of art. Three things seem needful. One is legal-mindedness, a liking and a talent for law. Another is a conservative temper, by which I mean the caution which declines to make changes save when a proved need for change arises, so that changes are made not suddenly, but slowly and bit by bit. The third is that intellectual freshness and activity which refuses to be petrified by respect for law or by aversion to change. It is only where these three qualities are fitly mixed or evenly balanced that either a great system of law or a finely tempered and durable constitution can grow up. Many otherwise gifted peoples have, like the Athenians in ancient and, *longo intervallo*, the Spaniards in modern times, wanted one or other of these qualities, and have therefore failed to enrich the world by law or by constitutions. Perhaps it was partly owing to their possessing other gifts, scarcely compatible with these, that the Athenians did fail.

But although, when a nation has reached the point at which its law begins to be scientific, the law and the constitution become teachers, it must be remembered that the training they give is mainly given to the classes which practise law and administer the State. For though a nation as a whole may come to understand and appreciate in outline its constitution, and may attain to a fairly correct notion of the functions of each organ of government, only a comparatively small section comprehends the system well enough to work it or to criticize its working. For such comprehension there is needed not only some knowledge of history but also close and continuous observation of the machinery in motion, and either participation in the business of governing or association with those who are carrying on that business. The mass of the nation cannot be expected to possess this familiarity. They are like the passengers on board an ocean steamer, who hear the clank of the engine and watch the stroke of the piston and admire the

revolution of the larger wheels, and know that steam acts by expansion, but do not know how the less conspicuous but not less essential parts of the machinery play into the other parts, and have little notion of the use of fly-wheels and connecting-rods and regulators. They can see in what direction the vessel is moving, and can conjecture the rate of speed, but they must depend on the engineers for the management of boilers and engines, as they do on the captain for the direction of the ship's course. In the earlier stages of national life, the masses are usually as well content to leave governing to a small upper class as passengers are to trust the captain and the engineers. But when the masses obtain, and feel that they have obtained, the sovereignty of the country, this acquiescence can no longer be counted on. Men without the requisite knowledge or training, men who, to revert to our illustration, know no more than that steam acts by expansion and that a motion in straight lines has to be turned into a rotary one, men who are not even aware of the need for knowledge and training, men with little respect for precedents, and little capacity for understanding their bearing, may take command of engines and ship: and the representative assembly may be filled by those who have no sense of the dangers to which an abuse of the vast powers of the assembly may lead. If such a change arrives, it imposes a severe strain on the constitution; and that elasticity which has been its merit may prove its danger.

It may accordingly be said that one of three conditions is generally necessary for the salvation of a Flexible Constitution. Either (1) the supremacy must remain in the hands of a politically educated and politically upright minority, or (2) the bulk of the people must be continuously and not fitfully interested in and familiar with politics, or (3) the bulk of the people, though legally supreme, must remain content, while prescribing certain general principles, to let the trained minority manage the details of the business of governing. Of these conditions

the first has disappeared from nearly all civilized countries. The second has always been rare, and in large industrial countries is at present unattainable. The best chance of success is therefore to be found in the presence of the third; but it needs to be accompanied by a tone and taste and sense of public honour among the people which will recoil from the mere demagogue.

Both the influence of its constitution upon a nation and the need of certain qualities in order to work a Flexible Constitution are well illustrated in the history of the Roman commonwealth. Of all famous constitutions it was the most flexible. It lived long and overcame many perils because it grew up among a people who possessed in an eminent degree the three qualities of legalmindedness, of conservatism, and of keen practical intelligence. It trained the national mind to a respect for order and legality, and had doubtless much to do with the forming of that constructive genius which created the whole system of Roman private law. It fell at last because the mass of the citizens became unfit to discharge their function in the scheme. They did not, it is true, press into the inner circle of the governing class. The success first of the well-born and then of the rich in keeping the offices in their own hands all through is one of the most remarkable features of Roman history. But they were corrupt and reckless in the bestowal of power, and had really ceased to care for the freedom and welfare of the State. The ruling classes, on the other hand, were tempted by the demoralization of the masses to be their corrupters, and lost their old respect for legality. Even a conscientious philosopher like Cicero did not scruple to put prisoners to death without trial, and to justify himself by citing an act of lawless violence done four centuries before. The leading Romans of that day were as fit as ever to work the system, so far as skill and knowledge went, but they had not the old regard for its principles, nor the old sense of public duty; and the prizes which office offered now that Rome was mistress of the

world were too huge for average virtue to resist. The moral forces which had enabled the Roman Constitution to work in spite of its extraordinary complexity, and to live, in spite of the risks to which its own nature exposed it, were now fatally enfeebled. These abuses of power on the one hand, and on the other hand the deadlocks which the system of checks caused, grew more frequent and serious. Each successive wrench which the machine received became more violent, because neither faction had patriotism enough to try to ease them off, and so break the force of the shock. From the beginning of the Republic the chief danger had lain in the immense powers vested in the magistrates. These powers had been necessary, because the State was constantly exposed to attacks from without; and nothing but the sense of devotion to the interests of the State had controlled the party spirit which rages more fiercely within the walls of a city than it does in a large and scattered community. Now that Rome had vast dominions to rule, and now that her frontiers extended to the very verge of civilization, involving her in long wars with great monarchies or groups of tribes on those frontiers, large powers had to be entrusted to military chiefs, and entrusted for long periods. Thus the Republican constitution fell through the very faults which had always lain deep in its bosom, though an over-mastering patriotism had in earlier days kept them harmless.

It is never easy, in studying the history of an institution, to determine how much of its success or its failure is due to its own character, how much to the conditions, external and domestic, in the midst of which it has to work. The fortunes of the Roman Constitution would doubtless have been different had Rome been less pressed by foreign enemies in her earlier days, or had she been less of a conquering power in her later. So too it is hard to compare States so different as Rome—whose Constitution was always that of a City, and failed to widen itself so as to become a Constitution for Italy—

and England, whose Constitution has always since the days of Ecghbert and Alired been that of a large and originally a rural and scattered community. If, however, the comparison is attempted, we may observe that England never, after the fourteenth century, recognized such vast powers in the Crown (whether in the Crown personally or as exercised by its Ministers) as Rome granted to her magistrates. In the sphere of public law England has applied more successfully than Rome did the conception of the inviolability of the rights of the citizen as against the organs of the State, although that conception is itself Roman. With all their legal genius the Romans were too much penetrated by the idea of the necessary amplitude of State power to fix just limits to the action of the Executive. When it was necessary to provide for checking a magistrate, they set up another magistrate to do it, instead of limiting magisterial powers by statute. Nor did they ever succeed as the English have done in disengaging the judicial from the executive department of government. In both these respects part of the merits of the English Constitution may be ascribed to Norman feudalism, whose precise definition of the respective rights of lord and vassal—all the lords but one being also vassals, and the greater vassals being also lords—helped to form and imprint deep the idea that powers, however strong within a definite sphere, may be strictly confined to that sphere, and that the limits of the sphere are fit matter for judicial determination. Perhaps the existence in the clergy of a large class of men enjoying specific immunities the exact range of which had to be settled, and, where possible, judicially settled, may have also contributed to train this habit of mind. The extent to which England, favoured no doubt by her insular position, was able to secure domestic freedom while leaving a large discretionary authority to the Crown, is usually credited to the rise of the House of Commons and the vigilance of its control. But much is also to be ascribed to that precise

X definition of the rights of the individual which has made life and property secure from injury on the part of the State, to the habit of holding officials liable for acts done in excess of their functions, and to that ultimate detachment of the judiciary from the influence of the Crown which has enabled the individual to secure by legal process the enforcement of his rights. These principles have sunk deep into the mind of the nation, and have been of the utmost service in forming the habits of thought and action by which free constitutions have to be worked. They are just as strong as if they were embodied in a Rigid Constitution, instead of being legally at the mercy of Parliament. But that is because they have centuries of tradition behind them, and because the English are a people who respect tradition and have been trained to appreciate the value of the principles which their ancestors established.

VIII. CAPACITY OF CONSTITUTIONS FOR TERRITORIAL EXPANSION.

One point more remains to be mentioned before we quit constitutions of the Flexible type, viz. their suitability to a State which is expanding its territory and taking in other communities whether by conquest or by treaty.

Such constitutions seem especially well suited to countries which are passing through periods of change, whether internal or external. When new classes of the population have to be admitted to share in political power, or when the inhabitants of newly-acquired territories have to be taken in as citizens, this is most quickly and easily effected by the action of the ordinary legislature. Both Rome and England availed themselves of this flexibility in the earlier stages of their growth. England, itself created as a State by the expansion of the West Saxons, enlarged herself to include Wales with no disturbance of her former Constitution, and

similarly fused herself with Scotland in 1707 and with Ireland in 1800, in both cases altering the Constitution of the enlarged State no further than by the admission of additional members to the two Houses of Parliament, and by the suppression of certain offices in the smaller kingdoms. The ease with which the earlier expansions were effected may be attributed to the fact that in mediaeval times the prominence of the king made the submission of any tribe or territory to him carry with it the incorporation of that tribe or territory into his former dominions. The popular assembly of a community, such as were the South Saxons, for instance, sank into a secondary place as soon as the king was head of the South Saxons as well as of the West Saxons, for the council of the united people which he summoned and over which he presided became the national assembly for all his subjects. In later times, though Scotland and Ireland had their separate Parliaments, these could be readily united with that of England, because in all three countries the popular House was representative. Here, however, England has stopped. The vast dominions which she possesses beyond the oceans, while legally subject to her Crown and Parliament, have not been brought into the constitutional scheme of the motherland. Indeed they could hardly be brought in without a reconstruction of the present frame of government, which would probably have to be effected by the establishment of a Rigid Constitution.

Similarly the Roman State had its first beginnings in the union of neighbouring tribes, whose popular assemblies coalesced into one assembly. As time went on, the flexibility of the constitution permitted the extension of political rights to a number of communities which had lain outside the old Roman territory. But the process presently stopped (so far as effective political expansion was concerned), because the representative system had not yet been invented. When after the great revolt of the Allies in B. C. 90 Rome was compelled to grant full

citizenship to a large number of Italian communities, she did not take what moderns might think the obvious course of creating a representative assembly to which these allied communities might send elected delegates, but merely distributed the new citizens among her old tribes, an expedient which so far improved the position of the Allies that they became legally equal to Roman citizens, and acquired thereby various privileges and exemptions, but which extended to them practically no share in the government, since few could not come to Rome to give their votes in the assembly of the people. It may well have been that neither the oligarchs nor the leaders of the so-called popular party at Rome were willing to resign a substantial part of the power of the inhabitants of the City, with the opportunities of bribing and being bribed, in exchange for the primacy of a Federal or quasi-Federal Italian republic. But that the notion of a representative assembly had not crossed men's minds appears from the circumstance that the Italian Allies themselves, when in the course of their struggle they set up a rival government, merely reproduced the general lines of the Roman constitution, and did not create any representative council, excellently as it might have served their purpose. So strong was the influence of the idea of the city community in the ancient world, and (it may be added) so little power of invention do mankind display in the sphere of political institutions.

When an expanding State absorbs by way of treaty other communities already enjoying a government more or less constitutional, the process now usually takes the form of creating a Federation, and a Federation almost necessarily implies a Rigid Constitution. Cases where the Flexible Constitution of one State is stretched to take in another (as the Constitution of England was stretched to take in Scotland) are rare. The ancient Romano-Germanic Empire had a Flexible Constitution, which, already in an advanced stage of decay, was extinguished by Napoleon. When it was desired to re-

establish a German Empire out of a number of practically independent States, this had to be done by the creation of a federal system under a Rigid Constitution. No similar device was required in the case of Italy, because the communities which united themselves to the kingdom of Sardinia between 1859 and 1871 had not theretofore enjoyed constitutional government, had just dismissed their whilome sovereigns, were all eager for union, and in their eagerness for union cared but little for the maintenance of any local rights.

IX. THE ORIGIN OF RIGID CONSTITUTIONS.

We may now pass on to examine the other type of constitution, that for which I have suggested the name Rigid, the specific character whereof resides in the fact that every constitution belonging to it enjoys an authority superior to the authority of the other laws of the State, and can be changed only by a method different from that whereby those other laws are enacted or repealed. This type is younger than the Flexible type. The latter goes back to the very beginning of organized political societies, being the first form which the organization of such societies took. Rigid Constitutions, on the other hand, mark a comparatively advanced stage in political development, when the idea of separating fundamental laws from other laws has grown familiar, and when considerable experience in the business of government and in political affairs generally has been accumulated. Thus they have during the last hundred years been far more in favour than constitutions of the Flexible type.

In Europe they exist in every constitutional country except the United Kingdom, Hungary, and Italy. There are none in the Asiatic continent, but Asia, the cradle of civilization, possesses no constitutional self-governing State whatever, except Japan, the Constitution of which, established in 1889, bears some resemblance to that of

the German Empire. America, as a new continent, is appropriately full of them. The Republic of the United States has not only presented the most remarkable instance of this type in the modern world, but has by its success become a pattern which other republics have imitated, just as most modern States in the Old World took England for their model when they established, during the nineteenth century, governments more or less free. The Constitutions of all the forty-five States of the Union are Rigid, being not alterable by the legislatures of those States respectively. This is also true of the Constitution of the Dominion of Canada, which is alterable only by the Imperial Parliament. The Constitutions of the seven Canadian Provinces might, so far as their legislatures are concerned, be deemed Flexible, being (except as respects the office of Lieutenant-Governor) alterable by ordinary provincial statutes, but as all Provincial statutes are subject to a Dominion veto, they are not within the sole power of the legislatures. Mexico and the five republics of Central America, together with the nine republics of South America, have all adopted Constitutions which their legislatures have not received power to change. Africa is the most backward of the continents, but she has in the Orange Free State a tiny republic living under a Rigid Constitution. It has been contended that the Constitution of the South African Republic (Transvaal) is referable to the same category, but it is really *de iure*, and it has always been treated *de facto*, as being a Flexible Constitution¹. The Constitutions of the Australasian colonies present legal questions of some difficulty, owing to the way in which the imperial Acts creating or confirming them have been drawn. So far as the method of changing these Constitutions has been prescribed by statutes of the colonies in which they exist, it would appear that each can also be changed by the legislature of the colony. Where those methods, however, are prescribed by the British Parliament, or by

¹ See Essay VII, p. 378.

instruments issuing from the Crown, the point is more doubtful, and would need a fuller discussion than it can receive here. Questions, however, touching the relations of a legally subordinate to a legally supreme legislature lie in a different plane, so to speak, from that with which we are here concerned: and we may say that if these colonial constitutions are regarded solely as respects the legislatures of the colonies themselves, they are referable to the Flexible type. As to the new Federal Constitution of Australia there is no doubt at all. It is Rigid¹, for any alteration in it requires a majority of the States and a majority of the direct popular vote. All the acts of every British colony are subject to a power of disallowance by the Governor or the Crown, but (although it is sometimes provided that constitutional acts shall be 'reserved' for the pleasure of the Crown) this power is not confined to acts changing the constitution, conformably to the English habit of drawing little distinction between constitutional and other enactments.

All the above-mentioned constitutions are products of the last century and a quarter, and it is doubtful whether there existed in A. D. 1776 any independent State the constitution of which the ruling authority of that State could not have changed in the same way in which it changed its ordinary laws. The Swiss Confederation does not come into question, for that Confederation was, until the French laid hands on it in the last years of the eighteenth century, a League of States rather than a State, and could not be said to have any constitution in the proper sense, not to add that the republics of which the league consisted could alter the terms of their league in the same way in which they had formed it. The same remark applies to the confederation of the seven United Provinces of the Netherlands.

The beginnings of Rigid Constitutions may, however,

¹ See as to this Constitution Essay VIII, p. 391. As to the Constitutions of the several Australia and other British colonies, reference may be made to the book of the late Sir Henry Jenkyns, entitled *British Rule and Jurisdiction beyond the Seas*, the publication of which is announced for a very early date.

be traced back to the seventeenth century. The first settlers in the British colonies in North America lived under governments created by royal charters which the colonial legislatures could not alter, and thus the idea of an instrument superior to the legislature and to the laws it passed became familiar ¹. In one colony (Connecticut) the settlers drew up for themselves in 1638 a set of rules for their government, called the Fundamental Orders. These Orders, developed subsequently into a royal charter, were really a rudimentary constitution. And almost contemporaneously the conception appeared in England during the Civil War. The Agreement of the People, presented to the Long Parliament in 1647, contains in outline a Frame of Government for England which was meant to stand above Parliament and be not changeable by it. So Oliver Cromwell sought by his Instrument of Government, promulgated in 1653, to create a Rigid Constitution, some at least of whose provisions were to be placed beyond the reach of Parliament, and indeed apparently to be altogether unchangeable. But his own Parliament refused to recognize any part of it as outside their right of interference ².

From this rapid geographical survey we may now return to examine the circumstances under which constitutions of this type arise. Their establishment is usually due to one or more of the four following motives:—

(1) The desire of the citizens, that is to say, of the part of the population which enjoys political rights, to secure their own rights when threatened, and to restrain the action of their ruler or rulers.

(2) The desire of the citizens, or of a ruler who wishes to please the citizens, to set out the form of the pre-existing system of government in definite and positive terms precluding further controversy regarding it.

¹ Observations on this topic may be found in the author's *American Commonwealth*, chap. xxxvii.

² These documents are printed in Dr. S. R. Gardiner's *Constitutional Documents of the Puritan Revolution*. A concise account of the Instrument may be found in Mr. Goldwin Smith's *United Kingdom*, vol. i. pp. 605-8.

(3) The desire of those who are erecting a new political community to embody the scheme of polity under which they propose to be governed, in an instrument which shall secure its permanence and make it comprehensible by the people.

(4) The desire of separate communities, or of distinct groups or sections within a large (and probably loosely united) community, to settle and set forth the terms under which their respective rights and interests are to be safe-guarded, and effective joint action in common matters secured, through one government.

Of these four cases, the two former arise where an existing State changes its constitution. The two latter arise where a new State is created by the gathering of individuals into a community, or by the union of communities previously more or less separate into one larger community, as for instance by the forming of a Federation.

Note further that Rigid Constitutions arise in some one of four possible ways.

1. They may be given by a monarch to his subjects, in order to pledge himself and his successors to govern in a regular and constitutional manner, avoiding former abuses. Several modern European constitutions have thus come into being, of which that of the Kingdom of Prussia, granted by King Frederick William the Fourth in 1850, is a familiar example. The *Statuto* or Fundamental Law of the Kingdom of Sardinia, now expanded into the Kingdom of Italy, was at one time deemed another instance. It is now, however, held to be a Flexible Constitution. Magna Charta would have been a fragment of such a constitution had it been legally placed out of the possibility of any change being made in it by the Great Council, then the supreme legislature of England, but it was enacted by the king in his Great Council, and has always been alterable by the same authority. The *Charte Constitutionnelle* for France issued by Louis the Eighteenth in 1814, and renewed in an

altered form on the choice of Louis Philippe as king in 1830, and the Constitutions granted by their respective kings to Spain and to Portugal, are similar instances.

2. They may be created by a nation for itself when it has thrown off (or been released from) its old form of government, and desires to create another entirely *de novo*. The various Constitutions of the various French Republics from 1790 downwards are instances, as is the Constitution of the Orange Free State¹ and the present (A. D. 1901) Constitution of Brazil. To this category also belong the Constitutions of the original thirteen States of the American Union. Two of these States, however, were content to retain the substance of the charter-constitutions under which they had lived as British Colonies, merely turning them into State constitutions, with nothing but the Confederation above them, that Confederation being then a mere League and not a National Government. The Constitution of the Austrian part of the Austro-Hungarian monarchy may also be referred to this category. It consists of five Fundamental Laws, enacted in 1867, and alterable by the legislature only in a specially prescribed manner.

3. They may be created by a new community, not theretofore a nation, when it deliberately and formally enters upon organized political life as a self-governing State, whether or no as also a member of any larger political body. Such are the Constitutions of the States of the American Union formed since 1790. Such was the original Constitution of Belgium, a country which had been previously a part of the Kingdom of Holland. Such is the Constitution of the Dominion of Canada, though it is a peculiar feature of this instrument—and the same is true of the Constitutions of all the self-governing British Colonies—that it has been created not by the community which it regulates but by an external authority, that of the Parliament of the United Kingdom, in a statute of A. D. 1867. Being unchange-

¹ See Essay VII, p. 361.

able by the Dominion Legislature, it is a Rigid Constitution within the terms of our definition, although changeable, like any other statute, by the British Parliament. The new Federal Constitution of Australia belongs to the same class and had a like origin¹.

4. They may arise by the tightening of a looser tie which has theretofore existed between various self-governing communities. When external dangers or economic interests have led such communities to desire a closer union than treaties or federative agreements have previously created, such communities may unite themselves into one nation, and give that new nation a government by means of an instrument which is thereafter not only to hold them together but to provide for their action as a single body. This process of turning a League of States (*Staatenbund*) into a Federal State (*Bundesstaat*) is practically certain to create a Rigid Constitution, for the component communities which are so uniting will of course desire that the rights of each shall be safeguarded by interposing obstacles and delays to any action tending to change the terms of their union, and they will therefore place the constitution out of the reach of amendment by the ordinary legislature. Cases may, however, be imagined in which the component communities might be willing to forego this safeguard. The Achaean League did so; and its constitution was therefore a flexible one, but then the Achaean League can hardly be said to have been a single State in the strict sense of the word. It was rather a league, though a close league, of States, like the Swiss Confederation in the eighteenth century.

The most familiar instances of this fourth kind of origin are the United States of North America, the Federation of Mexico (unless it be referred to the second class), and the present Swiss Confederation. To this

¹ As to this Constitution see Essay VIII. Unlike the Constitution of Canada, it can be amended by the people of Australia without the aid of the Imperial Parliament.

class may also be referred the very peculiar case of the new German Empire, which by two steps, in 1866 and in 1871, has created itself out of the pre-existing Germanic Confederation of 1815, that Confederation having been formed by the decay into fragments of the ancient East Frankish or German kingdom, which had, throughout the Middle Ages, a Flexible Constitution resembling that of the England or France or Castile of the thirteenth century.

X. THE ENACTMENT AND AMENDMENT OF RIGID CONSTITUTIONS.

Before proceeding to consider the methods by which these constitutions may be enacted and changed, it is worth while to suggest an explanation of their comparative recent appearance in history. Documentary constitutions, *i.e.* those contained in one or several instruments prepared for the purpose, are old. There were many of them in the Greek cities; and efforts were sometimes made when they were enacted to secure their permanence by declaring them to be unchangeable. But in the old days when City States (and sometimes also small Rural States) were ruled by Primary Assemblies, consisting of all free citizens, there was no authority higher than the legislature that could be found to enact a constitution, seeing that the legislature consisted of the whole body of the citizens. In those days, accordingly, when it was decided to give peculiar permanence to some political arrangement, so that no subsequent assembly of the people should upset it, two expedients were resorted to. One was to make all the leading men, perhaps the whole people, swear solemnly to maintain it, and thereby to bring in the deities of the States as co-enacting or at least protecting and guaranteeing parties. Tradition attributed this expedient to Lycurgus at Sparta. The other was to provide in the law intended to be Fundamental that no proposal to repeal it should ever

be entertained, or to declare a heavy penalty on the audacious man who should make the proposal. The objection to both these expedients was that they debarred any amendment, however desirable, and however generally desired. Hence they were in practice little regarded, though the exceptionally pious or superstitious Spartans were deemed to be largely deterred from governmental changes by the fear of divine disapproval. Moreover, the second of the above-named devices or barriers could be easily turned by proposing to repeal, not the Fundamental law itself, but the prohibition and the penalty. These having been repealed—and of course the proposal would not be made unless its success were pretty well assured—the Fundamental Law would then itself be forthwith repealed. It must, however, be added that even if the Greek cities had adopted what seems to us the obvious plan of requiring a certain majority of votes (say two-thirds) for a change in the Fundamental Law, or had required it to be passed by four Assemblies in succession at intervals of three months, one may doubt whether such provisions would have restrained a majority in communities which were small, excitable, and seldom legally-minded.

Those who have suggested that the United Kingdom ought to embody certain parts of what we call the British Constitution in a Fundamental Statute (or Statutes) and to declare such a statute unchangeable by Parliament, or by Parliament acting under its ordinary forms, seem to forget that the Act declaring the Fundamental Statute to be Fundamental and unchangeable by Parliament would itself be an Act like any other Act, and could be repealed by another ordinary statute in the ordinary way. All that this contrivance would obtain would be to interpose an additional stage in the process of abolition or amendment, and to call the attention both of the people and the legislature in an emphatic way to the fact that a very solemn decision was being reversed. Some may think that such a security, if imperfect, would

be worth having. The restraint imposed would, however, be a moral not a legal one¹.

A constitution placed out of the power of the legislature may or may not be susceptible of alteration in a legal manner. Sometimes no provision has been made, when it was first established, for any change whatever. There are instances of this among constitutions granted by a monarch to his subjects—such seems to be to-day the case in Spain—but in cases of this kind it might possibly be held that the grantor implicitly reserved the power to vary his grant, as there may not have been expressed in the document, and need not be, any bilateral obligation. As already observed, the Constitution of the present Kingdom of Italy was originally granted to the Kingdom of Sardinia by King Charles Albert in 1848; and it was for a long time held that the power to change it resided in the Crown only. It was extended by a succession of popular votes (1859 to 1871) to the rest of Italy, and some conceive that this sanction makes at least its fundamental parts unchangeable. But the view that it is alterable by legislation has prevailed, and it has in fact been so altered in some points. The *Charte Constitutionnelle* granted by Louis XVIII, under which the government of France was carried on for many years,

¹ Soon after the above lines were written, the point they deal with came up in Parliament in a practical form. In the debate on the Irish Home Rule Bill of 1886 the question emerged whether Parliament could in constituting a legislature for Ireland and assigning to that legislature a certain sphere of action legally debar itself from recalling its grant or from legislating, upon matters falling within that sphere, over the head of the Irish legislature. It was generally agreed by lawyers that Parliament could not so limit its own powers, and that no statute it might pass could be made unchangeable, or indeed could in any way restrict the powers of future Parliaments.

Upon the general question whether Parliament could so enact any new Constitution for the United Kingdom as to debar itself from subsequently repealing that Constitution, it may be suggested, for the consideration of those who relish technicalities, that Parliament could, if so disposed, divest itself of its present authority by a sort of suicide, *i.e.* by repealing all the statutes under which it is now summoned, and abolishing the common-law right of the Crown to summon it, and thereupon causing itself to be forthwith dissolved, having of course first provided means for summoning such an assembly, or assemblies, as the new Constitution created. There would then be no legal means of summoning another Parliament of the old kind, and the new Constitution, whatever it was, would therefore not be liable to be altered save in such manner as its own terms provided.

was intended to create a sort of parliamentary government, in the first instance by way of gift from the sovereign, but afterwards, under Louis Philippe, by way of a compact, or kind of covenant between monarch and people. The fact that it contained no provisions for alteration, having apparently been designed to last for ever, worked against it; and the discontents of France may have ripened the faster because no constitutional method had been provided for appeasing them by changes in the machinery of government. Nothing human is immortal; and constitution-makers do well to remember that the less they presume on the long life of their work the longer it is likely to live.

The Constitutions of Norway (created in 1814, but subsequently altered) and of Greece (created in 1864) declare that amendments are to be confined to matters not fundamental, but omit to specify the matters falling under that description.

The existing Constitution of France is so far legally unalterable that no proposition for abolishing the republican form of government can be entertained. If it be asked, What is a republican form? one may answer that if ever the question has to be answered, it will be not so much by the *via iuris* as by the *via facti*. So also the Constitution of the United States is in one respect virtually, if not technically, unchangeable. No State can without its own consent be deprived of its equal representation in the Senate. As no State is ever likely to consent to such a change, the change may be deemed legally unattainable; and that any State against which it was attempted to enforce a reduction of its representation effected by constitutional amendments to which it had refused assent would be legally justified in considering itself out of the Union. In accordance with this American precedent, the new Constitution of Australia declares that no State can have its proportionate representation in the Parliament, or the minimum number of its representatives in the House of

Representatives, reduced without the approval of a majority of its electors voting on a constitutional amendment¹.

Among the methods by which constitutions of the Rigid type make, as they now almost invariably do, provision for their own amendment, four deserve to be enumerated.

The first is to give the function to the Legislature, but under conditions which oblige it to act in a special way, different from that by which ordinary statutes are passed. There may, for instance, be required a fixed quorum of members for the consideration of amendments. Belgium fixes this quorum at two-thirds of each House, while also requiring a two-thirds majority of each House for a change. Bavaria requires a quorum of three-fourths of the members of each House; Rumania one of two-thirds. Or again—and this is a very frequent provision, found even when that last-mentioned is wanting—a specified minimum majority of votes may be required to carry an amendment. Sometimes this majority is three-fourths (as in Greece and Saxony, and in the German Empire for a vote of the Federal Council): more frequently it is two-thirds, as in the United States Congress, in the Mexican Chambers, in Norway, Belgium, Rumania, Servia, Bulgaria. Another plan is to require a dissolution of the Legislature, so that the amendments carried in one session may come under the judgement of the electors at a general election, and be thereafter passed, or rejected, by the newly chosen Legislature. This arrangement, often combined with the two-thirds majority rule, prevails in Holland, Norway, Rumania, Portugal, Iceland, Sweden (where the amendment must have been passed in two ordinary successive sessions), and several other States, including some of the republics of Spanish America. It is in substance an appeal to the people as well as to their representatives, and therefore adds a further guarantee against hasty change. Finally,

¹ See Essay VIII.

the two Houses of the Legislature may sit together as a Constituent Assembly. Thus in France (Constitution of 1875) when each Chamber has resolved that the Constitution shall be revised, the two are for the moment fused, and proceed to debate and pass amendments. Haiti (Constitution of 1899) has a similar plan, which, oddly enough, was not borrowed from France, but is as old as 1843. Few will suspect France of borrowing from Haiti.

A second plan is to create a special body for the work of revision. In the United States, where a vast deal of constitution making and revising goes on in the several States, such a body is called a Convention, and is usually elected when it is desired to re-draft the whole constitution, the ultimate approval of the draft being, however, almost always reserved for the people¹. In Servia and Bulgaria, after amendments have been twice passed by the ordinary Legislature, a sort of Special Assembly, similarly elected, but twice as large, called the Great Skuptschina (in Servia) or Great Sobranje (in Bulgaria), receives and finally decides on the proposed amendments.

The republics of Paraguay, Guatemala, Honduras, Nicaragua, and Salvador also prescribe Conventions, preceded in each case by votes of the Legislature, such votes usually requiring a two-thirds majority².

A third plan is to refer the new constitution, or the amendments proposed (if the revision is partial), to a number of minor or local authorities for approval. This course is an obviously suitable one in a federation, and has accordingly been adopted by the United States, by Mexico, by Colombia, by Switzerland, and by the new

¹ But the Constitution of Mississippi of 1890 was enacted by a Convention only and never submitted to the people. See as to the United States the author's *American Commonwealth*, ch. xxxvii.

² On the whole subject of the modes of amending constitutions reference may be made to the valuable book of my friend M. Charles Borgeaud, Professor at Geneva, *Établissement et Revision des Constitutions*. See also Dareste, *Les Constitutions Modernes*. I owe to these books, and especially to the former, most of the facts here given regarding the minor States.

Australian Commonwealth, in all of which the component States are consulted, the United States requiring a three-fourths majority of States, Switzerland, Australia, and Mexico a bare majority. (Switzerland and Australia also require a majority of the citizens generally.) It is not, however, invariable in federal countries, for the Argentine Confederation entrusts amendment to a Convention, following on a three-fourths majority vote of the Legislature, and Brazil (now a federal country) leaves it to the Legislature alone, acting by a two-thirds majority in three successive debates. Neither is such a plan necessarily confined to a federation, for the existing Constitution of Massachusetts was (in 1780) submitted to the Towns (*i.e.* townships) of the State, acting as communities, and enacted by the majority of them.

The fourth plan is to refer amendments to the direct vote of the people. Originating in the New England States of America, where democracy earliest prevailed, this method has spread to Switzerland and to Australia, both of which require for alterations in the Fundamental Instrument a majority of the electors voting as well as a majority of the States. It prevails now not only in these two federations, but also in the several States of the United States (with very rare exceptions). A bare majority of votes is sufficient, except in Rhode Island, where three-fifths are required, and in Indiana and Oregon, which require a majority of all the qualified voters. The popular vote is also in use in the several Cantons of Switzerland. It was repeatedly employed in France during the first Revolution, and again (under the name of *plébiscite*) by Louis Napoleon under the Second Empire.

These variations in the mode of amending are interesting enough to deserve a few comments.

Broadly speaking, two methods of amendment are most in use: that which gives the function to the Legislature, usually requiring something more than a bare majority, and that which gives it to the People, *i.e.* the

qualified voters. The former of these methods often directs a dissolution of the Legislature to precede the final vote on amendments, and in this way secures for the people a means of delivering their judgement on the questions at issue. The latter method is, however, a more distinct and emphatic, because a more direct, recognition of Popular Sovereignty; and it has the advantage of making the constitution appear to be the work of the Nation as a whole, apart from faction, whereas in the Legislature it may have been by a party vote that the amendments have been carried. Thus it supplies the broadest and firmest basis on which a Frame of Government can rest. The Convention system is intermediate between the two others, and has struck no deep roots in the Old World, while in the United States it has been virtually superseded (as respects enactment) by that of the direct Popular Vote.

Geographically regarded, the method of revision by Legislature prevails over Europe and over most of Spanish America (being in the latter region sometimes combined with the Convention method). The Constitution which has most influenced others in Europe and become a type for them in this respect is that of Holland (1814), because it was the earliest one established after the revolutionary period. On the other hand, the United States (except the Federal Government) and the democratic governments of the Swiss and Australian Federations are ruled by the Popular method. The Constitution which has set the type of this method is that of Massachusetts of 1780.

As respects facility of change, it is interesting to note that the Constitutions which are most quickly and easily altered are those of Prussia, which prescribes no safeguard save that of two successive votes separated by an interval of at least twenty-one days, and that of France, which requires an absolute majority of each House for a proposal to revise, and an absolute majority of the two Houses sitting together for the carrying of any amend-

ment. The omission of the French Chambers in 1875 to submit to the people the constitution then framed, or to provide for their sanction to any future amendments, was due to the doubt which each party felt of the result of an appeal to the nation. The Republicans, though able to prevent the establishment of a monarchical constitution by the Legislature, were not quite sure that a republican one would be carried if submitted to a popular vote. Thus it has come about that France, which went further towards popular sovereignty in 1793 than any great country has ever done, has lived since 1875 under an instrument never ratified by the people, and which was originally regarded as purely provisional.

The Constitution which it is most difficult to change is that of the United States. It has in fact never been amended since 1809, except thrice between 1865 and 1870, immediately after and in consequence of the Civil War, and then under conditions entirely abnormal, because some States were under military duress:

The tendency of recent years has been towards easier and swifter methods than those which were in favour during the first half of the nineteenth century: and in Germany lawyers and publicists are now disposed to minimize the difference between constitutional changes and ordinary statutes, partly perhaps because doctrines of popular sovereignty obtain little sympathy from the school dominant in the new Empire. That Empire itself presents quite peculiar phenomena. So far as the Reichstag or Federal Assembly is concerned, the constitution can be altered by ordinary legislation. But in the Federal Council a majority is required large enough to enable either Prussia on the one hand or a combination of the smaller States on the other to prevent any change. This is because the component members of the Federation are not republics, as in America, Switzerland, and Australia, but are (except the three Hanse cities) monarchies, so that the Upper Federal House represents not

the people but the governments of the several German States.

It is evident that the greater or less stability of any given constitution will (other things being equal) be determined by the comparative difficulty or ease of carrying changes in one or other of the above methods. As one at least of them, that of committing the function of revision to a Constitutional Convention not followed by a popular vote, seems to interpose no more, and possibly even less, difficulty or delay than does the ordinary process of law-making by a two-chambered legislature, it may be asked why a constitution changeable in such a way should be called Rigid at all. Because inasmuch as the method of changing it is different from that of passing ordinary statutes, the people are led to realize the importance of the occasion, and may be deterred, by the trouble and formalities involved in creating the special body, from too lightly or frequently tampering with their fundamental laws. It seems a more momentous step to create this convention *ad hoc* than to carry a measure through a legislature which already exists, and is daily employed on legislative work. Experience has, moreover, shown in the United States, the country in which this method has been largely used for redrafting, or preparing amendments to, the Constitutions of the several States¹, that a set of men can be found for the work of a Convention better than those who form the ordinary legislature of the State, and that their proceedings when assembled excite more attention and evoke more discussion than do those of a State Legislature, a body which now receives little respect, though perhaps as much as it deserves. Nowadays, however, a draft constitution prepared by a Convention is in an American State almost always submitted to the people for their approval.

¹ No Constitutional Convention has ever been held for revising the Federal Constitution of 1787-9, which was drafted by a Convention and adopted by the thirteen States in succession.

The French plan of using the two Houses sitting together as a Constituent Convention has a certain interest for Englishmen, because the suggestion has been made that disputes between their House of Lords and House of Commons might be settled by a vote of both sitting together, *i.e.* of the whole of the Great Council of the Nation¹ as it sat in the thirteenth century before it had formed the habit of debating and voting in two Houses. It still meets (but does not debate or vote) as one body when the Sovereign, or a Commission representing the Sovereign, is present, as happens at the beginning and at the end of each session.

To examine the distinctive qualities of Rigid Constitutions, as I must now do, is virtually to traverse again the same path which was followed in investigating those of the Flexible type, for the points in which the latter were found deficient are those in which Rigid Constitutions excel, while the merits of the Flexible indicate the faults of the Rigid. The inquiry may, therefore, be brief.

The two distinctive merits claimed for these Constitutions are their Definiteness and their Stability.

XI. THE DEFINITENESS OF RIGID CONSTITUTIONS.

We have seen that the distinctive mark of these Rigid Constitutions is their superiority to ordinary statutes. They are not the work of the ordinary legislature, and therefore cannot be changed by it. They are embodied in one written document, or possibly in a few documents, so that their provisions are ascertainable without doubt by a reference to the documentary terms. This feature is a legitimate consequence of the importance which belongs to a law placed above all other laws. That which

¹ This plan would have more chance of being favourably entertained were the Upper House now, as it was in 1760, less than two hundred strong. As it is now nearly as large as the House of Commons, with a majority of about fourteen to one belonging to one political party, the party which is in a permanent minority might feel that the chances are not equal.

is to be the sheet-anchor of the State, giving permanent shape to its political scheme, cannot be left unwritten, and cannot be left to be gathered from a comparison of a considerable number of documents which may be confused or inconsistent. Whether it spring from the agreement of the citizens or from the free gift of a monarch, it must be embodied if possible in one, if not, at any rate in only a few solemn instruments. That which is to be a fundamental law, limiting the power of the legislature, must be set forth in specific and unmistakable terms—else how shall it be known when the legislature is infringing upon or violating it? A Flexible Constitution, which the legislature can modify or destroy at its pleasure, though it might conceivably be embodied in one document only, is in fact almost always to be collected from at least several documents, and is often, like the Flexible Constitution of England, scattered through a multitude of statutes and collections of precedents. But the benefits expected from a Rigid Constitution would be lost were its provisions left in similar confusion.

It is not, however, to be supposed that the citizen of a country controlled by a Rigid Constitution who desires to understand the full scope and nature of his government will find all that he needs in the document itself. No law ever was so written as to anticipate and cover all the cases that can possibly arise under it¹. There will always be omissions, some left intentionally, because the points not specifically covered were deemed fitter for the legislature to deal with subsequently, some, again, because the framers of the constitution could not agree, or knew that the enacting authority would not agree, regarding them. Other omissions, unnoticed at the time, will be disclosed by the course of events, for questions are sure to arise which the imagination or foresight of those who prepared the constitution never contemplated. There will also be expressions whose meaning is ob-

¹ 'Neque leges neque senatus consulta ita scribi possunt, ut omnes casus qui quandoque inciderint comprehendantur.'—Iulianus in *Digest* i. 3, 10.

scure, and whose application to unforeseen cases will be found doubtful when those cases have to be dealt with. Here let us distinguish three classes of omissions or obscurities:—

The first class includes matters, passed over in silence by the written constitution, which cannot be deemed to have been left to be settled either by the legislature or by any other organ of government, because they are too large or grave, as for instance matters by dealing with which the legislature would disturb the balance of the constitution and encroach on the province of the Executive, or the Judiciary, or (in a Federal Government) of the component States. Matters belonging to this class can only be dealt with by an amendment of the constitution itself.

The second class includes gaps or omissions relating to matters not palpably outside the competence of the legislature as defined by the constitution. Here the proper course will be for the legislature to regulate such matters by statute, or else to leave them to be settled by the action of the several organs of government each acting within its own sphere. These organs may by such action create a body of usage which, when well settled, will practically supplement the defects of the constitution, as statutes will do in like manner, so far as they are passed to cover the omitted cases.

The third class consists not of omissions but of matters which are referred to by the constitution, but in terms whose meaning is doubtful. Here the question is what interpretation is to be given to its words by the authority entitled to interpret, that authority being in some countries the legislature, in others the judicial tribunals. To the subject of Interpretation I shall presently return. Meantime, it must be noted that both Legislation and Usage in filling up the vacant spaces in the constitution, and Interpretation in explaining its application to a series of new cases as they arise upon points not expressly covered by its words, expand and develop a con-

stitution, and may make it after a long interval of time different from what it seemed to be to those who watched its infancy. The statutes, usages, and explanations aforesaid will in fact come to form a sort of fringe to the constitution, cohering with it, and possessing practically the same legal authority as its express words have. And it thus may happen that (as in the United States) a large mass of parasitic law grows up round the document or documents which contain the Constitution. Nevertheless there will still remain a distinction between this parasitic law and usage and the provisions of the constitution itself. The latter stand unchangeable, save by constitutional amendment. Statutes, on the other hand, can be changed by the legislature; usage may take a new direction; the decisions given interpreting the constitution may be recalled or varied by the authority that pronounced them. All these are in fact Flexible parasites growing upon a Rigid stem. Thus it will be seen that the apparent definiteness and simplicity of Documentary Constitutions may in any given case be largely qualified by the growth of a mass of quasi-constitutional matter which has to be known before the practical working of the constitution can be understood.

XII. THE STABILITY OF RIGID CONSTITUTIONS.

The stability of a constitution is an object to be much desired both because it inspires a sense of security in the minds of the citizens, encouraging order, industry and thrift, and because it enables experience to be accumulated whereby the practical working of the constitution may be improved. Political institutions are under all circumstances difficult to work, and when they are frequently changed, the nation does not learn how to work them properly. Experiment is the soul of progress, but experiments must be allowed a certain measure of time. The plant will not grow if men frequently uncover the roots to see how they are striking. Constitutions em-

bodied in one legal document and unchangeable by the legislature, are intended to be, and would seem likely to be, peculiarly durable. Being definite, they do not give that opening to small deviations and perversions likely to arise from the vagueness of a Flexible or 'unwritten' Constitution, or from the probable discrepancies between the different laws and traditions of which it consists. They may be battered down, but they cannot easily (save by a method to be presently examined) be undermined. When an attack is made upon them, whether by executive acts violating their provisions, or by the passing of statutes inconsistent with those provisions, such an attack can hardly escape observation. It is a plain notice to the defenders of the constitution to rally and to stir up the people by showing the mischief of an insidious change. The principles on which the government rests, being set forth in a broad and simple form, obtain a hold upon the mind of the community, which, if it has been accustomed to give those principles a general approval, will be unwilling to see them tampered with. Moreover the process prescribed for amendment interposes various delays and formalities before a change can be carried through, pending which the people can reconsider the issues involved, and recede, if they think fit, from projects that may have at first attracted them. Both in Switzerland and in the States of the American Union it has repeatedly happened that constitutional amendments prepared and approved by the legislature have been rejected by the people, not merely because the mass of the people are often more conservative than their representatives, or are less amenable to the pressure of particular 'interests' or sections of opinion, but because fuller discussion revealed objections whose weight had not been appreciated when the proposal first appeared. In these respects the Rigid Constitution has real elements of stability.

Nevertheless it may be really less stable than it appears, for there is in its rigidity an element of danger.

It has already been noted that a constitution of the Flexible type finds safety in the elasticity which enables it to be stretched to meet some passing emergency, and then to resume its prior shape, and that it may disarm revolution by meeting revolution half-way. This is just what the Rigid Constitution cannot do. It is constructed, if I may borrow a metaphor from mechanics, like an iron railway-bridge, built solidly to resist the greatest amount of pressure by wind or water that is likely to impinge upon it. If the materials are sound and the workmanship good, the bridge resists with apparent ease, and perhaps without showing signs of strain or displacement, up to the highest degree of pressure provided for. But when that degree has been passed, it may break suddenly and utterly to pieces, as the old Tay Bridge did under the storm of December, 1879. The fact that it is very strong and all knit tightly into one fabric, while enabling it to stand firm under small oscillations or disturbances, may aggravate great ones. For just as the whole bridge collapses together, so the Rigid Constitution, which has arrested various proposed changes, may be overthrown by a popular tempest which has gathered strength from the very fact that such changes were not and under the actual conditions of politics could not be made by way of amendment. When a party grows up clamouring for some reforms which can be effected only by changing the constitution, or when a question arises for dealing with which the constitution provides no means, then, if the constitution cannot be amended in the legal way, because the legally prescribed majority cannot be obtained, the discontent that was debarred from any legal outlet may find vent in a revolution or a civil war. (The history of the Slavery question in the United States illustrates this danger on so grand a scale that no other illustration is needed. The Constitution of 1787, while recognizing the existence of slavery, left sundry questions, and in particular that of the extension of slavery into new territories and States, unsettled. Thirty years

later these matters became a cause of strife, and after another thirty years this strife became so acute as to threaten the peace of the country. Both parties claimed that the Constitution was on their side. Had there been no Constitution embodied in an instrument difficult of change, or had it been practicable to amend the Constitution, so that the majority in Congress could have had, at an earlier stage, a free hand in dealing with the question, it is possible—though no one can say that it is certain—that the War of Secession might have been averted. So much may at any rate be noted that the Constitution, which was intended to hold the whole nation together, failed to do. There might no doubt in any case have been armed strife, as there was in England under its Flexible Constitution in 1641. But it is at least equally probable that the slave-holding party, which saw its hold on the government slipping away, hardened its heart because it held that it was the true exponent of the Constitution, and because the Constitution made compromise more difficult than it need have been in a country possessing a fully sovereign legislature.

Two opposing tendencies are always at work in countries ruled by these Constitutions, the one of which tends to strengthen, the other to weaken them. The first is the growth of the respect for the Constitution which increasing age brings. The remark is often made that if husband and wife do not positively dislike one another, and if their respective characters do not change under ill-health or misfortune, every year makes them like one another better. They may not have been warmly attached at first, but the memories of past efforts and hardships, as well as of past enjoyments, endear them more and more to one another, and even if jars and bickerings should unhappily recur from time to time, the strength of habit renders each necessary to the other, and makes that final severance which, at moments of exasperation, they may possibly have contemplated with equanimity, a severe blow when it arrives. So a nation,

though not contented with its Constitution, and vexed by quarrels over parts of it, may grow fond of it simply because it has lived with it, has obtained a measure of prosperity under it, has perhaps been wont to flaunt its merits before other nations, and to toast it at public festivities. The magic of self-love and self-complacency turns even its meaner parts to gold, while imaginative reverence for the past lends it a higher sanction. This is one way in which Time may work. But Time also works against it, for Time, in changing the social and material condition of a people, makes the old political arrangements as they descend from one generation to another a less adequate expression of their political needs. Nobody now discusses the old problem of the Best Form of Government, because everybody now admits that the chief merit of any form is to be found in its suitability to the conditions and ideas of those among whom it prevails. Now if the conditions of a country change, if the balance of power among classes, the dominant ideas of reflective men, the distribution of wealth, the sources whence wealth flows, the duties expected from the administrative departments of government, all become different, while the form and constitutionally-prescribed methods of government remain unmodified, it is clear that flaws in the Constitution will be revealed which were previously unseen, and problems will arise with which its arrangements cannot cope. The remedy is of course to amend the Constitution. But that is just what may be impossible, because the requisite majority may be unattainable; and the opponents of amendment, entrenched behind the ramparts of an elaborate procedure, may succeed in averting changes which the safety of the community demands. The provisions that were meant to give security may now be dangerous, because they stand in the way of natural development.

Even where no strong party interest is involved it may be hard to pass the amendments needed. The his-

tory of the United States again supplies a case in point. Two defects in its Constitution are admitted by most political thinkers. One is the absence of power to establish a uniform law of marriage and divorce over the whole Union. The other is the method of conducting the election of a President, a method which in 1876 brought the country to the verge of civil war, and may every four years involve the gravest risks. Yet it has been found impossible to procure any amendment on either point, because an enormous force of united public opinion is needed to ensure the concurrence of two-thirds of both Houses of Congress and three-fourths of the States. The first of these two changes excites no sufficient interest among politicians to make them care to deal with it. The second is neglected, because no one has a clear view of what should be substituted, and neither party feels that it has more to gain than has the other by grappling with the problem.

A historical comparison of the two types as regards the smoothness of their working, and the consequent tendency of one or other to secure a quiet life to the State, yields few profitable results, because the circumstances of different nations are too dissimilar to enable close parallels to be drawn, and because much depends upon the skill with which the provisions of each particular instrument have been drawn and upon the greater or less particularity of those provisions. The present Constitution of France, for instance, is contained in two very short and simple documents, which determine only the general structure of the government, and are in size not one-twentieth of the Federal Constitution of Switzerland. Hence it follows that a far freer play is left to the legislature and executive in France than in Switzerland; and that these two authorities have in the former State more power of meeting any change in the conditions of the country, and also more power of doing harm by hasty and unwise action, than is permitted in the latter. As Adaptability is the characteristic merit and insecurity

the characteristic defect of a Flexible Constitution, so the drawback which corresponds to the Durability of the Rigid is its smaller capacity for meeting the changes and chances of economic, social and political conditions. A provision strictly defining the structure of the government may prevent the evolution of a needed organ. A prohibition debarring the legislature from passing certain kinds of measures may prove unfortunate when a measure of that kind would be the proper remedy. Every security has its corresponding disadvantage.

XIII. THE INTERPRETATION OF RIGID CONSTITUTIONS.

A well-drawn Rigid Constitution will confine itself to essentials, and leave many details to be filled in subsequently by ordinary legislation and by usage. But (as already observed) even the best-drawn instrument is sure to have omitted some things which ought to have been expressly provided for, to have imposed restrictions which will prove inconvenient in practice, to contain provisions which turn out to be susceptible of different interpretations when cases occur raising a point to which the words of those provisions do not seem to be directly addressed. When any of these things happen, the authorities, legislative and executive, who have to work the Constitution find themselves in a difficulty. Steps seem called for which the Constitution either does not give power to do, or forbids to be done, or leaves in such doubt as to raise scruples and controversies. The authorities, or the nation itself, have then three alternative courses open to them. The first is to submit to the restrictions which the Constitution imposes, and abandon a contemplated course of action, though the public interest demands it. This is disagreeable, but if the case is not urgent, may be the best course, though it tends to the disparagement of the Constitution itself. The second course is to amend the Constitution: and it is obviously the proper one, if it be possible. But it may be practically

impossible, because the procedure for passing an amendment may be too slow, the need for action being urgent, or because the majority that can be secured for amendment, even if large, may be smaller than the Constitution prescribes. The only remaining expedient is that which is euphemistically called Extensive Interpretation, but may really amount to Evasion. Evasion, pernicious as it is, may give a slighter shock to public confidence than open violation, as some have argued that equivocation leaves a man's conscience less impaired for future use than does the telling of a downright falsehood. Cases occur in which the Executive or the Legislature profess to be acting under the Constitution, when in reality they are stretching it, or twisting it, *i.e.* are putting a forced construction upon its terms, and affecting to treat that as being lawful under its terms which the natural sense of the terms does not justify. The question follows whether such an evasion will be held legal, *i.e.* whether acts done in virtue of such a forced construction as aforesaid will be deemed constitutional, and will bind the citizens as being legally done. This will evidently depend on a matter we have not yet considered, but one of profound importance, *viz.* the authority in whom is lodged the right of interpreting a Rigid Constitution.

On this point there is a remarkable diversity of theory and practice between countries which follow the English and countries which follow the Roman law. The English attribute the right to the Judiciary. As a constitutional instrument is a law, distinguished from other laws only by its higher rank, principle suggests that it should, like other laws, be interpreted by the legal tribunals, the last word resting, as in other matters, with the final Court of Appeal. This principle of referring to the Courts all questions of legal interpretation may be said to be inherent in the English Common Law, and holds the field in all countries whose systems are built upon the foundation of that Common Law. In particular, it holds good

in the United Kingdom and in the United States. As the British Parliament can alter any part of the British Constitution at pleasure, the principle is of secondary political importance in England, for when any really grave question arises on the construction of a constitutional law it is dealt with by legislation. However, the action of the Courts in construing the existing law is watched with the keenest interest when questions arise which the Legislature refuses to deal with, such, for instance, as those that affect the doctrine and discipline of the Established Church. So in the seventeenth century, when constitutional questions were at issue between the King and the House of Commons, which it was impossible to settle by statute, because the king would have refused consent to bills passed by the Commons, the power of the Judges to declare the rules of the ancient Constitution was of great significance. In the United States, where Congress cannot alter the Constitution, the function of the Judiciary to interpret the will of the people as set forth in the Constitution has attained its highest development. The framers of that Constitution perhaps scarcely realized what the effect of their arrangements would be. More than ten years passed before any case raised the point; and when the Supreme Court declared that an Act of Congress might be invalid because in excess of the power granted by the Constitution, some surprise and more anger were expressed. The reasoning on which the Court proceeded was, however, plainly sound, and the right was therefore soon admitted. Canada and Australia have followed the English doctrine, so the Bench has a weighty function under the constitutions of both those Federations.

On the European Continent a different view prevails, and the Legislature is held to be the judge of its own powers under the Constitution, so that no Court of law may question the authority of a statute passed in due form. Such is the rule in Switzerland. There, as in most parts of the European Continent, the separation of

the Judiciary from the other two powers has been less complete than in England, and the deference to what Englishmen and Americans call the Rule of Law less profound. The control over governmental action which the right of interpretation implies seems to the Swiss too great, and too political in its nature, to be fit for a legal tribunal. It is therefore vested in the National Assembly, which when a question is raised as to the constitutionality of a Federal Statute or Executive Act, or as to the transgression of the Federal Constitution by a Cantonal Statute, is recognized as the authority competent to decide. The same doctrine seems to prevail in the German Empire, though the point is there not quite free from doubt, and also in the Austrian Monarchy, in France, and in Belgium. In the Orange Free State, living under Roman-Dutch law, the Bench, basing itself on American precedents, claimed the right of authoritative interpretation, but the Legislature hesitated to admit it.

American lawyers conceive that the strength and value of a Rigid Constitution are greatly reduced when the Legislature becomes the judge of its own powers, entitled after passing a statute which really transgresses the Constitution to declare that the Constitution has in fact not been transgressed. The Swiss, however, deem the disadvantages of the American method still more serious, for they hold that it gives the last word to the judges, persons not chosen for or fitted for such a function, and they declare that in point of fact public opinion and the traditions of their government prevent the power vested in their National Assembly from being abused. And it must be added that the Americans have so far felt the difficulty which the Swiss dwell on, that the Supreme Court has refused to pronounce upon the action of Congress in 'purely political cases,' *i. e.* cases where the arguments used to prove or disprove the conformity to the Constitution of the action taken by Congress are of a political nature.

Returning to the question of legislative action alleged

to transgress the Constitution, it is plain that if the Legislature be, as in Switzerland, the arbiter of its own powers, so that the validity of its acts cannot be questioned in a court of law, there is no further difficulty. But where that validity can be challenged, as in the United States, it might be supposed that every unconstitutional statute will be held null, and that thus any such stretching or twisting of the Constitution as has been referred to will be arrested. But experience has shown that where public opinion sets strongly in favour of the line of conduct which the Legislature has followed in stretching the Constitution, the Courts are themselves affected by that opinion, and go as far as their legal conscience and the general sense of the legal profession permit—possibly sometimes even a little farther—in holding valid what the Legislature has done. This occurs most frequently where new problems of an administrative kind present themselves. The Courts recognize, in fact, that ‘principle of development’ which is potent in politics as well as in theology. Human affairs being what they are, there must be a loophole for expansion or extension in some part of every scheme of government; and if the Constitution is Rigid, Flexibility must be supplied from the minds of the Judges. Instances of this kind have occurred in the United States, as when some twenty years ago the Supreme Court recognized a power in a State Legislature to deal with railway companies not consistent with the opinions formerly enounced by the Court, though they disclaimed the intention of overruling those opinions ¹.

¹ A still more remarkable instance has been furnished, while these pages are passing through the press (June, 1901), by the decisions of the Supreme Court of the United States in the group of cases which arose out of questions relating to the applicability of the Federal Constitution to the island of Puerto Rico, recently ceded by Spain to the United States. The Court had to deal with a constitutional question raising large issues of national policy regarding the application of the Federal Constitution to territories acquired by conquest and treaty: and its judgments in these cases (given in every case by majorities only) have expanded the Constitution, *i.e.* have declared it to have a meaning which may well be its true meaning, but which was not previously ascertained, and certainly by many lawyers not admitted, to be its true meaning.

Does not a danger lurk in this? May not a majority in the Legislature, if and when they have secured the concurrence, honest or dishonest, of the Judiciary, practically disregard the Constitution? May not the Executive conspire with them to manipulate places on the highest Court of Appeal, so as to procure from it such declarations of the meaning of the Constitution as the conspiring parties desire? May not the Constitution thus be slowly nibbled away? Certainly. Such things may happen. It is only public opinion and established tradition that will avail to prevent them. But it is upon public opinion, moulded by tradition, that all free governments must in the last resort rely.

XIV. DEMOCRACIES AND RIGID CONSTITUTIONS.

The mention of traditions, that is to say of the mental and moral habits of judgement which a nation has formed, and which guide its political life, as the habits of each one of us guide his individual life, suggests an inquiry as to the effect of Documentary Constitutions on the ideas and habits of those who live under them. I will not venture on broad generalizations, because it is hard to know how much should be assigned to the racial tendencies of a nation, how much to the circumstances of its history, how much to its institutions. But the cases of Switzerland and the United States seem to show that the tendency of these instruments is to foster a conservative temper. The nation feels a sense of repose in the settled and permanent form which it has given to its government. It is not alarmed by the struggles of party in the legislature, because aware that that body cannot disturb the fundamental institutions. Accordingly it will often, contracting a dislike to change, negative the amendments which the legislature submits to it. This happens in Switzerland, as already observed; and the people of the United States, though liable to sudden and violent waves of political opinion, show so little disposition to innovate

that Congress has not proposed any amendments to the State Legislatures since 1870¹. I may be reminded that the Constitutions of the several States of the Union are frequently recast or amended in detail. This is true, but the cause lies not so much in a restless changefulness as in the low opinion entertained of the State Legislatures. The distrust felt for these bodies induces the people to take a large part of what is really ordinary legislation out of their hands, and to enact themselves, in a form of a Constitution, the laws they wish. State Constitutions now contain many regulations on matters of detail, and have thus, in most States, ceased to be considered fundamental instruments of government. To revise or amend them has become merely a convenient method of direct popular legislation, similar to the Swiss Popular Initiative and Referendum. But the fundamental parts of these instruments are but slightly changed.

In estimating the influence of Flexible Constitutions in forming the political character of a nation, in stimulating its intelligence and training its judgement, it was remarked that only the governing class, a very small part of the nation even in democratic countries, are directly affected. This is less true of a Rigid Constitution. While a Flexible Constitution like the Roman or English requires much knowledge, tact and courage to work it, and develops these qualities in those who bear a part in the working of it, as legislators or officials or magistrates, a Rigid Constitution tends rather to elicit ingenuity, subtlety and logical acumen among the corresponding class of persons. It is apt to give a legal cast to most questions, and sets a high, perhaps too high, premium on legal knowledge and legal capacity. But it goes further. It affects a much larger part of the community than the Flexible Constitution does. Few even of the governing class can be expected to understand the latter. The average Roman voter in the *comitia* in the

¹ Something must, however, be allowed for the provisions which require large majorities for any amendment of the Constitution.

days of Cicero, like the average English voter at the polls to-day, probably knew but little about the legal structure of the government he lived under. But the average Swiss voter, like the average native American voter (for the recent immigrant is a different sort of creature), understands his government, can explain it, and has received a great deal of education from it. Talk to a Swiss peasant in Solothurn or Glarus, and you will be astonished at his mastery of principles as well as his knowledge of details. Very likely he has a copy of the Federal Constitution at home. He has almost certainly learnt it at school. It disciplines his mind much as the Shorter Catechism trained the Presbyterian peasantry of Scotland. As there is no mystery about a scheme of government so set forth, it may be thought that he will have little reverence for that which he comprehends. It is, however, his own. He feels himself a part of the Government, and seems to be usually imbued with a respect even for the letter of the instrument, a wholesome feeling, which helps to form that law-abiding spirit which a democracy needs.

A documentary Constitution appears to the people as the immediate outcome of their power, the visible image of their sovereignty. It is commended by a simplicity, which contrasts favourably with the obscure technicalities of an old common law Constitution. The taste of the multitude, and especially of that class which outnumbers all other classes, the thinly-educated persons whose book-knowledge is drawn from dry manuals in mechanically-taught elementary schools, and who in after life read nothing but newspapers, or penny weeklies, or cheap novels—the taste of this class, and that not merely in Europe but perhaps even more in the new countries, such as Western America and the British Colonies, is a taste for ideas level with their comprehension, sentiments which need no subtlety to be appreciated, propositions which can be expressed in unmistakable posi-

tives and negatives. Thus the democratic man (as Plato would call him) is pleased to read and know his Constitution for himself. The more plain and straight-forward it is the better, for so he will not need to ask explanations from any one more skilled. And a good reason for this love of plainness and directness may be found in the fact that the twilight of the older Constitutions permitted abuses of executive power against which the express enactments of a Rigid Constitution protect the people. Magna Charta, the Bill of Rights, the Twelve Tables, were all fragments, or rather instalments, of such a Constitution, rightly dear to the commons, for they represented an advance towards liberty and order ¹.

The theory of democracy assumes that the multitude are both competent and interested; competent to understand the structure of their government and their own functions and duties as ultimately sovereign in it, interested as valuing those functions, and alive to the responsibility of those duties. A Constitution set out in black and white, contained in a concise document which can be expounded and remembered more easily than a Constitution growing out of a long series of controversies and compromises, seems specially fitted for a country where the multitude is called to rule. Only memory and common sense are needed to master it. It can lay down general principles in a series of broad, plain, authoritative propositions, while in the case of the 'historical Constitution' they have to be gathered from various sources, and expressed, if they are to be expressed correctly, in a guarded and qualified form. Now the average man, if intelligent enough to comprehend politics at all, likes general principles. Even if, as some think, he overvalues them, yet his capacity for absorbing them gives him a sort of comprehension of his govern-

¹ The 'People's Charter' of 1838 was called for as another such onward step. Its Six Points were to be the basis of a democratic reconstruction of the government.

ment and attachment to it which are solid advantages in a large democracy.

Constitutions of this type have usually arisen when the mass of the people were anxious to secure their rights against the invasions of power, and to construct a frame of government in which their voices should be sure to prevail. They furnish a valuable protection for minorities which, if not liable to be overborne by the tyranny of the mass, are at any rate liable to be disheartened into silence by superior numbers, and so need all the protection which legal safeguards can give them. Thus they have generally been accounted as institutions characteristic of democracy, though the cases of Germany and Japan show that this is not necessarily true.

A change of view has, however, become noticeable within the last few years. In the new democracies of the United States and the British self-governing Colonies—and the same thing is true of popularly governed countries in Europe—the multitude no longer fears abuses of power by its rulers. It is itself the ruler, accustomed to be coaxed and flattered. It feels no need for the protection which Rigid Constitutions give. And in the United States it chafes under those restrictions on legislative power, embodied in the Federal Constitution or State Constitution (as the case may be), which have surrounded the rights of property and the obligation of subsisting contracts with safeguards obnoxious, not only to the party called Socialist, but to reformers of other types. As these safeguards are sometimes thought to prevent the application of needed remedies and to secure impunity for abuses which have become entrenched behind them, the aforesaid constitutional provisions have incurred criticism and censure from various sections, and many attempts have been made by State legislatures, acting at the bidding of those who profess to control the votes of working men, to disregard or evade the restrictions. These attempts are usually defeated by the action of the Courts, whence it

happens that both the Federal Constitution and the functions of the Judiciary are often attacked in the country which was so extravagantly proud of both institutions half a century ago. This strife between the Bench as the defender of old-fashioned doctrines (embodied in the provisions of a Rigid Constitution (Federal or State)) and a State Legislature acting at the bidding of a large section of the voters is a remarkable feature of contemporary America.

The significance of this change in the tendency of opinion is enhanced when we find that a similar change has been operative in the opposite camp. The very considerations which have made odious to some American reformers those restrictions on popular power, behind which the great corporations and the so-called 'Trusts' (and capitalistic interests generally) have entrenched themselves, have led not a few in England to applaud the same restrictions as invaluable safeguards to property. Realizing, a little late in the day, that political power has in England passed from the Few to the Many, fearing the use which the Many may make of it, and alarmed by the precedents which land legislation in Ireland has set, they are anxious to tie down the British legislature, while yet there is time, by provisions which shall prevent interference with a man's control over what he calls his own, shall restrict the taking of private property for public uses, shall secure complete liberty of contracting, and forbid interference with contracts already made. Others in England, in their desire to save political institutions which they think in danger, propose to arrest any sudden popular action by placing those institutions in a class by themselves, out of the reach of the regular action of Parliament. In other words, the establishment in Britain of a species of Rigid Constitution has begun to be advocated, and advocated by the persons least inclined to trust democracy. 'Imagine a country'—so they argue—'with immense accumulated wealth, and a great inequality of fortunes, a country which rules a vast

and distant Empire, a country which depends for her prosperity upon manufactures liable to be injured by bad legislation, and upon a commerce liable to be imperilled by unskilful diplomacy, and suppose that such a country should admit to power a great mass of new and untrained voters, to whose cupidity demagogues will appeal, and upon whose ignorance charlatans will practise. Will not such a country need something better for her security than a complicated and delicately-poised Constitution resting largely on mere tradition, a Constitution which can at any moment be fundamentally altered by a majority, acting in a revolutionary transient spirit, yet in a perfectly legal way? Ought not such a country to place at least the foundations of her system and the vital principles of her government out of the reach of an irresponsible parliamentary majority, making the procedure for altering them so slow and so difficult that there will be time for the conservative forces to rally to their defence before any fatal changes can be carried through?'

I refer to these arguments, which were frequently heard in England during some years after the extension of the suffrage in 1884¹, with no intention of discussing their soundness, for that belongs to politics, but solely for the sake of illustrating how different are the aspects which the same institution may come to wear. A century ago revolutionists were the apostles, conservatives the enemies, of Rigid Constitutions. Even forty years ago it was the Flexibility of the historical British Constitution that was its glory in the eyes of admirers of the British system, its Rigidity that was the glory of the American Constitution in the eyes of fervent democrats.

¹ They are much less heard now (1900), partly because the public mind is occupied with matters of a different order, partly because the political party which professes to be opposed to innovation has latterly commanded a large majority in the British Legislature.

XV. THE FUTURE OF THE FLEXIBLE AND RIGID TYPES.

A few concluding reflections may be devoted to the probable future of the two types that have been occupying our minds. Are both likely to survive? or if not, which of the two will prevail and outlast the other?

Two reasons suggest themselves for predicting the prevalence of the Rigid type. One is that no new Flexible Constitutions have been born into the world for many years past, unless we refer to this class those of some of the British self-governing colonies¹. The other is that no country now possessing a Rigid Constitution seems likely to change it for a Flexible one. The footsteps are all the other way. Flexible Constitutions have been turned into Rigid ones. No Rigid one has become Flexible². Even those who complain of the undue conservatism of the American Constitution do not propose to abolish that Constitution altogether, nor to place it at the mercy of Congress, but merely to expunge parts of it, though no doubt parts which (such as the powers of the Judiciary) have been vital to its working.

Against these two arguments may be set the fact that popular power has in most countries made great advances, and does not need the protection of an instrument controlling the legislature and the executive, which are already only too eager to bend to every breeze of popular opinion. If we lived in a time of small States, as the ancients did, the people would themselves legislate in primary assemblies. Why then, it may be asked, should they care to limit the powers of legislatures which are completely at their bidding? The old reasons for holding legislatures and executives in check have disappeared. Why should the people, safe and self-confident, impose a check on themselves? In this there may be

¹ The British self-governing Colonies (except the two great federations, see ante, pp. 168-9) have constitutions which may be changed in all or nearly all points by their respective legislatures, but they are not independent States, and the power of the legislatures to alter the constitutions is therefore not complete.

² The Constitution of Italy, already referred to, is scarcely an exception.

some truth. But it must be remembered that since modern States are larger than those of former times, and tend to grow larger by the absorption of the small ones, legislatures are necessary, for business could not be carried on by primary popular assemblies, even with the aid of 'plébiscites.' Now legislatures are nowhere rising in the respect and confidence of the people, and it is therefore improbable that any nation which has a documentary Constitution, holding its legislature in subjection, will abolish it for the benefit of the legislature, although it may wish to do more and more of its legislation by the direct action of the people, as it does in Switzerland and in some of the States of the American Union. On the whole, therefore, it seems probable that Rigid Constitutions will survive in countries where they already exist.

Two other questions remain. Will existing Flexible Constitutions remain? Are such new States as may arise likely to adopt Constitutions of the Rigid or of the Flexible type?

An inquiry whether countries which, like Hungary and Britain, now live under ancient Flexible Constitutions will exchange them for new documentary ones would resolve itself into a general study of the political prospects of those countries. All that can be said, apart from such a study, is that our age shows no such general tendency to change in this respect as did the revolutionary and post-revolutionary era of the first sixty years of the nineteenth century. Still, a few lines may be given to considering whether any such alteration of form is likely to pass on the Constitution which has long had the unquestioned pre-eminence in age and honour, that, namely, of the United Kingdom, which is really the ancient Constitution of England so expanded as to include Scotland and Ireland.

So far as internal causes and forces are concerned, this seems improbable. The people are not likely, despite the alarms felt and the advice tendered by the

uneasy persons to whom reference has already been made, to part with the free play and elastic power of their historical Cabinet and Parliamentary system. England has never yet made any constitutional change either on grounds of theory or from a fear of evils that might arise in the future. All the modifications of the frame of government have been gradual, and induced by actually urgent needs.

But there is another set of causes and forces at work which may, as some think, affect the question. It has already been noted that Rigid Constitutions have arisen where States originally independent or semi-independent have formed Confederations. These States, finding the kind of connexion which treaties had created insufficient for their needs, have united themselves into one Federal State, and expressed their new and closer relation in the form of a documentary Constitution. Such a Constitution has invariably been raised above the legislature it was creating, because the States which were uniting wished to guard jealously such autonomy as they respectively retained, and would not leave those rights at the mercy of the legislature. This happened in the United States in 1787-9, in Switzerland after the fall of Napoleon, in Germany when the North German Confederation and German Empire were created in 1866 and 1870-71. It has happened also in Canada and in Australia.

Two proposals of a federalizing nature have recently been made regarding the United Kingdom, one to split it up into a Federation of four States, the other to make it a member of a large Federation. Neither seems likely to be carried out at present, but both are worth mentioning, because they illustrate the occasions on which, and methods by which, constitutions may be transformed. The United Kingdom stands to its self-governing Colonies in what is practically a permanent alliance as regards all foreign relations, these relations being managed by the mother country, with complete

local legislative and administrative autonomy both for each Colony and for the mother country¹. Many think that this alliance is not a satisfactory, and cannot well be a permanent, form of connexion, because at present almost the whole burden—and it is a heavy one—of naval and military defence falls upon Britain, while the Colonies have no share in the control of foreign relations, and may find themselves engaged in a war, or bound by a treaty, regarding which they have not been consulted. Thus the idea has grown up that some sort of confederation ought to be established, in which there would be a Federal Assembly, containing representatives of the (at present seven) component States², and controlling those matters, such as foreign relations and a system of military and naval armaments, which would be common to the whole body. If this idea were ever to take practical shape, it would probably be carried out by a statute establishing a new Constitution for the desired Confederation, and creating the Federal Assembly. Such a statute would be passed by the Parliament of the United Kingdom, and (being expressed to be operative over the whole Empire) would have full legal effect for the Colonies as well as for the mother country. Now if such a statute assigned to the Federal Assembly certain specified matters, as for instance the control of imperial defence and expenditure or (let us say) legislation regarding merchant shipping and copyright, taking them away from the present and future British Parliament as well as from the parliaments of the several Colonies, and therewith debarring the British Parliament from recalling or varying the grant except by the

¹ This autonomy is, however, not legally complete as regards the Colonies, for the mother country may, though she rarely does, disallow colonial legislation. In Canada the Dominion Legislature cannot affect the rights of the several Provinces, the power to do so remaining with the Imperial Parliament which passed the Confederation Act of 1867. So too under the Constitution of the Australian Commonwealth the rights of each colony are protected by the instrument of federation.

² Viz. the United Kingdom, the two great Colonial Federations (Canada and Australia), and four comparatively small self-governing Colonies, viz. New Zealand, Cape Colony, Natal, and Newfoundland.

consent of the several Colonies (or perhaps of the Federal Assembly itself), it is clear that the now unlimited powers of the British Parliament would have been reduced. A part of the future British Constitution would have been placed beyond its control: and to that extent the British Constitution would have ceased to be a Flexible one within the terms of the definition already given¹. Parliament would not be fully sovereign; and if either the British or a Colonial Parliament passed laws inconsistent with statutes passed by the Federal Assembly in matters assigned to the latter, the Courts would have to hold the transgressing laws invalid.

Doubtless, if such a Federal Constitution were established, a Supreme Court of Appeal on which some colonial judges should sit would be thought essential to it, and questions arising under the Federation Act (as to the extent of the powers of the Federal Assembly and otherwise) would go before it, sometimes in the first instance, sometimes by way of appeal from inferior Courts.

The other proposal is to turn the United Kingdom itself into a Federation by erecting England, Scotland, Ireland, and Wales into four States, each with a local legislature and ministry controlling local affairs, while retaining the Imperial Parliament as a Central or Federal Legislature for such common affairs as belong in the United States to Congress, and in Canada to the Dominion Parliament, and in Australia to the Commonwealth Parliament. If such a scheme provided, as it probably would provide, for an exclusive assignment to the local legislatures of local affairs, so as to debar the Imperial Parliament from interfering therewith, it would destroy the present Flexible British Constitution and substitute

¹ It may of course be observed (see p. 175, ante) that the British Parliament, while it continues to be elected as now, may be unable to divest itself of its general power of legislating for the whole Empire, and might therefore repeal the Act by which it had resigned certain matters to the Federal Assembly and resume them for itself. This is one of those *apices iuris* of which the Romans say *non sunt iura*; and in point of fact no Parliament can be supposed capable of the breach of faith which such a repeal would involve. The supposed legal difficulty might, however, be avoided by some such expedient as that previously suggested.

a Rigid one for it. Care would have to be taken to use proper legal means of extinguishing the general sovereign authority of the present Parliament, as for instance by directing the elections for the new Federal Legislature to be held in such a way as to effect a breach of continuity between it and the old Imperial Parliament, so that the latter should absolutely cease and determine when the new Constitution came into force. Upon this scheme also it would be for the Courts of Law to determine whether in any given case either the Federal or one of the Local Legislatures had exceeded its powers.

Some persons have proposed to combine both these proposals so as to make the four parts of the United Kingdom each return members, along with the Colonies, to a Pan-Britannic Federal Legislature, and to place the local legislatures of Scotland, for instance, or Wales, in a line with those of the Australian Commonwealth or New Zealand. On this plan also the British Constitution would become a Rigid one.

The difficulties, both legal and practical, with which these proposals, taken either separately or in conjunction, are surrounded, are greater than those who advocate them have as yet generally perceived.

XVI. ARE NEW CONSTITUTIONS LIKELY TO ARISE ?

The remaining question, also somewhat speculative, relates to the prospects the future holds out to us of seeing new States with new Constitutions arise.

New States may arise in one of two ways, either by their establishment in new countries where settled and civilized government has been hitherto unknown, or by the breaking up of existing States into smaller ones, fragments of the old.

The opportunities for the former process have now been sadly curtailed through the recent appropriation by a few great civilized States of some two-thirds of the surface of the globe outside Europe. North America is

in the hands of three such States. Central and South America, though the States are all weak and most of them small in population, are so far occupied that no space is left. The last chance disappeared when the Argentine Republic asserted a claim to Patagonia, where it would have been better that some North European race should have developed a new colony, as the Welsh settlers were doing on a small scale. Australia is occupied. Asia, excluding China and Japan in the East, and the two dying Musulman powers in the West, is virtually partitioned between Britain and Russia, with France holding a bit of the south-east corner. So Africa has now been (with trifling exceptions) divided between five European Powers (Portugal, England, France, Germany, Italy). Thus there is hardly a spot of earth left on which a new independent community can establish itself, as the Greeks founded a multitude of new commonwealths in the eighth and seventh centuries B. C., and as the Teutonic invaders founded kingdoms during the dissolution of the Roman Empire.

If we turn to the possibilities of new States arising from the ruins of existing ones, whether by revolt or by peaceful separation, the prospect is not much more encouraging. There is indeed Turkey. Five out of the six new States that have arisen in Europe during this century have been carved out of the territories she claimed—viz. Greece, Rumania, Servia, Bulgaria, Montenegro: and there is material for one or two more in Europe and possibly for one or two in Asia, though it is more probable that both the Asiatic and European dominions of the Sultan will be partitioned among existing States than that new ones will spring out of them. The ill-compacted fabric of the Austro-Hungarian monarchy may fall to pieces. Parts of the Asiatic dominions of Russia may possibly (though in a comparatively distant future) become independent of the old Muscovite motherland, and the less civilized among the republics of Central and South America may be broken into parts

or combined into new States, though the saying 'plus cela change, plus c'est la même chose' is even more true of those countries than of that to which it was originally applied, and gives little hope of interesting novelties. But on the whole the tendency of modern times is rather towards the aggregation of small States than towards the division of large ones. Commerce and improved facilities of communication are factors of constantly increasing importance which work in this direction, and this general tendency for the larger States to absorb the smaller forbids us to expect the rise, within the next few generations, of more than a few new Constitutions which will provide matter for study to the historian or lawyer of the future.

What type of Constitution will these new States, whatever they be and whenever they come, be disposed to prefer? Upon this point it is relevant to observe that all the new States that have appeared since 1850 have adopted Rigid Constitutions, with the solitary exception of Montenegro, which has no Constitution at all, but lives under the paternal autocracy of the temporal ruler who has succeeded the ancient ecclesiastical Vladika¹. Each of them, on beginning its independent life, has felt the need of setting out the lines of its government in a formal instrument which it has consecrated as fundamental by placing it above ordinary legislation. Similar conditions are likely to surround the birth of any new States, similar motives to influence those who tend their infancy. The only cases in which a Flexible Constitution is likely to arise would be the division of a country having such a Constitution into two or more fragments, each of which should cleave to the accustomed system; or the revolt of a people or community among whom, as they grow into a State, usages of government that had naturally sprung up might, when independence had been established, continue to be observed and so ripen into a Constitution. The chance that either of these cases will

¹ As to Italy, however, see above, pp. 171 and 176.

present itself is not very great. New States will more probably adopt documentary Constitutions, as did the insurgent colonies of England after 1776 and of Spain after 1811, and as the Christians of South-Eastern Europe did when they had rid themselves of the Turk. Upon the whole, therefore, it would seem that the future is rather with Rigid Constitutions than with those of the Flexible type.

It is hardly necessary to close these speculations by adding the warning that all prophecies in politics must be highly conjectural. Circumstances change, opinion changes; knowledge increases, though the power of using it wisely may not increase ¹.

The subtlety of nature, and especially the intricacy of the relations she develops between things that originally seemed to lie wide apart, far surpasses the calculating or predicting wit of man. Accordingly many things, both in the political arrangements of the world and in the beliefs of mankind, which now seem permanent may prove transitory. Democracy itself, though most people treat it as a thing likely to grow stronger and advance further, may suffer an eclipse. Human nature no doubt remains. But human nature has clothed itself in the vesture of every sort of institution, and may change its fashions as freely in the future as it has done in the past.

Soph. *Ajax*, 646.

NOTE TO ESSAY III

CONSTITUTIONAL AND OTHER GOVERNMENTS

THE races and nations of the world may, as respects the forms of Government under which they live, be distributed into four classes:—

I. Nations which have created and maintain permanent political institutions, allotting special functions to each organ of Government, and assigning to the citizens some measure of participation in the business of Government.

In these nations we discover Constitutions in the proper sense of the term. To this class belong all the States of Europe except Russia and Montenegro, and, outside Europe, the British self-governing Colonies, the United States and Mexico, the two republics of South Africa, Japan and Chili, possibly also the Argentine Republic.

II. Nations in which the institutions aforesaid exist in theory, but are seldom in normal action, because they are in a state of chronic political disturbance and mostly ruled, with little regard to law, by military adventurers. ✓
This class includes the republics of Central and South America, with the exception of Chili, and possibly of Argentina, whose condition has latterly been tolerably stable.

III. Nations in which, although the upper class is educated, the bulk of the population, being backward, has not begun to desire such institutions as aforesaid, and which therefore remain under autocratic monarchies.

To this class belong Russia and Montenegro. Japan has lately emerged from it: and two or three of the newest European States might, but for the interposition of other nations, have remained in it.

IV. Nations which are, for one reason or another, below the level of intellectual life and outside the sphere of ideas which the permanent political institutions afore-said presuppose and need for their proper working. This class includes all the remaining peoples of the world, from intelligent races like the Chinese, Siamese, and Persians, down to the barbarous tribes of Africa.

Constitutions, in the sense in which the term is used in the preceding Essay, belong only to the first class, and in a qualified sense to the second. In the modern world they are confined to Europe and her Colonies, adding Japan, which has imitated Europe. In the ancient world they were confined to three races, Greeks, Italians, and Phoenicians, to whom one may perhaps add such races as the Lycians, who had learnt from the Greeks. Their range is somewhat narrower than that of law, that is to say, there are peoples which, like the Musulmans of Turkey, Egypt, and Persia, have law, but have no Constitutions.

No race that has ever lived under a lost Constitutional Government has permanently lost it, except those parts of the Roman Empire which now form part of the Turkish Empire; and the Roman Empire, though its Government never ceased to be in a certain sense constitutional, ultimately extinguished the habit of self-government among its subjects.

IV

THE ACTION OF CENTRIPETAL AND CENTRIFUGAL FORCES ON POLITICAL CONSTITUTIONS ¹

As every government and every constitution is the result of certain forces and tendencies which bring men together in an organized community, so every government and every constitution tends when formed to hold men together thenceforth, training them to direct their efforts to a common end and to sacrifice for that purpose a certain measure of the exercise of their individual wills. So strong is the aggregative tendency, that each community naturally goes on by a sort of law of nature to expand and draw in others, whether persons or groups, who have not previously belonged to it: nor is physical force the prime agent, for the great majority of mankind prefer some kind of political society, even one in whose management they have little or no share, to mere isolation. As this process of expansion and aggregation continues, the different political groups which it has called into being come necessarily in contact with one another. The weaker ones are overcome or peacefully absorbed by the stronger ones, and thus the number of groups is continually lessened. Where two communities of nearly equal strength encounter each other, each may for a time succeed in resisting the attraction of the

¹ This Essay was composed in the early part of 1885. It has been revised throughout, but the substance remains the same.

other. But in this changeful world it almost always happens that sooner or later one becomes so much stronger that the other yields to it: and thus in course of time the number of detached communities, *i.e.* of groups each with its own centre of attraction, becomes very small, because the weak have been swallowed up by the strong. This is the general, though, as we shall see, not the universal course of events. There is also another force at work, which has at some moments in history developed great strength.

I. HOW THE TENDENCIES TO AGGREGATION AND TO DISJUNCTION RESPECTIVELY AFFECT CONSTITUTIONS.

Of the many analogies that have been remarked between Law in the Physical and Law in the Moral World, none is more familiar than that derived from the Newtonian astronomy, which shows us two forces always operative in our solar system. One force draws the planets towards the sun as the centre of the system, the other disposes them to fly off from it into space. So in politics, we may call the tendency which draws men or groups of men together into one organized community and keeps them there a Centripetal force, and that which makes men, or groups, break away and disperse, a Centrifugal. A political Constitution or frame of government, as the complex totality of laws embodying the principles and rules whereby the community is organized, governed, and held together, is exposed to the action of both these forces. The centripetal force strengthens it, by inducing men (or groups of men) to maintain, and even to tighten, the bonds by which the members of the community are gathered into one organized body. The centrifugal assails it, by dragging men (or groups) apart, so that the bonds of connexion are strained, and possibly at last loosened or broken. That no community can be exempt from the former force is obvious. But neither can any wholly escape the latter. For every community

has been built out of smaller groups, and the members of such groups have seldom quite lost the attraction which each had to its own particular centre, such attraction being of course dissociative as regards the other groups and their members¹. Moreover in no large community can there ever be a complete identity of views and wishes, of interests and feelings, between all the members. Many must have something to complain of, something which sets them against the rest and makes them desire to be, for some purposes, differently treated, or (in extreme cases) to be entirely separated. The existence of such a grievance constitutes a centre round which a group is formed, and this group is in so far an element of disjunction. Accordingly the history of every community and every constitution may be regarded as a struggle between the action of these two forces, that which draws together and that which pushes apart, that which unites and that which dissevers.

This subject, it may be thought, belongs either to History, in so far as history attempts to draw general conclusions from the facts she records, or to that branch of political science which may be called Political Dynamics, and is one with which the constitutional lawyer is not directly concerned. The constitutional lawyer, however, must always, if he is to comprehend his subject and treat it fruitfully, be a historian as well as a lawyer. His legal institutions and formulæ do not belong to a sphere of abstract theory but to a concrete world of fact. Their soundness is not merely a logical but also a practical soundness, that is to say, institutions and rules must represent and be suited to the particular phenomena they have to deal with in a particular country. It is through history that these phenomena are known. History explains how they have come to be what they are. History shows whether they are the result of tendencies still in-

¹ In the pages that follow the word Group is used to denote the section of persons within a larger community who may be held together by some tie, whether of interest or sentiment or race or local habitation, which makes them a sort of minor community inside the larger one.

creasing or of tendencies already beginning to decline. History explains them by parallel phenomena in other times and places. Thus the lawyer who has to consider and advise on any constitutional problem, and still more the lawyer who has to contrive a constitutional scheme for grappling with a political difficulty, must study the matter as a historian, otherwise he will himself err and mislead those whom he advises. Great lawyers often have so erred, and with lamentable results. A lawyer who shall deal with a constitutional problem as he would deal with a technical point in the law of real property will be as much astray as an advocate who should prosecute or defend a political prisoner with a sole regard to the law of treason or sedition which he may find in his books, heedless of the temper and opinion of those from among whom the jury will be drawn.

An obvious illustration may be found in the fact that when any particular community is studied from the constitutional point of view, and the inquiry is raised whether it ought to have a Flexible or a Rigid Constitution, the question of the comparative actual strength of these two forces becomes a vital one. Where the centripetal force is palpably the stronger, either sort of constitution will do to hold the community together: and the choice between the two sorts may be made on other grounds. But where the centrifugal force is potent, and especially where there are reasons to apprehend its further development, the establishment of a Rigid Constitution may become desirable, and yet may be a matter of much delicacy and difficulty. If the constitution be framed in the interests of a centralizing policy, there is a danger that it may assume and require for its maintenance a greater strength in the centripetal forces than really exists, and that for the want of such strength the constitution may be exposed to a strain it cannot resist. Amid the constant change of phenomena, a Rigid Constitution necessarily represents the past, not the present; and if the tendencies actually operative are towards the

dissociation of the component groups of the community, a frame of government which fails to provide scope for these tendencies will soon become out of date and unfit for its work. Where, on the other hand, the existence of distinct groups, each desiring some control of its own affairs, is fully perceived and duly admitted as a factor in the condition of the community, and where it is desired to give legal recognition to the fact, and to protect the other local groups or sub-communities from being overridden by the largest among the groups, or by the community as a whole, the creation of a Rigid Constitution offers a valuable means of securing these objects. For such a constitution may be so drawn as to place the local groups under the protection of a fixed body of law, making their privileges an integral part of the frame of government, so that the whole Constitution must stand or fall with the maintenance of the rights enjoyed by the groups¹. The familiar instance of such a form of Rigid Constitution is a Federal Constitution. It is specially adapted to the case of a country where the centrifugal forces are so strong that it is clear that the groups will not consent to be wholly merged and lost in one community, as under a Flexible Constitution might befall them, yet where they are sufficiently sensible of the advantages of combination to be willing to enter into a qualified and restricted union. And in these cases it has sometimes proved to be an efficient engine for further centralization. That is to say, the best way of strengthening in the long run the centripetal tendencies has been to give so much recognition and play to the centrifugal as may disarm them, and may allow the causes which make for unity to operate quietly without exciting antagonism.

It appears accordingly that the historian who studies constitutions, and still more the draftsman who frames them, must have his eye constantly fixed on these two

¹ Subject of course to any provisions for amending the Constitution which may have been inserted. See Essay III, p. 176 sqq.

forces. They are the matter to which the legislator has to give form. They create the state of things which a Constitution has to deal with, so laying down principles and framing rules as on the one hand to recognize the forces, and on the other hand to provide safeguards against their too violent action. Their action will preserve or destroy the Constitution,—preserve it, if it has given them due recognition and scope, destroy it, if its provisions turn out to be opposed to the sweep of irresistible currents. The forces that move society are to the constructive jurist or legislator what the forces of nature are (in the famous Baconian phrase) to man. He is their servant and interpreter. They can be overcome only by obeying them. If he defies or misunderstands them, they overthrow his work. If he knows how to use them, they preserve it. But his difficulty is greater than that of the physicist, because these social forces are more complex than those of inanimate nature, and vary in their working from generation to generation.

II. TENDENCIES WHICH MAY OPERATE EITHER AS CENTRIPETAL OR AS CENTRIFUGAL FORCES.

Now let us see what are the chief among the tendencies which in political society are capable of playing the part either of centripetal or of centrifugal forces.

So far as individual men are concerned, all the tendencies that work on them may be said to be associative tendencies, that is to say, every thing tends to knit individual men together into a band or group, and to make them act together. The repulsion of man from man is so rare that we may ignore it. Even the keenest individualist desires to convert other men to his individualism, and forms a league for the purpose with others who are like-minded.

As regards political societies, the subject wherewith we are here concerned, the tendencies I am going to enumerate may be either associative or dissociative.

Whether in the case of any given State they act as agglutinative and consolidating forces or as splitting and rending forces depends upon whether they are at the moment giving their support to, or are enlisted in the service of, the State as a whole, or are strengthening the group or groups inside the State which are seeking to assert either their rights within the State or their independence of it. Even obedience, the readiness to submit and follow, which might seem primarily a centripetal force, may be centrifugal as against the State if it leads the partisans of a particular recalcitrant group to surrender their wills to the leaders of that group. Even the love of independence, the desire to let each man's individuality have full scope, may act as a centripetal force if it disposes men to revolt against the tyranny of a faction and maintain the rights and interests of the whole people against the attempts of that faction to have its own way. There are always two centres of attraction and two groupings to be considered, the larger, which we call the State, and the smaller, which may be either a subordinate community, such as a province, district or dependency, or only a party or faction. And the centripetal force which draws men to the smaller centre is a centrifugal force as regards the larger.

These two tendencies, which I have referred to as Obedience and Individualism, are so familiar, and the former is a disposition of human nature so generally pervasive, as to need no further discussion. The other tendencies which may operate either centrifugally or centripetally may be classed under the two heads of Interest and Sympathy. Under the head of Interest there fall all those influences which belong to the sphere of Property, including of course Industry and Commerce as means of acquiring property. These influences usually make for consolidation and assimilation. It is a gain to the trader or the producer that the area of consumers which he supplies without the hindrance of an interposed customs tariff should be as wide as possible. It is a gain

that communications by sea and land should be safe, easy, swift, and cheap, and these objects are better secured in a large country under a strong government. It is a gain that coinage, weights, and measures should be uniform over the largest possible area and that the standard of the currency should be upheld. It is a gain that the same laws and the same system of courts should prevail in every part of a State—and the larger the State the better, so far as these matters are concerned—and that the law should be steadily enforced and complete public order secured. All these things make not only for the growth of industry and the spread of trade, but also for the value of all kinds of property. And all these influences, derived from the consideration of such gains, which play upon the citizen's mind, are usually aggregative influences, disposing him to desire the extension of the State and the strength of its central authority. Considerations of Interest, therefore, usually operate as a centripetal force. It was through commercial interests that the States of Germany were, after the fall of the old Romano-Germanic Empire, drawn into that Zollverein which became a stage towards, and ultimately the basis of, the present German Empire. It was the increase of trade, after the union of Scotland and England, that by degrees reconciled the Scotch to a measure which was at first most unpopular among them as threatening to extinguish their national existence. It is the absence of any strong commercial motives for political union that has hampered the efforts of those who have striven, so far successfully, to keep Norway and Sweden united.

In exceptional cases, however, the influences of Interest may be centrifugal. A particular group of traders or landowners, for instance, living in a particular district, may think they will gain more by having the power to enact special laws for the conduct of their own affairs or for the exclusion of competing persons than they will by entering or by remaining under the uniform system of a

large State¹. Trade considerations counted for something in making the planters of the Slave States of America desire to sever themselves from a government in which the protectionist party was generally dominant. It is partly on economic grounds that the various provinces of the Cis-Leithanian part of the Austro-Hungarian Monarchy have been allowed, and desire to maintain, each its autonomy. It was largely a divergence of economic views and interests that so long deterred the free trade colony of New South Wales from linking its fortunes in a federation with the protectionist colonies; nor were there wanting industrial grounds which made the adhesion of Queensland long doubtful.

To the head of Sympathy we must refer all the influences which flow not from calculation and the desire of gain, but from emotion or sentiment. The sense of community, whether of belief, or of intellectual conviction, or of taste, or of feeling (be it affection or aversion towards given persons or things), engenders sympathy, and draws men together. To the same class belong the recognition of a common ancestry, the use of a common speech, the enjoyment of a common literature. The importance of these factors has often been exaggerated. Some of the keenest Irish revolutionaries have been English by blood and Protestants by faith. The Borders of Northumberland and those of Berwickshire did not hate one another less because they were of the same stock and spoke the same tongue. The Celts of Inverness-shire and the Teutons of Lothian are now equally enthusiastic Scotchmen, though they disliked and despised one another almost down to the days of Walter

¹ The case of Ireland shows the same forces of industrial or commercial interest, real or supposed, operating partly as centripetal, partly as centrifugal. The Nationalist party conceive that economic benefits would result from a local legislature, which could aid local industries. The mercantile class, especially in the north-eastern part of the island, fear commercial loss from anything which could hamper their trade intercourse with Scotland and England, or which might be deemed prejudicial to commercial credit. With the soundness of either view I am not concerned; it is sufficient to note the facts.

Scott¹. Mere identity of origin does not count for much, as witness the ardent Hungarian patriotism of most of the Germans and Jews settled in Hungary, with perhaps no drop of Magyar blood in their veins. Community of language does not any more than a common ancestry necessarily make for love, and indeed may increase hatred, because in an age of newspapers each of two disputant parties can read the injurious things said of it by the other. Civil wars are, like family quarrels, proverbially embittered. Tocqueville wrote, in 1833, that he could imagine no more venomous hatred than the Americans then felt for England. So it may be said that though the want of these elements of community is usually an obstacle to unity, their presence is no guarantee for its existence. Somewhat greater value belongs to identity of traditions and historical recollections, and to the possession of the materials for a common pride in past achievements. Most men find a personal satisfaction and take a personal pride in recalling the feats and struggles of the nation, or the tribe, or the party, or the sect, to which they belong, so the recollection of exploits or sufferings becomes an effective rallying point for a group. We all know how powerful a force such memories have been at various times in stimulating national feeling in Italy, in Germany, in Hungary, in Scotland, in Portugal, in Ireland.

Still less necessary is it to dwell upon the influence of Religion, which, as it touches the deepest chords of man's nature, is capable of educing the maximum of harmony or discord. No force has been more efficient in knitting factions and States together, or in breaking them up and setting the parts of a State in fierce antagonism to one another. Religion held together the Eastern Empire, originally a congeries of diverse races, in the midst of dangers threatening it from every side for

¹ A curious survival of the dislike of the Lowlander to the Highlander may be found in Carlyle's comments upon the Highland wife of his friend Thomas Campbell the poet.

eight hundred years. Religion now holds together the Turkish Empire in spite of the hopeless incompetence of its government. Religion split up the Romano-Germanic Empire after the time of Charles the Fifth. The instances of the Jews and the Armenians are even more familiar.

There remains a large and rather miscellaneous category of sources of sympathy which we may call by the general name of Elements of Compatibility. Traits of character, ideas, social customs, similarity of intellectual culture, of tastes, and even of the trivial usages of daily life, all contribute to link men together, and to assimilate them further to one another, as the absence of these things tends to differentiation and dissimilation, because it supplies points in which the members of one group, racial or local or social, feel themselves out of touch with the members of another, and possibly inclined to show contempt, or to think themselves contemned, on the ground of the divergence. The natural repulsion which the Germans usually feel for the Slavs, and the Slavs for the Germans, seems to have its root in a difference of character and temperament which makes it hard for either race to do full justice to the other. That repulsion is powerfully operative to-day in the Austrian Empire. In the ancient world the obstinate and passionate Egyptians seem to have displayed, and provoked, a similar antagonism in their contact with other races, and particularly with the arrogant Persians.

These influences of Sympathy, like those of Interest, may figure either as centripetal or centrifugal forces, according as the centre round which they group and towards which they draw men is the main centre of that larger circle represented by the State or the centre of the smaller circle represented by the tribe, the district, the province, the faith, the sect, the faction. The same feeling may play the one part or the other according to the accident of individual view, or taste, or environment. Thus in a University consisting of a number of autono-

mous colleges, one man may be a centralizer, and seek to bring the colleges into subordination, pecuniary and administrative, to the University, while another man may desire to maintain their independence, and yet both may set a high value on corporate spirit, and be filled with it themselves. In one man this spirit clings to the college, in another it glorifies the University. The patriotism which makes a Magyar desire that Hungary should absorb Croatia, and that which makes a Croat desire to sever his country from Hungary, are essentially the same sentiment, though, as regards the monarchy of the Hungarian Crown, the sentiment operates with the Magyar as an attractive, with the Croat as a repulsive force. This statement is generally true of that complex feeling, based upon affinities of race, of speech, of literature, of historic memories, of ideas, which we call the Sentiment of Nationality, a sentiment comparatively weak in the ancient world and in the Middle Ages, and which did not really become a factor of the first moment in politics till the religious passions of the sixteenth and seventeenth centuries had almost wholly subsided, and the gospel of political freedom preached in the American and French Revolutions had begun to fire men's minds. As regards the historical States of Europe, it is a sentiment which is both aggregative and segregative. It has contributed to create the German Empire: yet it is also a sentiment which makes Bavaria unwilling to merge in that Empire her individual existence. In Bavaria, and still more in the case of Scotland, which had a long and brilliant national history, the sentiment of local has been found compatible with a sentiment of imperial patriotism.

It is a remarkable feature of recent times that the tendency of a common interest to draw groups together and make them prize the unity of the State is often accompanied by the parallel development of an opposite tendency, based on sentiment, to intensify the life of the smaller group and in so far to draw it apart, and thereby

weaken the unity of the State. This arises from the fact that the march of civilization is material on the one hand, intellectual and moral on the other. So far as it is material, it generally makes for unity. On its intellectual and social or moral side it works in two ways. It tends to break down local prejudices and to create a uniform type of habits and character over a wide area. But it also heightens the influence of historical memories. It is apt to rekindle resentment at old injuries. Filling men's minds with the notion of social and political equality, it disposes them to feel more keenly any social or political inferiority to which they may be subjected. Raising the estimate they set upon themselves as individuals and as a race, it makes them more bold in organizing themselves and claiming what they deem their rights. And so one notes the singular phenomenon that men are stirred to disaffection, or impelled towards separation, by grievances less acute than those which their ancestors, sunk in ignorance and despondency, bore almost without a murmur. The Roman Catholic Irish since 1782 and the Transylvanian Rumans since 1848 are instances in point.

All these tendencies, pulling this way and that, are among the facts which a given Constitution has to deal with, are forces which it must use in order to secure its own strength and permanence. Where, in a free country, the system of government has grown up naturally, and can be readily modified by the normal action of the normal sovereign authority, *i.e.* where the Constitution is a Flexible one, the presumption is that the rules and usages of the Constitution conform to and represent the actual forces, and draw strength therefrom. Yet even in countries governed on this system there is a risk that the Constitution which the will of a majority has established may leave a minority discontented and unrestful, and that such discontent and unrest may impede the working of the machinery and create an element of instability. In such countries, it may be the part of wis-

dom for the majority to yield something to the minority, modifying the Constitution, so far as it can safely be modified, in order to remove the obstacles to harmony. A centrifugal force which is not strong enough to disrupt the State, because the centripetal forces are on the whole more powerful, may nevertheless be able to cause a harmful friction, and may even, if the State be exposed to external attacks, become a source of peril. Everybody can now see that Rome ought to have admitted the Italian allies to the franchise long before the Social War, that Catholic Emancipation ought to have been enacted by the Irish Parliament in 1796 or by the British Parliament immediately after the Union of 1800, that Denmark ought not to have waited till 1874 before she conceded a qualified autonomy to Iceland, that the same country might probably have retained Schleswig-Holstein if she had yielded long before the war of 1864 some of the demands made by the German inhabitants of those duchies. And, if we may apply the same principle to despotically governed countries, most people will agree that Austria ought to have retired from Lombardy before 1859, and that the Turks gained nothing by clinging to Bulgaria, and may be gaining nothing now by clinging to Macedonia.

III. HOW CONSTITUTIONS MAY USE THE CENTRIPETAL FORCES TO PROMOTE NATIONAL UNITY.

As we are here dealing with constitutions considered in their relation to the forces and tendencies that rule in politics (*i. e.* as a part of political dynamics), we may now inquire what it is that Constitutions can accomplish in the way of regulating or controlling these forces.

Every political Constitution has three main objects. One is to establish and maintain a frame of government under which the work of the State can be efficiently carried on, the aims of such a frame of government being on the one hand to associate the people with the

government, and, on the other hand, to preserve public order, to avoid hasty decisions and to maintain a tolerable continuity of policy.

Another is to provide due security for the rights of the individual citizen as respects person, property, and opinion, so that he shall have nothing to fear from the executive or from the tyranny of an excited majority. This object has fallen into the background since these rights came to be fully recognized. But in earlier times it was the chief purpose of constitutional provisions from Magna Charta down to the Bill of Rights and the Declaration of Independence. The safeguard for these rights which the Constitution of England provided, was the thing which, more perhaps than anything else, moved the admiration of foreign observers who studied that constitution during the eighteenth century.

The third object is to hold the State together, not only to prevent its disruption by the revolt or secession of a part of the nation, but to strengthen the cohesiveness of the country by creating good machinery for connecting the outlying parts with the centre, and by appealing to every motive of interest and sentiment that can lead all sections of the inhabitants to desire to remain united under one government.

In pursuing these objects, a constitution seeks to achieve by means of legal provisions that which in ruder times it was often necessary to accomplish by physical force. No doubt at all times the natural disposition to obey (the sources of which I have analysed elsewhere¹) was an agent more constant and effective than physical force. Nevertheless, the latter was needed, sometimes from the side of the government to maintain order and compel subjects to bear their share of the public burdens, sometimes from the side of the subjects to abate the abuses into which the possession of power tempts rulers. Troops to keep order and quell revolts, and men handy with their weapons and ready to rise in insur-

¹ See Essay IX, p. 467 sqq.

rection to dethrone bad monarchs or expel bad ministers, were a necessary part of the equipment of political societies in the ruder ages.

A good constitution relieves the government from the necessity of frequently resorting to military force by securing that those who govern shall be persons approved by the bulk of the citizens, as well as by providing for the purposes of coercion machinery so promptly and effectively applicable, that the elements of disturbance either do not break forth or are quickly suppressed. Similarly it relieves the subjects from the need of rising in rebellion by providing machinery whereby the complaints of those who think themselves aggrieved shall be fully made known, and shall, if well founded, have due effect on the rulers by warning them to remove the grievances, or by displacing them if they fail to do so.

How constitutional machinery should be framed and worked for the attainment of the two former objects enumerated above, viz. the establishment of a proper frame of government and the safeguarding of private rights, is a matter which does not fall within the scope of our present inquiry. The third object does, so we have to ask how a constitution should be framed in order to enable it to maintain and strengthen the unity of a State.

It may do this in two ways. One is by setting various centripetal forces to work. The other is by preventing all or some of the centrifugal forces from working.

I have already enumerated the tendencies or influences which operate to draw men together and bind them into a community, be it greater or smaller, and have pointed out that these tendencies may in any given case operate in favour either of the State as a whole, in which case they preserve it, or in favour of some group or section within it, in which case they sap its unity. Let us now consider how the constitutional arrangements of a State may be so devised as to draw together all its members and all the minor groups within it.

The most generally available of these centripetal tendencies is trade, that interchange of commodities which benefits all the producers, by giving them a market, all the consumers by giving them the means of getting what they want, all the middlemen by supplying them with occupation. A Constitution can render no greater service to the unity as well as to the material progress of a nation than by enabling the freest interchange of products to go on within its limits. Nothing did more to keep the districts of each of the great European countries divided during the Middle Ages than the levying of tolls along the rivers and highways by petty potentates, or than the insecurity of those rivers and highways, as well as the want of good roads, for thus the market for the producers of the cheaper articles was narrowed to the small area immediately around them, and men were prevented from realizing, or benefiting by, the greatness of the country they belonged to. England, with an exceptionally strong and centralized government, suffered less from these tolls and this insecurity than did the large States of the Continent, and England arrived at unity sooner than they did. And so, conversely, nothing has done more to unify the vast territories of the United States than the provisions of the Federal Constitution which secure perfect freedom of trade within its limits, and empower the National Government to regulate the means of communication between the several States of the Union. So the Customs Union of the Germanic States, formed under the auspices of Prussia in A. D. 1829, did a great work in stimulating industry, while it showed the people the benefits of united action, and prepared the way for the formation of the new German Empire.

Another influence of moment is the establishment of a common law and a common system of courts. It is not an influence which can be reckoned on so invariably or confidently as can the influence of commerce, for any hasty attempt to change the law (whether customary or

statutory) to which men are accustomed may provoke resistance and retard the growth of unity. Great Britain has wisely forbore to impose her own law on the dominions she has acquired by conquest or purchase. Roman-Dutch law remains in South Africa, in Ceylon, and in Guiana; Roman-French law in Lower Canada. So the French Code was left in force not only in Alsace-Lorraine which Germany took in 1871 but also in the German country all along the left bank of the Lower Rhine, when that region was reunited to Germany in 1814. So Roman law has remained in Louisiana, which was once French. But where one legal system can, without exciting resentment, be extended over the whole of a country, it becomes a valuable unifying force. As respects the substance of law, this happens by the formation of certain habits of thought and action, certain ideas of justice and utility. As respects the administration of law, it happens by giving to the central executive an engine for making its power felt, and usually felt for good. In the Middle Ages, the jurisdiction of the king's courts was found the most effective means both in England, from Henry II onward, and (somewhat later) in France, of extending the power of the central government and accustoming the people to rally round the Crown as the representative of national unity as well as of justice. A somewhat similar process has been in progress during the last thirty years among those petty principalities which we call the Laos States, and which lie to the north of the kingdom of Siam. The princes of these States were practically independent, living in a country of forests and hills, and recognizing only a vague titular suzerainty as vested in the Siamese king at Bangkok. But when foresters from British Burma had come among them, desiring to cut down and export the teak trees in those forests which make their only wealth, and when disputes had arisen between the Laos chiefs and these timber traders, the Government of India found it needful to make treaties with the king of Siam, under

which a Court presided over by Siamese officials was set up in Chiangmai, the principal State. By means of this Court the Siamese Government has been able gradually to obtain complete control of the forest administration and the revenues thence arising, and incidentally to strengthen its general authority over these Laos States.

Similarly, the jurisdiction of the British Privy Council as a Supreme Court of Appeal from the Colonies and India, and the action of the Supreme Court of the United States as the final Court of Appeal for the whole Union (in certain classes of cases), have done something to make the members of these vast political aggregates realize the bond that links them together. In the case of the United States, respect for the Federal Courts and the keen interest with which their development of the law by judicial interpretation is followed by a large and powerful profession has been an important factor in strengthening the sense of national unity.

After law, religion, not as less potent, for it is more potent, but as more uncertain, because it has been as often a dissevering as a unifying influence. There is, however, a marked distinction between the earlier and the later forms of religion as regards the energy of the force they exert. In the earlier stages of civilization, when tradition and ritual counted for much, and abstract theology had not yet come into being, the worship of the gods of the nation or city was a part, a necessary and sometimes the most deep-rooted part, of the political constitution and the national life. In Egypt the rise or fall of a great deity is often the sign of the rise or fall of a dynasty. Moab, Edom, and Ammon, are each the people of a peculiar God. After the Captivity, when the minor Semitic peoples decline or vanish, Israel continues to be held together by the name of Jehovah, and by the Law He has given. Every Greek and every Italian city has its own distinctive public State worship. A race sometimes pays special honour to one out of its various deities, and the devotion of the Dorians to

Apollo, of the Athenians to the Virgin Goddess, finds a mediaeval parallel in that of the Swedes to Odin, of the Norwegians to Thor. As the Roman Empire included so many races and cities that no one deity or group of deities could be worshipped by all, altars were erected to the Goddess Rome, and the Guardian Spirit or Genius of the reigning Emperor became a common object of devotion for the whole mass of his subjects. In modern times the strong religions are (except Hinduism) World Religions, and therefore not national or local as were those of antiquity. But they exert an even greater political power. For monotheistic religions, however they may develop into elaborate rites and forms of ceremonial observance, are primarily philosophical religions, in which abstract ideas and beliefs take not only a firm but an exclusive grasp of the mind and heart of whosoever holds them. Hence they form a closer tie than did the worships of the ancient Italo-Hellenic world. Christianity created a new cohesion when the provinces of the Roman Empire were beginning to fall asunder. Islam formed a prodigious dominion out of many diverse peoples. The mutually hostile forms of a World Religion, such as the Sunnite and Shiite sects in Islam, act as consolidating or dissevering influences just as the religion itself did before schisms had arisen. When a faith grounded in peculiar dogmas or observances is held by one section of a people and hated by another section, it becomes a formidably centrifugal force. When the great mass of a people have embraced such a faith, their political cohesion is strengthened, and they may attract from other communities persons or groups who share their beliefs. The same principle applies to beliefs which cannot be called religious, but which exert a similar power over men's emotions. Even where no question of the supernatural is involved, the holding in common of certain ideas deemed supremely valuable whether for the individual or for society, may operate as a centrifugal or centripetal force.

A nation with a national religion which all or nearly all citizens cherish possesses a bond of unity which grows the more powerful the more its traditions become entwined with the national life. It is chiefly the influence of the Orthodox Church that has made a people so low in the scale of civilization as Russia was three centuries ago, to-day so united, so strong through its union, and so submissive to its sovereign, for it is not less as Head of the Church than as a secular prince that the Czar commands the reverence of his subjects¹. Accordingly, whenever a State Church can be set up which embraces practically the whole of the people, and when it can be associated with the government and the movements of public life, the cohesion of the nation and the power of the government which controls the church will be increased. Of the possibly pernicious influence of such arrangements on such a church and on religion I do not speak; that is quite another matter. I am only pointing out that a Constitution will gain strength, and a nation unity, if the ecclesiastical arrangements can be linked to those of the secular government, assuming the people to be all attached to the same form of faith and worship.

Similarly, in so far as those who frame a Constitution can make it provide a system of education which will give the people common ideas and common aspirations, in so far as they can persuade the inhabitants to use a common language, if the country is one where more than one tongue has been spoken, or even to enjoy and meet for the enjoyment of common festivities and games, they will be availing themselves of influences not to be despised. The Prussian Government founded the University of Bonn immediately after the recovery of the left bank of the Rhine from France in 1814, and the University of Strassburg immediately after the recovery of Alsace in 1871, in both cases with the view of bene-

¹ There are of course dissenting sects in Russia, some of them counting many adherents, but they have seldom, and in no large measure, affected the political unity of the nation.

fitting these territories and of drawing them closer to the rest of the country by the afflux of students from other parts of it, an aim which was realized. Indeed the non-local character of the German Universities, each serving the whole of the lands wherein the German tongue was spoken, powerfully contributed to intensify the sentiment of a common German nationality throughout the two centuries (1648 to 1870) during which Germany had virtually ceased to be a State. The Olympian, Pythian, Isthmian, and Nemean games had no contemptible effect in fostering the sentiment of a common national unity, as against the barbarians, among the Greeks, who had never enjoyed and did not desire political union. The admission of the Macedonian king to strive at the Olympian games was a political event of high significance, for it enabled his descendants Philip and Alexander the Great to claim to belong to the Hellenic race.

Some of these various engines for promoting the cohesion of a nation may seem to lie rather in the sphere of governmental action than in that of a Constitution. Commercial freedom, however, as well as religious compulsion on the one hand, or religious freedom on the other hand, have been provided for by some Rigid Constitutions. So too has been the use of certain languages. Where the Constitution is a Flexible one, the question whether the laws regulating such matters are to be deemed a part of the Constitution depends entirely on the practical importance ascribed to them, since in such a Constitution there is no distinction of form between fundamental and other provisions.

IV. HOW CONSTITUTIONS MAY REDUCE OR REGULATE THE CENTRIFUGAL FORCES.

Now let us see what Constitutions may effect in the other of the two above specified ways, viz. what they may do to meet and grapple with, and if possible disarm,

the tendencies which make for disruption, *i.e.* the forces which, while drawing men together in minor groups within the State, are as regards the State itself centrifugal forces.

What are these tendencies? History tells us that the chief among them are race feeling, resentment for past injuries, grievances in respect of real or supposed ill-treatment in matters of industry, or of trade, or of education, or of language, or of religion, where these grievances or any of them press on a part only of the population. If they press on the whole population, or on the humbler classes as a whole, they are perturbing, but not necessarily nor even probably disruptive, *i.e.* they threaten disaffection or a general revolt against the government, rather than the severance of a particular province or the secession of a particular section of the people. It is only with grievances which affect one section or district, and make it desire an independence to be obtained by separation, that we have here to deal. There must be in every such case either a sentiment of dislike on the part of the disaffected section towards the rest of the nation, or else a belief that great material advantages will be obtained by separation; and the latter of these causes is almost sure to produce the former. When two or more of these tendencies combine in any given case, so much the stronger does the desire for separation become.

A few illustrations will explain better than a long abstract statement what I desire to convey. In the ancient world the thing which we call National Sentiment was seldom a powerful factor, perhaps because the more advanced peoples were divided into small city communities, while the backward peoples, living under large empires like the Persian or that of the Seleucid kings, were allowed to retain their own customs and religion, and often their native princes, feeling the weight of subjection only in having to pay tribute and send a contingent in war. The only nations that gave much trouble to the

Achaemenid kings of Persia were the Egyptians, a race very peculiar and very conceited, and the Greeks of Asia Minor. Under the Roman Empire there were wonderfully few national revolts, probably because the imperial government pressed equally upon all, conceded rights of citizenship pretty freely, and gave the subjects in exchange for their own national sentiment the higher pride of belonging to the majestic World State which had engulfed them. The chief source of disruptive attempts lay in the monotheistic religions. The Jews made more than one obviously hopeless rebellion. When Christianity became the religion of the Empire, schisms and heresies gave trouble. Africa was convulsed by the Donatist movement. Egypt was disaffected owing to Monophysitism, and no doubt gave herself the more readily to the Arab conquerors in respect of this disaffection. The persecuted Montanist sectaries of Phrygia revolted in the sixth century. It was the religious persecution of the Fire-worshipping Sassanid kings that provoked their Armenian vassals to rebellion¹. So in the fifteenth and sixteenth centuries, the sentiment of nationality having not yet reached its full strength, it was chiefly by religious divisions that the unity of States was threatened. This was what lost the Dutch Netherlands to Spain. This was what split up the Romano-Germanic Empire, and made it, after the Thirty Years' War, the mere shadow of a State. It contributed to keep the Highlanders distinct from the Lowland population of Scotland after the Reformation (though other causes also were at work), and it was of course a still more potent force in Ireland. In our own time it nearly rent Switzerland in two in the war of the Sonderbund. Conversely, any one who notices how little the unity of the nation has been threatened in Spain, a country where the populations and dialects of the different provinces still present striking contrasts, and are accom-

¹ The dualistic Zoroastrianism of Persia seems to have taken many of the characteristics of a monotheistic religion.

panied by diversities of character, will be disposed to attribute this fact not merely to the absence of natural boundaries between the provinces, but also to the remarkable religious unity which the nation has always preserved.

In our own time, while religion is a less energetic factor, what is called national sentiment has begun to threaten loosely compacted States. It compelled the transformation in 1868 of the so-called Austrian Empire into the present Dual Monarchy. It shakes the Austrian half of that monarchy now, so sharp is the antagonism between the Czechs of Bohemia and the other Slavic populations of Cis-Leithania and the Germans of the Western and South-Western Crown Lands. Iceland differs from Denmark, with which she has been politically united since 1380 (or 1397), in language, in character, and in habits, and she has therefore struggled for autonomy, a large measure of which she obtained in 1874. She has had some economic grievances, but sentiment has been an even stronger element in her discontent, which, however, stopped short of a wish to separate, as she feels herself too small to stand alone. A strong party in Norway has desired to be divorced from Sweden, to which she was unnaturally yoked in 1814 by the Congress of Vienna, not merely in respect of specific complaints regarding the Foreign Office and the consular service, but also because her people, though Lutherans like the Swedes, are far more democratic in ideas and temper than the latter, and because their high national pride makes them unwilling to appear to be in any way subordinate to the sister kingdom. The case of Poland is a simple one, because she has the memory of an independent kingdom destroyed by force and fraud, and is different in religion, as well as in speech, from the Russians who have annexed her. Had the peasant population of the country shared the patriotism of the upper and middle classes, Poland might possibly have succeeded in shaking off the yoke. Even now her disaffec-

tion is a source of weakness to Russia. In Ireland several currents of discontent have joined to produce the passion and prolong the struggle for autonomy, or, in a very few of the more ardent minds, for independence. There is the diversity of faith, which remains, though that of language has almost vanished, a diversity embittered by recollections of persecution. There are economic grievances, the memory of the destruction of an industry in the last century, the more urgent resentment at the exactions of landlords, and the peasants' desire to have a grip of the soil. There is an incompatibility of character and temperament, due partly to historical conditions, partly to the old antagonism of Celt and Teuton. All these have gone to create a passion among the people to be recognized as a nation controlling its own affairs, a passion which is the same in essence among those who would be content with the possession of a subordinate legislature, and those, now fewer than formerly, who would like to go further.

If the sources of the centrifugal force in Ireland are easily explicable, and indeed so strong that had this force acted upon the whole nation instead of only upon a majority which consists mainly of the poorer and weaker part of the population, it would have before now prevailed, those which induced the secession of the Southern States of America are much less evident. Here there was no religious factor, nor any revengeful feeling, nor any sense of an unjust or oppressive control. The South had obtained more than its fair share of power and influence in the councils of the Union. But the planters had persuaded themselves that property in slaves and the whole slave-holding system were threatened by the growing strength in the Northern and Western States of an aversion to slavery, with a determination to check its extension; and the irritation of feeling which a long struggle had engendered, coupled with a growing dissimilarity of habits and ideas, enabled the hot-headed oligarchy which controlled the Southern

population to drive it into separation. Possibly these causes would not have been strong enough to provoke an armed conflict in a unified country. It was the existence of State Governments, and the conviction that the rights of the States, supposed to be guaranteed by the Constitution, furnished a legal basis for secession, that spurred the South into its desperate venture.

What then can the framing, or the manipulation in working, of a Constitution do to reduce the power of such disruptive tendencies as we have been considering?

They may of course be resisted by the employment of physical force. If a government is sufficiently strong and resolute, and is supported by the great majority of the nation, it may crush down the discontent of a province or a section. It is however an axiom in free gov-¹ernments, and ought to be an axiom in all governments,¹ that physical force should never be used when peaceful¹ means will suffice. Coercion usually seems easier, and naturally commends itself to the dull, the impatient, and the violent, to imperious princes, arrogant ministers, and excited majorities. But coercion, besides being a fatal expedient if it fails, is often a bad expedient when it appears to succeed, for it leaves smouldering discontent behind among the vanquished, and it is apt to inflict a moral injury upon the victors, perhaps to warp for the future their frame of government and to lower their political traditions. Accordingly whenever a Constitution can be so drawn and worked as to give the disjunctive tendencies just so much recognition as may disarm their violence, and bring all sections of the nation and all parts of the country to acquiesce in unity under one government, this course is to be preferred. It may sometimes fail. Every expedient may fail. But it has generally more promise of ultimate success than force has, for in a free country force is not a remedy, but a confession of past failures and a postponement of dangers¹ likely to recur.

Among the methods which a Constitution may em-

ploy for the purpose indicated, the following find a place.

It may enact certain securities against oppression, whether by the executive or by the legislature, giving to such securities a specially solemn sanction, and thus reassuring the minds of the citizens. This was done by Magna Charta, by the Petition of Right, and again by the American Federal and State Constitutions, and by the French Declaration of the Rights of Man of 1789. It is usually done for the protection of all subjects or citizens alike, but of course the benefit of such a protection enures with special value for any section of the population, or any province or group of provinces, likely to be specially exposed at any given time to the abuses of power, because they are a minority whom the Government, or the majority, may view with disfavour.

A Constitution may provide means for varying the general institutions or laws of the State in such a way as to exempt particular parts of the State from any legislation that might be opposed to their special interests or feelings. The retention of Scotland as a distinct kingdom after the union of the crowns in 1603, and as a distinct part of the United Kingdom after the Treaty and Act of Union in 1707, has had most beneficial effects in enabling Scotland to be treated separately where it is fitting she should be. Her faith, her laws and judicature, her system of local government, have remained almost intact, to the satisfaction of her people, and with no injury to the cohesion of the united monarchy¹. Similarly the maintenance of Finland as a separate Grand Duchy, with her own tongue, religion, laws and privileges, guaranteed by the coronation oath of the Czar, has made the Finns loyal and contented subjects, and has in no wise detracted from the strength of Russia². The cases

¹ Though it must be admitted that the passing of legislation disapproved by the majority of Scotch representatives, or the omission to pass legislation which they demand, often elicits murmurs.

² This wise policy seems unfortunately to be now (1900) on the point of being abandoned, with results which every lover of freedom and progress must regret.

of Hungary as towards the Austrian Monarchy, and of Croatia as towards Hungary, are also in point.

It may provide for relegating certain classes of affairs to local legislatures, such as those of Croatia or Finland, areas which are not only, like Scotland, political divisions retaining their old laws, but also, unlike Scotland, since the Union, communities enjoying local autonomy. All Federations are managed on this system; and one can see in the case of Canada the advantages it secures, for the Roman Catholics of Quebec are able to have legislation diverse from that which the Protestant majority desires in the other provinces of the Dominion.

It may assign certain administrative and, within limits, certain legislative functions also to the inhabitants of minor local areas, such as counties, empowering them to regulate their local affairs in their own way. Provisions of this nature are not usually embodied in European constitutional instruments. They are, however, to be found in the State Constitutions of the American States. And they are really, in substance, parts of any well-framed Constitution, for nothing contributes more to the smooth working of a central government and to the satisfaction of the people under it, than the habit of leaving to comparatively small local communities the settlement of as many questions as possible. The practice of local self-government and the love for it are not a centrifugal force, but rather tend to ease off any friction that may exist by giving harmless scope for independent action, and thus producing local contentment. It is only where there exist grievances fostering disruptive sentiments that the existence of local bodies with a pretty large sphere of activity need excite disquiet.

It may exclude certain matters altogether from the competence of the central government, and thereby keep them out of the range of controversy. This principle has been wisely followed in the American and Canadian and Swiss Federal Constitutions as regards religion in its relations to the State. In some federations it has

been similarly found desirable to disable the several legislatures from dealing with topics likely to produce dissensions among the members of the federation, or otherwise to affect the cohesion of the nation. Thus in the United States no State legislature can impose any duties on goods brought from one State to another, nor in any wise interfere with commerce between the States.

By these means a Constitution may prevent the disruptive forces in a country from threatening the stability of the central government or the unity of the State. To remove part of the material on which they might work is to weaken their working, and to divert into safe channels the political activity they would evoke. Although a Flexible Constitution may accomplish this, if those who work it respect certain fundamental principles and treat their querulous minorities in a conciliatory spirit, the work is best done, and usually has been done, by a Rigid Constitution, because this latter provides a guarantee to minorities, or to subdivisions of the country, stronger than they can have under an omnipotent legislature. In fact the existence of the grounds of contention and possibilities of disruption we have been considering is among the chief causes which have called Federal Governments and Rigid Constitutions into being.

One further observation should be made before quitting this part of the subject. Racial differences and animosities, which have played a large part in threatening the unity of States, are usually dangerous only when the unfriendly races occupy different parts of the country. If they live intermixed, in tolerably equal numbers, and if in addition they are not of different religions, and speak the same tongue, the antagonism will disappear in a generation or two by social intercourse and especially by intermarriage. When the right of full legal intermarriage had been established, the fusion of the patricians and the plebs at Rome began. So the Northmen in the tenth and eleventh centuries, so the Norman-French in the eleventh and twelfth centuries, became

blent with the English. The Magyars and Saxons, though generally occupying different parts of the country, and to some extent retaining each their own speech, have in Transylvania now begun to melt into one. It is the fact that they not only speak a different tongue but also profess a different faith that keeps the Rumans of that province apart from both Saxons and Magyars; and even these differences might in time cease to operate did not these Rumans look across the mountains to a large Ruman State into which they would gladly be absorbed. But in one set of cases no fusion is possible; and this set of cases forms the despair of the statesman. It presents a problem which no Constitution has solved. It is the juxtaposition on the same soil of races of different colour.

This is a recent phenomenon in history. In the ancient world, almost all the barbarous tribes whom Rome subdued and brought into her Empire were sufficiently near the Italians and Hellenized Asiatics in physical characteristics for intermarriage to go on freely. The Carthaginians, who to be sure were not numerous, seem to have soon lost their distinctive nationality: and that the Jews remained distinct was their own doing, not that of the conquerors¹. Even as towards Egyptians and Numidians, who were certainly dark, one hears of little repulsion. Besides, both races were intelligent, and the former in their way highly civilized. With the African slave trade a new and a dolorous chapter in history opens. In our own time it is the settlement of Europeans in countries where the native holds his ground against the settler, as the Kafir does in South Africa, and the aboriginal Peruvians and Araucanians do in Western South America, or it is the influx of coloured immigrants, like that of the Chinese in Western America and the Hawaiian Isles, that raises, or threatens to raise in

¹ In two respects the Jews under the early Empire would seem to have been above the average level of the civilized subjects of Rome. There was apparently very little slavery among them; and there must have been an exceptionally large proportion of persons able to read.

the future, this problem in an acute form. A community in which there exist two or more race-elements physically contrasted and socially unsusceptible of amalgamation cannot grow into a really united State. If the coloured people are excluded from political rights, there is created a source of weakness, possibly of danger. If they are admitted, there is admitted a class who cannot fully share the political life of the more civilized and probably smaller element, who will not be consoled by political equality for social disparagement, and who may lower the standard of politics by their incompetence or by their liability to corruption. If the people of colour are dispersed over the country among the Europeans, instead of dwelling in masses by themselves, they may not act as a centrifugal force, threatening secession, but they are a serious hindrance to the working of any form of popular government that has been hitherto devised, for they divide the population, they complicate political issues, they prevent the growth of a genuinely national opinion.

The most noteworthy attempts that Constitutions have made to deal with these cases have been made in the United States, where the latest amendments to the Federal Constitution provide protection for the negroes and forbid the States to exclude any person from the electoral suffrage in respect of race or colour, and where several recent State Constitutions have devised ingenious schemes for disfranchising the vast mass of those whom these very amendments have sought to protect. So far as political rights are concerned, the problem is very far from having been solved in the United States. But as regards private civil rights, it has certainly been an advantage to the negroes that the Federal Constitution guarantees such rights to all citizens: and probably in any country where marked differences, with possible antagonisms, of race exist, it will be prudent to place the private civil rights of every class of persons under the equal protection of the laws, and to make the rights

themselves practically identical. It would lead me too far from the main subject to describe the ways in which similar problems have been dealt with in Algeria, in South Africa, and in some of the other colonies of European nations. Nowhere has any quite satisfactory solution been found¹. But the case of New Zealand deserves to be mentioned as one in which the experiment has been tried of giving parliamentary representation to the natives, who mostly live apart on their own reserved lands. So far, the results have been good. The conditions are favourable, for the Maoris are a brave and intelligent race, and they are now too few in number to excite disquiet.

It was the good fortune of the Roman Empire that the vast majority of the races whom it conquered and absorbed had no conspicuous physical differences from the Italians which prevented intermarriage and fusion. Race and birthplace were no great obstacle to a man of force. Two or three of the Emperors were of African or Arab extraction. Moreover, the peoples of Southern Europe seem to have less repulsion of sentiment towards the dark-skinned races than the Teutons have. The Spanish and Portuguese intermarry not only with the native Indians of Central and Southern America, but also with the negroes. The French of Canada intermarried more freely with the Indians of North America than the English have done.

Summing up, we may say that the aim of a well-framed Constitution will presumably be to give the maximum of scope to the centripetal and the minimum to the centrifugal forces. But this presumption is subject to two countervailing considerations. One is that the energy of civic life may be better secured by giving ample range and sphere of play to local self-government, which will stimulate and train the political interest of the members of the State, and relieve the central au-

¹ In Algeria the electoral suffrage is limited ; but in some of the French tropical colonies it seems to have been granted irrespective of colour.

thority of some onerous duties. The other is that the centrifugal forces may, if too closely pent up, like heated water in the heart of the earth, produce at untoward moments explosions like those of a volcano. Hence it is well to provide, in the Constitution, such means of escape for the steam as can be made compatible with the general safety of the State. Where a Constitution, and especially a Rigid Constitution, has been framed with due regard to these considerations, and turns to account the methods already discussed, it may itself become a new centripetal force, a factor making for the unity and coherence of the community which lives under it. The Rigid Constitution has in this respect one advantage over the Flexible one, that it is more easily understood by the mass of the people, and more capable of coming to form a part of their political consciousness. When such a Constitution is so contrived and worked as to satisfy the bulk of the nation—and it will do so all the more if no single section dislikes it—it attracts the affection and pride of the people, their pride because it is their work, their affection because they enjoy good government under it. Time, if it does not weaken these feelings, strengthens them, because reverence comes with age. By providing a convenient channel or medium through or in which the centripetal forces may act, the Constitution increases the effective strength of those forces. It is a reservoir of energy, an accumulator, if the comparison be permissible, which has been charged by a dynamo, and will go on for some time discharging the energy stored up in it. But, like an accumulator, its energy becomes exhausted if there is not behind it an engine generating fresh power, that is to say, if the real social and political forces which called it into being have become feebler, and those which oppose it have become stronger.

V. ILLUSTRATIONS FROM MODERN HISTORY OF THE
ACTION OF CONSTITUTIONS.

The best instance of the capacity of a Constitution to reinforce and confirm existing centripetal tendencies is supplied by the history of the Rigid Constitution of the United States. That instrument was at first received with so little favour by the people that its ratification was, in many States, obtained with the greatest possible difficulty, and the original document secured acceptance only on the understanding, which was loyally carried out, that it should forthwith receive a number of amendments. Within fifteen years the party which had advocated it was overthrown in the country, and ultimately broke up and vanished. A generation passed away before it began to be generally popular. But after a time it secured so widespread a respect that even during the fierce and protracted struggle which ushered in the Civil War few attacked the Constitution itself, nearly all the combatants on one side or the other claiming that its provisions were really in their favour. It was not round the merits, but round the true construction, of the instrument that controversy raged. Since the Civil War, and the amendments which embodied the results of the Civil War, it has been glorified and extolled in all quarters¹, and has unquestionably been a most potent influence in consolidating the nation, as well as in extending the range and the activity of the central government.

To what is this success due? Regarded as a Frame of Government, *i.e.* as a piece of mechanism for distributing powers between the Executive, the Legislature and the Judiciary, the American system has probably been praised beyond its deserts. Both the mode of electing the President and the working of Congress leave much to be desired. But the Constitution has had two conspicuous merits. It so judiciously estimated the

¹ Only since 1890 have complaints begun to be made: see Essay III, p. 202, ante.

centripetal and centrifugal forces as they actually stood at the time when it was framed, frankly recognizing the latter and leaving free play for them, and while throwing its own weight into the scale of the centripetal, doing this only so far as not to provoke a disjunctive reaction, that it succeeded in winning respect from the advocates both of States' Rights and of National Unity¹. Thus it was able to add more strength to the centripetal tendency than it could have done had it been originally drawn on more distinctly centripetal lines. For—and here comes in the second merit—its provisions defining the functions of the central Government were expressed in such wide and elastic terms as to be susceptible of interpretation either in a more restricted or in a more liberal way, *i.e.* so as to allow either a less wide or a more wide scope of action for the Central Government. During the earlier years, when State sentiment was still stronger than National sentiment, the scope remained limited, because both the executive and the legislature wished to keep it so, and such extensions as there were came from judicial construction. But latterly, and especially since the prodigious development of internal communications has stimulated commerce, and since the death blow given to States' Rights doctrines by the Civil War, the scope has been widened, and has widened quite naturally and gradually, with no violence to the words of the Constitution, but according to that expansive interpretation of them which changing conditions and a corresponding change in national sentiment prescribed².

Nowadays one hears in the United States less about the Constitution than about the Flag³. But that is

¹ It has been accused of having caused a civil war by omitting to deal with the questions out of which the Civil War arose, and by failing to negative the right of secession. But to this it may be answered that an attempt to deal with those questions or to negative that right might possibly have prevented it from having ever been accepted.

² This interpretation has sometimes been at variance with the views of the older interpreters, but no instance occurs to me in which an impartial jurist could have pronounced it inadmissible.

³ This is still more so to-day (1900) than it was when this Essay was first composed.

partly because the Constitution has done its work, and made the Flag the popular badge of an Unity which it took nearly a century to endear to the nation.

One might go on to illustrate the efficiency of a Constitution in consolidating a people composed of disparate elements from the parallel case of Switzerland, where communities speaking three (it might almost be said four) different languages have been brought much closer together by the Constitutions of 1848 and 1874 than they were before, or could have been without some such arrangement. Switzerland, however, is a more complicated case, because much has turned on the external pressure towards unity exerted by the fear felt for several great bordering Powers. The formidable neighbours of the Confederation have, so to speak, squeezed together into a Swiss people the originally dissimilar Alemannic, Celto-Burgundian, Italian, and Romansch communities.

The two instances of the United States and Switzerland¹, compared with those of unitary countries living under Rigid Constitutions, such as France, Belgium, Holland and Denmark, suggest the observation that the service which Rigid Constitutions may render in strengthening the centripetal tendency, can best be rendered where a Federation is to be constructed. For in these cases what is needed is an arrangement by which the several rights of the component communities which are to form the State may be so protected that they need not fear to give their allegiance to the State and cordially support its Central Government. The exist-

¹ One would like to refer to the cases of the numerous so-called republics, most of them federal, of Spanish America. But apart from the difficulty of ascertaining their constitutional history, little of which has been written, some of these republics seem to pay so little regard to their constitutions, living generally in a state of revolution, whether subsiding, or actually raging, or apprehended, like the Atlantic during a series of cyclones following one another along the same track from the Bermudas to the Fastnet, that it is hard to draw any conclusions of value from them. They are in fact republics only in name: and it is surprising that Sir H. Maine in his *Popular Government* condescended to go to them for arguments to discredit democracy. They are military tyrannies, the product of peculiar historical, territorial and racial conditions.

ence of such communities is an expression of forces actually operative which are centrifugal as towards the State as a whole, and therefore need to be studied. By giving a carefully limited scope to these forces, and thereby diminishing their possibilities of danger, the Constitution subserves the cohesion of the States. In a truly unitary country this service is not needed. But there are cases in which States endeavouring to become unitary would have done better had they sought to apply the federal principle, placing it under the protection of a Rigid Constitution. I have already referred to Denmark. Holland might probably have saved Belgium by a concession of some such kind. Whether a similar contrivance might not have been profitably employed within the British Isles in A.D. 1782, or in A.D. 1800, or again later, is a question which will already have presented itself to one who has followed the argument thus far.

In dwelling upon the services which Constitutions may render, by fostering the centripetal forces, or by restraining the violence and softening the action of the centrifugal forces, we must not forget that no scheme of government can hope permanently to resist the action of either tendency if either develops much greater strength than it possessed when the Constitution was framed. If the centripetal forces grow, the Constitution whose provisions have recognized and given scope to the centrifugal will be practically, in some of those provisions, superseded. If the centrifugal grow, it may be overthrown. It is where the forces are nearly balanced, that the weight of the Constitution may turn the scale, and avert conflicts which would have rent the community, or caused a violent subjection of one part of it to the other. And in any case the Constitution ought, where dissimulative and disruptive forces are feared, to be so drawn as to enlist all available motives of interest, to shelter the law behind popular sentiment where possible, to oppose it to sentiment as little as possible, and

to avoid challenging at the same time the hostility of several kinds of sentiment.

VI. THE PROBABLE ACTION OF THE AGGREGATIVE AND THE DISJUNCTIVE TENDENCIES IN THE FUTURE.

Whether in the long run it is the centripetal or the centrifugal force that will prevail in politics, or, in other words, whether large States or small States are more likely to commend themselves to mankind, is a question which belongs rather to history than to the doctrines of constitutions, and which could be adequately discussed only after a long investigation. History shows us first one force dominant, then the other, though no doubt the centrifugal is usually more powerful in rude times and in hilly or mountainous countries, the centripetal in countries comparatively advanced in civilization, and in level and fertile regions where wealth is more easily acquired and stored, and where military operations are easier. When the mists of antiquity begin to rise sufficiently to show us the Mediterranean and south-west Asiatic world, we discover both a few great States and a multitude of small ones. The former have a low, the latter a high and intense political vitality. From the time of Menes down to that of Attila the tendency is generally towards aggregation: and the history of the ancient nations shows us, not only an enormous number of petty monarchies and republics swallowed up in the Empire of Rome, but that empire itself far more highly centralized than any preceding one had been. When the Roman dominion began to break up the process was reversed, and for seven hundred years or more the centrifugal forces had it their own way. Europe and Western Asia were divided up among innumerable petty potentates, and even the large monarchies, such as the two Khalifates, the Romano-Germanic Empire, the kingdoms of France and Hungary, possessed so feeble a royal authority that the real organs of government and

centres of attraction were to be sought rather in the vassals than in the nominal sovereign. From the thirteenth century onwards the tide begins to set the other way. One great State indeed—the Empire—first decays and then disappears under the action of centrifugal forces, but all the other chief States expand, absorbing their smaller neighbours, and giving themselves a compact and well-knit organization which makes the central power effective through the whole sphere of its action. This process culminates in the despotic monarchies of the eighteenth century, when the strength of feudal localism has been completely broken, though the picturesque relics of it still cumber the ground, and when at the same time the foundations are laid in the West of a gigantic State which proceeds to cover the temperate area of North America between the two oceans, and, in the East, of the dominion of a European nation which has absorbed the numerous and populous principalities of India. Immediately afterwards the doctrine of popular self-government and the doctrine of nationalities come upon the scene, threatening a disruption of some existing political aggregates. In point of fact, however, these new principles have done as much to unite as to sever, for though five States—Greece, Rumania, Servia, Montenegro and Bulgaria—have been cut off from an effete monarchy, and sixteen republics have been carved out of the American dominions of Spain and Portugal, the doctrine of nationality has substituted two new great States, more important than all the last-mentioned twenty-one put together, for the multitude of kingdoms and principalities which so late as 1859 filled Italy and Germany.

Thus neither Democracy nor the principle of Nationalities has, on the balance of cases, operated to check the general movement towards aggregation which marks the last six centuries.

It may, however, be said—and this question should be faced before we proceed to inquire whether the aggre-

gative movement is likely to continue—that in all this inquiry we have been ignoring two potent factors. One is Conquest—that is to say, military power. We have been examining the forces of Interest and Sympathy, which cover a number of influences social or economic, racial or sentimental. But after all it is Conquest, *i.e.* the might of the strongest, which has created most States as we find them. Is Conquest one of the centripetal forces? and if so, is it not the greatest of them?

The other factor is Family Succession, which both during the Middle Ages and since has done a great deal to consolidate principalities and kingdoms. The United Kingdom owes much to this agency, Austria and France even more.

Conquest and Dynastic Succession are hardly fit to be classed among the centripetal forces, because they are not susceptible of scientific treatment like the other influences. The disposition of the stronger to subdue and annex the weaker neighbour is of course a permanent fact in human nature, and therefore in history. But in each particular instance the success of one or other combatant depends on what may be called historical accidents—on the numbers or the discipline of troops, on the possession of a commander of military genius, on alliances with other states, on the internal dissensions of one state as compared with the unity of another. Physical force belongs to a different sphere from that in which political constitutions work. Constitutions may result from a conquest or may be maintained for a time by arms; but if they are obliged to rely on and have constant recourse to physical force in order to prevent their overthrow, they are, considered as Constitutions, failures; because the very nature and object of a constitutional Frame of Government is so to express and so to adjust to existing conditions the wishes and aims of the citizens as to make the majority, and if possible the vast majority, of the people desire to support it. According to the proverb, you can do anything with bayonets except sit down on

them. Physical force is of course needed to punish occasional infractions of the Constitution or to quell revolts against it. But the system of government which *ex hypothesi* corresponds to the permanently strongest among the moral forces, else it has no right to prevail in a free country, ought not to be surrounded by cannon.

Similarly, the devolution of princedoms or kingdoms by marriage and inheritance, much as it has done to bring States originally independent under one government, lies outside political science in the proper sense of the term. Like conquest, it brings about a new state of things by an event with which the ordinary political and constitutional phenomena of national life have nothing to do, coming into these phenomena as an incommensurable and (so to speak) irrational factor¹.

So soon as either conquest or a union due to hereditary succession has taken place, the normal centripetal and centrifugal tendencies resume their action. Where the territory of one people has been forcibly acquired by another, as Lombardy was acquired by Austria in 1815, or has been occupied in virtue of a title based on succession, as Portugal was claimed by Spain in 1580, such centripetal forces as may exist have the advantage of physical force behind them. But this advantage may be unavailing against the stronger forces which sentiment sends forth to dissever the connexion. Austria lost Lombardy after forty-four years; Spain lost Portugal after sixty. In both cases there was fighting, but it was not so much the balance of military strength as the settled hostility of the subjected people which in both caused the severance. So the acquisition by the English kings of Aquitaine and the subsequent conquest

¹ The fact that the custom of a country permits or forbids succession through females makes a great difference in the importance of succession. The union of Castile with Aragon, like the union of England with Scotland, would not have occurred under a different rule of succession. So it may make a difference whether the throne of the larger country passes to the dynasty of the smaller, or vice versa. Had a king of England inherited the throne of Scotland, Scotland might have been more hostile to England. Had a king of Portugal inherited the throne of Spain, the two countries might have remained united.

of large part of France, the conquest by the Turks of Transylvania, the union of Holstein with Denmark, the union of Belgium with Holland, the union of Alsace with France, all effected without regard to the will of the people, were all in time brought to an end. The last-mentioned case is a peculiar one. It was not because the Alsatians wished to be reunited to Germany, but because the Germans wished to be reunited to Alsace that a connexion which had lasted nearly two centuries was dissolved in 1871. Military motives, decisive as regards the annexed part of Lorraine, had something to do with the taking of Alsace also; but if Alsace had not been German in language and habits, though not in sentiment, the popular voice of Germany would not have insisted on recovering it against the will of its inhabitants.

Speaking broadly, one may say that Conquest and Inheritance give an opportunity, better in the latter than in the former case, for centripetal forces to work. If the peoples on which they operate are backward, with no pronounced national feeling, that chance may be a good one, and the influences of free commerce, joint government (especially if it is good government), together with the kind of pride which common service in war often produces, may operate to weld two peoples together into a united State. Much depends on language, much on geographical position, much on external pressure from powerful neighbours. But if one of the peoples (or both) has already developed a strong sentiment of nationality, the prospect of fusion is but slender.

The Roman Empire is the capital instance of a vast dominion established by conquest. But there it was the weakness of the centrifugal forces that secured the cohesion of the Empire. The conquered countries were either, like Gaul, Spain and Britain, occupied by tribes between whom there existed so weak a bond that no general national feeling or combined national action was possible, or had been, as in the Eastern Mediterranean

World, ruled by dynasties, most of them sprung from military adventurers¹, so that the sentiment of national life had not centred in the monarchy. The centrifugal forces of interest—the desire for peace, good government, facilities for commerce, and so forth—obtained free play under the imperial administration, and to these was added after a time the sense of pride in Roman citizenship, and in the greatness of a State which included all the highest civilization of the world. So too during the Middle Ages not a few conquests ended in an assimilation of the vanquished, which enlarged without weakening the conquering nation. But during the last three centuries the experience of military powers has been that the acquisition of masses of subjects who, being already civilized, are likely to resist absorption and to remain disaffected, is a doubtful gain and may become a danger to the conquering State. The last conspicuous instance is Poland, partitioned between three Powers, to all of whom her provinces have brought trouble. Conquests continue to be made, but they are now mostly of barbarous or semi-civilized races, so inferior to the conquerors in force and in national spirit that the centrifugal forces are, or at least seem to be, practically negligible.

Is it possible, then, to arrive at any conclusion regarding the respective strength which these two sets of forces are likely to display in the coming centuries? Will the tendency to aggregation continue, and does the future belong to great States? Or may new forces appear which will reverse the process, as it was reversed, though through causes most unlikely to reappear, at the fall of the Roman Empire?

At first sight the probabilities seem to point to further aggregation. Although none of the five great na-

¹ There were of course also a certain number of city republics, or leagues of republics, but these were too small to have developed national feeling in the modern sense; and the Roman system left most of them a certain measure of self-government which modified their regret for an independence the delight in which had been (in many cases) reduced by domestic disorders.

tional States—Russia, Germany, France, Italy, Britain—is in the least likely to be absorbed by any of the others, there is reason to think that within the next century some of the smaller states will have disappeared from the map of Europe. In one or two other parts of the world—as for instance in South and in Central America—the process by which the great States are expanding is not yet complete. The influences of swifter and cheaper communications by land and sea, of increasing commerce, and of the closer intercourse which commerce brings, of the power exerted by the printing press in extinguishing the languages which prevail over a small area and diffusing those spoken by vast masses of men—all these things make for unity within each of the great States and add to the attractive power which the greater have for the smaller. These influences, moreover, all promise to be permanent.

Against them we must set the fact that Conquest, so far as civilized peoples are concerned, seems likely to play a smaller rôle in the future than in the past, because it begins to be perceived how tenacious is the sentiment of nationality in a vanquished people, and how much the maintenance of that sentiment may endanger the victor State. As was observed in an earlier page, the progress of a community in civilization often tends to intensify both its capacity for political discontent and its peculiar national sentiment, thus counterworking the influences of trade and wealth. A people, or a nationality included in a large State, while feeling the centripetal forces of material interest, may nevertheless feel the repellent instinct of an unquenched attachment to its national traditions and cling to the hope of reviving its old national life.

The problem is, however, a far more complex one than any comparison of the influences of material interest on the one side and national sentiment on the other would suggest. Many phenomena may be imagined which would affect it as the world moves on. One is a change

in the conditions under which war is waged. Another is a removal of some of the causes which induce war, or a means, better than now exists, of averting its outbreak. Another is the growth of what is called Collectivism and a disposition to apply its principles in small rather than in large areas, seeing that there are obviously some things which can be better managed in the former. We are far from having exhausted the possibilities of the influence of scientific discovery upon economic life, and through it upon social and political life. Both the relations of Nations and States to one another and the relations of the groups or communities within each State to each other may be affected in ways as yet scarcely dreamt of. Neither can we foresee the modes in which the scientific way of looking at all questions may come ultimately to tinge and modify men's habits of thought even in social and political matters. No institution was at one time more generally prevalent over the world, or seemed more deeply rooted, than Slavery; and slavery, which has now vanished from civilized communities, will soon have vanished from all countries. There is indeed hardly any institution for which permanence can be predicted except—and some will not admit even this exception—the Family.

Imagine a world in which all the hitherto unappropriated territories had been allotted to one or other of the few strongest States. Imagine tariffs abolished and the principle of equality of trade-facilities among States established. Imagine a system of international arbitration created under which the risks of war were so greatly reduced that the prospects of war did not occupy men's minds and give a military and aggressive tinge to their patriotism. The present relations of centripetal and centrifugal forces would under such conditions be greatly altered, as respects both the wide theatre of the world and the internal conditions of each particular State.

Imagine also a great advance in the desire to use gov-

ernmental agencies for the benefit of the citizens, and a general conviction that such agencies could best be used by comparatively small communities rather than by the State as a whole. A new centrifugal force, centrifugal at least in respect of each State, would thereby have been called into action. No one will venture to foretell any of these things. But none of them is impossible; and it is plain that they might produce a set of conditions, and a play of forces, unlike the present, and unlike any period in the past. We must not therefore assume that the large States and the present structure and organization of States will be permanent.

Of the more remote future, History can venture to say little more than this—that it will never bring back the past. She recognizes that, as Hēraclītus says, one cannot step twice into the same river. Even when she is able to declare that certain forces will assuredly be present, she cannot forecast their relative strength at any given moment, nor say what hitherto unobserved forces they may not, in their action upon one another, call into activity. All she can do for the lawyer, the statesman and the legislator, when they have to study and use the forces operative in their own time, is to indicate to them the nature and the character, the significant elements of strength and weakness, that belong to each and every force that has been heretofore conspicuous, so as to direct and guide them in observing and reflecting on the present. This is much less than has sometimes been claimed for history. Nevertheless it is a real service, for nothing is more difficult than to observe exactly, and the ripest fruit of historical study is that detachment of mind, created by the habit of scientific thinking, which prevents observation from being coloured by prejudice or passion.

V

PRIMITIVE ICELAND

ICELAND is known to most men as a land of volcanoes, geysers and glaciers. But it ought to be no less interesting to the student of history as the birthplace of a brilliant literature in poetry and prose, and as the home of a people who have maintained for many centuries a high level of intellectual cultivation. It is an almost unique instance of a community whose culture and creative power flourished independently of any favouring material conditions, and indeed under conditions in the highest degree unfavourable. Nor ought it to be less interesting to the student of politics and laws as having produced a Constitution unlike any other whereof records remain, and a body of law so elaborate and complex that it is hard to believe that it existed among men whose chief occupation was to kill one another.

With the exception of Madeira and the Azores, Iceland is the only part of what we call the Old World¹ which was never occupied by a prehistoric race, and in which, therefore, the racial origin of the population is historically known to us.

None of those rude tribes who dwell scattered over the north of Asia, Europe and America—Lapps, Samoyedes or Esquimaux—ever set foot in it. Adamnan, Abbot of Iona from A. D. 679 to 704, reports in his famous

¹ Though geographically Iceland belongs rather to North America than to Europe, geologically its affinities are with the Cape Verde Islands, the Canaries, Madeira, and possibly the Azores to the South, with Jan Mayen to the North, as it seems to owe its origin to a line of volcanic action stretching from the Cape Verde Islands to far beyond the Arctic Circle.

*Life of St. Columba*¹, a prophecy of the saint regarding a holy man named Kormak, who, in Columba's days (A. D. 521-597), made three long voyages from Ireland in search of the 'Desert in the Ocean' (*eremum in Occano*), a term so happily descriptive of Iceland that one is tempted to believe it to be the region referred to. A little later the Venerable Bede (A. D. 673-735) speaks of contemporaries of his own who, coming from the isle of Thule, declared that in it the sun could be seen at midnight for a few days². Still later the Irish monk Dicuil (writing about A. D. 825) tells³ of an isle lying far to the North-West where monks known to him had spent the summer some thirty years before. And our earliest Icelandic authority, the famous *Landnámabók* (Book of the Land-takings), mentions that when the first Norwegian settlers arrived they found a few hermits of Irish race already established there, who soon vanished from the presence of the stronger heathen, leaving behind books, bells and staves (probably croziers). The Norse settlers called them Papas (*i. e.* priests), or Westmen, a term used to describe the Scots of Ireland. No doubt, then, the earliest discoverers of the isle were these Celtic hermits, who had crossed the wide and stormy sea in their light coracles of wood and leather, consecrating themselves to prayer and fasting in this inclement wilderness. But they contributed no element to the population of the island, and can hardly be said to have a place in its history, which begins with the great Norwegian immigration.

The first Teuton to reach Iceland was a Norse Viking named Naddoð, who was driven to the isle by a storm in

¹ *Vita S. Columbæ*, cap. vi.

² Comment. on 2 Kings xx. 9. The extreme northernmost point of Iceland just touches the Arctic Circle.

³ In his book *De Mensura Orbis Terræ*, cap. 7, he identifies the isle with Thule; and the reports of the monks point rather to Iceland than to the Faeroe Isles, a group which Dicuil mentions elsewhere, and which therefore he cannot mean by his Thule. The name Thule has of course been applied by different writers to different lands. When Tacitus says that it was seen in the distance by the fleet of Agricola, he probably means either Shetland or the Fair Isle between the Shetlands and the Orkneys.

the latter half of the ninth century. He called it Snæland, or Snowland. A second visitor, a Swede named Gardar, sailed round it; a third (Flóki, a Norseman) landed, and gave it the name it still bears. But though the news of the discovery soon spread far and wide through the whole Northland, the isle might possibly have lain unoccupied but for the events that were passing in Norway. King Harald the Fairhaired was then in the full career of his conquests. The great battle of Hafrsfjord had established his power in Central and Southern Norway, and he was traversing the fjords with his fleet, compelling the petty chieftains who stood at the head of the numerous small independent communities that filled the country to acknowledge his supremacy, and imposing a tax upon the land-holding freemen.

The proud spirit of the warriors who for more than a century had been ravaging the coasts of all Western Europe could not brook subjection, and, being unable to offer a united opposition, the boldest and bravest among them resolved to find freedom in exile. Some sought the Orkneys, Shetlands and Faeroe isles, already settled by Northmen. Some joined the Norwegian settlers in Ireland, and drove the Celtic population out of some districts on its eastern coast. Others, again, followed Hrolf Ganger (Göngu Hrolfr) ('the Walker'), or Rollo as our books call him, a Viking who, having incurred the wrath of Harald, sailed forth from his home on the fjords near Bergen to found in Northern Gaul a dynasty of Norsemen whence came the long line of Norman dukes and English kings, *Albanique patres atque altae moenia Romae*. And yet others, hearing the praises of the lately-discovered isle far off in the ocean, turned their prows to the west and landed on the solitary shores of Iceland. They embarked without any concert or common plan; each chieftain, or head of a household, taking his own family, and perhaps a group of friends or dependents; and they settled in the new land where they pleased, sometimes throwing overboard as they neared

the shore the wooden columns, adorned with figures of Thor and Odin, of the high-seat in their old Norwegian hall, and disembarking at the point to which these were driven by the winds and currents. At first each took for himself as much land as he desired, but those who came later, when the better pastures had been already occupied, were obliged to buy land or to fight for it; and a curious custom grew up by which the extent of territory to which a settler was entitled was fixed. A man could claim no more than what he could carry fire round in a single day; a woman, than that round which she could lead a two-year-old heifer. So rapid was the immigration, many colonists from Norwegian Ireland and the Scottish isles, Orkneys, Shetlands and Hebrides (the two former groups being then Scandinavian) joining those who came direct from Norway, that in sixty years the population had risen (so far as our data enable it to be estimated) to about 50,000, a number which seems not to have been exceeded down to the census of A. D. 1823. With those who came from Ireland and the Hebrides there came some small infusion of Celtic blood, which we note in such names as Njál, Kjartan, and Kormak, given to men descended from the daughters of Irish chieftains.

Planting themselves in this irregular way, and in a country where the good land lay in scattered patches, and where deserts, glaciers and morasses, as well as torrents, passable only with difficulty or even danger, cut off one settlement from another, the first settlers did not create, and indeed felt little need of, any political or social organization. But after a time a sort of polity began to shape itself, and the process of its growth is one of the most interesting phenomena of mediæval history. The elements out of which it sprang were of course those two which the settlers had brought with them from Norway, and both of which were part of the common heritage of the Teutonic race—the habit of joint worship at a temple, and the habit of holding an assembly of all freemen to

discuss and dispatch matters of common interest, and more especially lawsuits¹. This assembly resembled the Old English Folk Mot, and was called the Thing, a name which survives in our English word Hustings (Husting or House Thing), the platform from whence candidates spoke at parliamentary elections, which disappeared in A.D. 1872 when written nominations were prescribed by the statute which introduced vote by ballot. The Þing² was held at the temple, usually dedicated to Thor, the favourite deity of the Norsemen as Oðin was of the Swedes; since the place of worship was the natural centre of the neighbourhood, and the þing was presided over by the local magnate or chief, who was usually also the owner or guardian of the local temple, there being among the Scandinavian peoples no special sacerdotal caste.

Now when a Norse chief settled himself in Iceland, one of his first acts was to erect a temple, often with the sacred pillars which he had brought from the ancestral temple in the old country. The temple soon became a place of resort, not only for his own immediate dependents, but also for those other settlers of the district who might not be rich enough to build and maintain a shrine of their own. Of this temple the chieftain and his descendants were the priests; and as the meetings of the local þing were held in it, he was the natural person to preside over such meetings, both because he was usually (though not invariably) eminent by his wealth and power, and also because he offered the sacrifices and kept the sacred temple-ring on which judicial oaths were taken, as at Rome men swore at the Ara Maxima of Hercules. Thus the priest acquired, if he had not already enjoyed it, the position of a sort of local chieftain or magnate, not unlike those kings of heroic Greece whom we read of in

¹ Not but what the habit of holding such an assembly has existed among peoples of very diverse race in many parts of the world. It existed among the Greeks. It exists among the Kafirs of South Africa.

² I use the Icelandic and Anglo-Saxon letter þ in this word to distinguish it from the common English word.

Homer, or those German tribe-princes whom Tacitus describes. Although his title was that of Goði¹ (originally Guði) or priest, a word derived from the name of the Deity, he lost in becoming the depositary of a certain measure of political power most of such religious character as his office had possessed. Nor did any sanctity attach to his person. In that age at least religion had come to sit rather lightly upon the Norsemen. Either from inner decay, or from the influence of the Christian peoples with whom they came in contact beyond the seas, the old faith was beginning to disintegrate. Worship was often cold or careless, and we read of men who regarded neither Þor nor Oðin, but trusted in their own might and main.

The Goði was therefore much more of a secular than of an ecclesiastical person, a chieftain rather than a priest in our sense of the word². His powers as a chieftain were very indefinite, as indeed had been those of the local chieftains of Norway. He was only the first among a number of free and warlike land-owners, some of them equal or superior to him in lineage, with an official dignity which was little more than formal in the hands of a weak man, but might be turned to great account by a person of vigour and ability. As he presided in the Þing, so he was the appropriate person to see to the regularity of its judicial proceedings, to preserve order, and to provide for the carrying out of any measures of common concern on which it might determine. When any unforeseen danger or difficulty arose, he was looked to to advise or take the lead in action; the members of his Þing expected aid and protection from him, while he, like a thegn among the Teutons of contemporary England, expected support and deference from them. But he had no legal powers of coercion. Any one might op-

¹ The term goði does not seem to have been used in Norway, but Ulfila, in his translation of the Bible into Gothic (in the fourth century A. D.), renders *iepeus* by *gudja*. The *ð* is pronounced like th in 'then.'

² It is true that as the Sagas whence we draw our knowledge of the Goði were all written down at a time when heathenism had vanished, it is possible that they may not fully represent the original character of the office.

pose him in the þing or out of it. Any þing-man might withdraw at pleasure, join himself to some other Goði, and become a member of some other þing¹. There was, it must be noted, no territorial circumscription corresponding to the þing. Land had nothing to do with the position held by the Goði to the þingmen, and herein, as well as in the absence of the relation of commendation and homage, we see a capital difference between this system and feudality. Nor was the post of Goði a place whence much emolument could be drawn. The þingmen were indeed required to pay a sort of tax called the temple toll (*hoftollr*), but this did no more than meet the expenses to which the Goði was put in keeping up the temple, and feasting those who came to the sacrifices; it gave him no revenue which he could use to extend his authority. Accordingly, the Goðorð was regarded as implying power rather than property, and was not (after the introduction of Christianity) liable to the payment of tithe. A curious feature of the office was its alienability. Probably because it had arisen out of the ownership of the temple, it was regarded as a piece of private property which could be transferred by way of sale or gift, and could be vested in several persons jointly. And similarly a number of Goðorðs might by inheritance or purchase become vested in the same person.

Thus in the years immediately following the immigration there sprang up round the coasts of Iceland a great number of petty, unconnected and loosely aggregated groups of settlers. We must not venture to call them states, scarcely even communities, not principalities,

¹ The illustrious Konrad Maurer, to whose learned researches and sound judgment every one who writes about the constitutional antiquities of Iceland must feel infinitely indebted, thinks that the name of Goði was used in Norway before the emigration to Iceland, though probably the priest was there a less important person than he became in Iceland, where his custody of the temple put him to some extent in the position held in the Norwegian motherland by the hereditary chieftain, who was in Norway the natural president of the local Thing.

Those who desire to study the early history of Iceland may be referred to the writings of Dr. Maurer, and especially to his *Island bis zum Untergange des Freistaats* (Munich, 1874), and his *Beiträge zur Rechtsgeschichte des Germanischen Nordens* (Munich, 1852).

such as those which were beginning to spring up in Western Europe, not in a strict sense republics, yet nearer to republics than to principalities, organized, so far as they were organized at all, chiefly for the purposes of justice, and particularly for the exaction of fines for homicide, but with no settled plan of government, no written laws—if indeed writing was yet in use at all—no defined territory, and a comparatively weak cohesion among their own members, the Thingmen. The really effective tie was, in those ages, the tie of kindred; and the Þingmen of the same Goði were not kinsfolk, were not a clan or sept, like the Celtic communities of Scotland and Ireland. That tie was strong enough to involve a whole district in the blood-feud of a single man. For when any member of a family was killed, it was the duty of his nearest relatives to avenge his death, either by obtaining a full compensation in money, for which, if the offender refused to pay it, a lawsuit was brought in the Þing, or else by slaying the murderer or some member of his family. Thus a feud, like a *Vendetta* in Corsica or in Eastern Kentucky, might go on from generation to generation, each act of revenge drawing others in its train, and tending to draw more and more families into the feud, because when fights took place, the friends of each party often joined, and if some were killed, their relatives had a new blood-claim to prosecute.

Between the different communities that had thus sprung up there was no political tie whatever. There did not as yet exist any Icelandic nation, much less any common Icelandic State of which all the communities felt themselves members. Each was an independent body; and if a dispute arose between the members of two different Þings, there was no means of adjusting it except by voluntary submission to the award of some other Þing or else by open war. Seeing that slayings and plunderings and burnings were everyday occurrences in this fierce race, where Vikingry (*i. e.* piracy) was the most honoured pursuit, such cases were very frequent, espe-

cially as to take revenge for a kinsman's death was deemed a sacred duty.

Even when the offender belonged to the same þing as the injured, it often happened that the influence of his kindred, or the favour of the Goði of the place, or some technical error in bringing the suit for compensation, prevented justice from being done. Accordingly the need for some remedy, for some further political, or rather judicial, organization of the island began to be generally felt, for however fond men may be of killing one another, the Norsemen were always also fond of money, and would often prefer a blood-fine to the satisfaction of killing their enemy, could the blood-fine be secured. Thus it came to pass that, about fifty years after the first colonization, a chief named Úlfjót, venerable from his age and abilities, came forward to propose a scheme. He urged the creation of one general þing for the whole country, where all matters of common interest might be discussed, and all suits which could not be dispatched, or had not been fairly dealt with in the local þings, might be decided. Travelling round the island, he brought over to his views the most influential Goðis and other leading men; and at their request, sailed to Norway to inquire into the laws prevailing there, and to draw up regulations for this new general þing; somewhat as envoys were, according to the Roman story, sent from Rome to the Greek cities to bring back materials and suggestions for the legislation of the Decemvirs. At the same time Úlfjót's foster-brother, Grím Geitskór ('Goat's Shoe'), the fleetest man and nimblest rock-climber in Iceland, was commissioned to traverse the island in search of a place suitable for the meeting of the proposed assembly. After long wanderings, Goat's Shoe hit upon a spot to which the name of þing Vellir¹, 'the plains of the þing,' has ever since belonged, in

¹ Thing Vellir is the nominative plural, Thing Valla—the form in which the word has become more familiar to Englishmen, and which remains in Thingwall (near Liverpool), Tynwald (in the Isle of Man), and Dingwall (in Rosshire)—is the genitive plural.

the south-west of the island, about eight hours' riding from where Reykjavík the present capital now stands, and within the district of the first temple that had been founded by Ingolf, the earliest Norwegian settler. This circumstance gave the place a sort of sacredness. There was plenty of water and pasture, and the lake which washed the plain of meeting abounded (as it does to this day) with trout and wild fowl. (It abounds also with most pernicious small black flies, whereon the trout grow fat, but which make fishing not always a pleasure.) Here, accordingly, Úlfjót having in the meantime returned from Norway with his materials for legislation, the first Alþing, or General Assembly of all Iceland, met in A. D. 930, and here it continued to meet, year after year, for a fortnight in the latter half of June, till the year 1800¹, one of the oldest national assemblies in the civilized world, and one of the very few which did not, like the English Parliament and the Diet of the Romano-Germanic Empire, grow up imperceptibly and, so to speak, naturally, from small beginnings, but was formally and of set purpose established, by what would have been called, had paper existed, a paper constitution, that is to say by the deliberate agreement of independent groups of men, seeking to attain the common ends of order and justice.

There was thus created, before the middle of the tenth century, when Athelstan the Victorious² was reigning in England and defeating Scots and Northumbrians at Brunanburh by the help of the Icelandic warriors Thorolf and Egil, sons of Skallagrim³, when the Saxon king Henry the Fowler was repelling the Magyar hosts and laying the foundations of the German Kingdom, and

¹ Since this lecture was delivered the Alþing which since 1843 had led a feeble life at Reykjavík as a sort of advisory council, has been re-established as a representative governing assembly under a new constitution granted to Iceland in 1874. It now meets every second year at Reykjavík.

² The Saga of Egil calls him Aðalsteinn hinn Sigrsæli (*lit.* 'blessed with victory'). It is curious that this title should have been preserved in Iceland and apparently have been forgotten in England.

³ See *Egils Saga Skallagrimssonar*, chap. 54.

when the power of the last Carolingians was beginning to pale in Gaul before the rising star of the Capetian line, a sort of republic embracing the whole isle of Iceland, a republic remarkable not only from its peculiar political structure, but also, as will presently appear, from the extremely limited range of its governmental activity. About thirty years later its constitution was amended in some important points, and forty years after that time, about the year 1004, further alterations were made, the details of which are too much disputed as well as too intricate to be explained here. Its general outline, in its completed shape, was the following. The total number of regular þings, and priest-chieftaincies or Goðorðs, was fixed at thirty-nine, nine for each of the four Quarters into which the island was divided, except the North Quarter, which, in order to allay certain local susceptibilities, was allowed twelve. Each of these thirty-nine local þings was presided over by its Goði. Then, for certain purposes, three of these þings were united to form a larger þing-district (þingsokn), of which there were therefore thirteen in all, viz. four for the North Quarter, and three for each of the other Quarters. There was also one still larger þing for each Quarter, called the Fjórðungsþing. It seems to have grown up before the institution of the Alþing, and to have represented the first stage in the organization of a larger community out of the small local þings. But it tended in course of time to lose its importance.

Ordinary lawsuits and questions of local interest were determined in these minor þings, while graver suits, or those in which the parties belonged to different þings, or where it was sought to reverse the decision of a local þing, as well as all proposals for alterations of the general law, were brought before the Alþing, at its annual meeting in June. It seems to have been therefore partly a court of first instance and partly a court of appeal. Now the Alþing was open, like other primary Teutonic and Hellenic assemblies, to all freemen who

chose to attend; but its powers were practically exercised by a limited number of persons, viz. the Goðis and certain members nominated by them.

For judicial purposes, the Alþing acted through four Courts, one for each Quarter. Each Quarter Court (*fjorðungsdómr*) consisted, according to one view, of thirty-six members, viz. the Goðis of the Quarter with twenty-four nominees, and, according to another view, of nine persons nominated by the Goðis of the Quarter. There was also a fifth Court (called the *fimtardómr*), instituted later than the others (A. D. 1004), on the suggestion of the famous jurist Njál, son of Thorgeir. This Court, which exercised jurisdiction in cases where one of the other Courts had failed, was composed in a somewhat different way, acted under a more stringent oath, and gave its decisions by a majority, whereas in other Courts unanimity was required. It seems to have been intended not only to avert armed strife by providing a better method for settling disputes, but also to organize the country as a whole and give it something approaching to a central authority. This result, however, was not attained, the social and physical obstacles proving insuperable.

In these judicial committees of the Alþing lawsuits were brought and argued with an elaborate formality and a minute adherence to technical rules far more strict than is now practised anywhere in Europe, a fact which will appear the more extraordinary when we remember that in those days both the law and all the appropriate forms of words which the parties were obliged to employ were not written, but preserved solely by the memory of individual men.

For legislative purposes the Alþing acted through another committee of 144 persons, only one-third (forty-eight) of whom, being the thirty-nine Goðis and nine nominees, had the right of voting. The nine nominees were persons chosen by the Goðis of the East, South, and West Quarters, three by each Quarter, in order to give

each of these Quarters the same strength in the Committee as the North Quarter had with its twelve Goðis. Each of the forty-eight appointed two assessors who advised him, sitting one behind him and the other in front of him, so that he could readily seek their counsel, and thus the 144 were made up, the forty-eight being described as the Middle Bench. This Committee was called the Lögrétta (*lit.* ' Law Amending '), and by it all changes in the law were made, and all matters of common interest discussed. It was essentially an aristocratic body, as indeed the whole Constitution bore an aristocratic colour, though there was no such thing as a formal distinction of rank¹, much less any titled nobility. After the introduction of Christianity in A. D. 1000, the two bishops were added to the Lögrétta, while at the head of all, making up the number of members to 147, stood an elected officer, called the Speaker of the Law.

This last-named personage, the solitary official of the republic, is one of the most curious parts of the system. He was called the Lögsögumaðr, literally ' Law-sayman,' or, as we may render it, Speaker, or Declarer, of the Law, and was the depository and organ of the unwritten common law of the country. It was his duty to recite aloud, in the hearing of the greater number of those present at the Þing, the whole law of Iceland, going through it in the three years during which he held office; and to recite once in every year the formulas of actions, this being the part of the law which was of most practical importance. Besides this, he presided in the Lögrétta, giving a casting vote where the votes were equal; and he was bound to answer every one who asked him what the provisions of the law actually were, although not required to advise applicants as to the course they ought to follow in a given case. When in any suit a question of what was the legal rule arose, reference was made to him, and his decision was accepted as final.

¹ Although the penalty for killing a man of high lineage was heavier than that for an ordinary freeman; and one perceives from the Sagas how carefully genealogies were preserved and what great respect was paid to long descent.

For these labours he received a yearly salary of two hundred ells of Vaðmál (the blue woolen cloth which then served as currency, and which continued to do so, for some purposes, down to our own time), besides one-half of the fines imposed at the Alþing. He was of course selected from the most accomplished lawyers of the time. His declarations of the law were conclusive, at least during his three years' term of office, in all causes and over all persons. Thus he exercised a kind of quasi-judicial or quasi-legislative power, and has been fancifully compared to the Roman Praetor, also an officer elected for a term, also by his edicts the declarer of the law he had to administer¹. But the Law-Speaker was in reality neither judge nor magistrate, nor, indeed, a legislator, except in so far as the right to enounce and interpret borders on legislation. He delivered no judgements, he had no power of enforcing a decision or of punishing an offender. He did not even open the Alþing and take the responsibility for keeping order at it, for these functions belonged to the Goði of the district, called, because the Alþing met within his jurisdiction, the Allsherjargoði (priest of the whole host). The Lögsögumaðr was in fact nothing but the living voice of the law, enunciating those customary rules which had come down from the foretime, rules which all accepted, though they were not preserved in any written form, and though they must have been practically unknown to the great majority of the citizens.

The office, although more important in Iceland from the absence of a king or local prince, was one of which we find traces among other Scandinavian peoples, or at least among the Norsemen. It appears in Norway, in the Orkneys, and in the Hebrides (though there the name is Lögman, which in Iceland means merely one learned in the law).

Thingvellir, where the Alþing met from the year 930

¹ *Viva vox iuris civilis* was the description which the Romans used to give of their Praetor, as to whom see Essay XIV, p. 691.

down to a time within the memory of living men, is a spot not less remarkable physically than memorable for the stirring events of which it was the witness. It is a slightly undulating plain, some five miles long by three wide, washed on the south by a broad island-studded lake, and girdled in at its northern end by lofty mountains, their black volcanic rocks streaked here and there with snow-beds. The surface is all of lava, sometimes bare and rugged, sometimes covered with thin brushwood, dwarf birches and willows, sometimes smoothing itself out into sweeps of emerald pasture, but everywhere intersected by profound chasms, formed when the whole was a molten mass. East and west it is hemmed in by two lines of precipices, whose rugged sides seem to show that the plain between them has, at some remote period, perhaps when the lava-flood was cooling, sunk suddenly down, leaving these walls to be the edges of the plateau which stretches away backwards to the east and west. Under the western of these two walls, on the margin of the lake, just where it receives the stream which has flung itself in a sparkling cascade over the precipice, the place of meeting was fixed. The chieftains, who came from every corner of the island with a following of armed companions and dependents, because broils were frequent, and armed strife might interrupt the progress of a lawsuit, built their booths—erectations of stone and turf roofed for the time with cloth or canvas—along the banks of the Öxará river, and turned out their horses to pasture by the lake. Places were appointed for the holding of the several courts, while the Lögrétta or legislative committee sat on a spot which nature seemed to have herself designed for the purpose. Two of the extraordinary chasms by which the plain is seamed, each some eighty feet deep, and filled for the lower fifty feet by bright green water, enclose a narrow strip of lava some two hundred yards long, cutting it off, except at one point where there is a narrow entrance which three men might hold, from the surrounding land. The surface is nearly

level, covered by short grass now browsed by a few sheep; and there is nothing to tell that in this space, in the full sight of the assembled multitude, the heroes of ancient Iceland spoke and voted their laws, and gave their verdicts; while from an eminence in the midst of the enclosure, still called the Lögberg, or Hill of Laws, the Law-Speaker recited the law of the nation in the sight and hearing of the multitude that stood on the further side of the chasms¹. Not only so: there is all round nothing whatever to show that the place has ever been different from what it is now. Between the Lögberg and the lake stand the little wooden church and its humble parsonage. No other house is near, nor any sign of human life. Only the islet is still pointed out in the river where the solemn duels which the laws of Iceland recognized were fought, and the deep green swirling pool into which women condemned for witchcraft were hurled from the brink of the precipice. In most of the spots to which the traveller is drawn, by memories of constitutional freedom or of political struggles, his imagination is aided by the remains of the buildings where assemblies met or monarchs sat enthroned. Here man has left nothing to speak of his presence, and it is hard to realize, when one looks on this silent and desolate scene, that it was once filled by so much strenuous life, and so often resounded to the clash of arms.

For the Alþing was not merely an assembly for the dispatch of business: it was the great annual gathering of the whole nation, a gathering all the more needed in a land where there are no towns, and most men live miles away from their nearest neighbours. To it chieftains rode with their wives and daughters and a band of armed retainers from the furthest corners of the country, taking, perhaps, as those must have done who came from the

¹ Since this was written, some eminent antiquaries, including my lamented friend Dr. Guðbrand Vigfússon, have argued that the true Lögberg is to be sought not in this spot which tradition indicates, but on the edge of the great lava rift called the Almagnagjá to the west of the river. See *The Saga Steads of Iceland*, by W. G. Collingwood and Jón Stefánsson, 1899, pp. 14-17.

East fjords along the northern edge of the great central desert, a fortnight or more on the way. Shipmasters from Norway or Ireland brought their wares for sale. Artisans plied their trades. We are told that even jugglers' sheds and drinking-booths were set up, and games of all kinds carried on. It was a great opportunity not only for the renewing of friendships between those who lived in distant parts of the country, but for the arranging of adoptions and marriages; and the Sagas mention numerous instances in which proposals were made or betrothals entered into at a meeting of the *Alþing*, in most of which instances the will of the maiden seems to have prevailed over that of her parents. It was midsummer, when there is in those latitudes no night, but the glare of day subsides for a few hours into an exquisitely rich and tender twilight, clothing the sky with colours never seen in our duller air. And we can fancy how those who followed their fathers to the *Alþing* found compensation for all the loneliness and gloom of the long winter in this one fortnight of vivid mirth and excitement.

The meeting of the *Alþing* was not only the centre of the political life of the Republic. It was, so to speak, the Republic itself, for it was only then that the Republic became visible before men's eyes or acted as a collective whole. During the rest of the year lawsuits and everything else of public concern were left to the *Quarter Þings* and local *Þings*, and to the local *Goðis*. The few laws or resolutions of general concern which the *Alþing* passed—they were few, because its legislative activity was chiefly occupied in regulating its own judicial proceedings—were probably meant to be accepted and observed over the whole island, but the *Alþing* did not attempt to enforce them, and indeed had no machinery by which it could do so. Each *Goði* was, in a loose way, a sort of executive magistrate over his own *Þingmen*; but he did not derive his authority from the Central or Federal *Alþing*, and he was not responsible to the *Alþing* for its exercise. The Republic, if we may so call it, had no

Executive whatever. Its sole official was the Law-Speaker (of whom more anon), but his function was only to declare the law, and was exercised only while the Alþing was sitting. At other times the constituent Þings and Goðis were virtually quite independent, and might and often did carry on war with one another, subject to no penalty or liability for so doing, save in so far as an action for compensation might be brought against any one who had killed another. There was no police, no militia, no fleet, no army, nor any means, like those provided in the feudal kingdoms of contemporary Europe, of raising an army. The isle lay so far away from all other countries except Greenland, on which an Icelandic colony had been planted, that it happily did not need to have a foreign policy. There was neither public revenue nor public expenditure, neither exchequer nor budget. No taxes were levied by the Republic, as indeed no expenses were incurred on its behalf.

The Icelandic Republic was in fact a government developed only upon its judicial and (to a much smaller extent) upon its legislative side, omitting altogether the executive and international sides, which were in the Greek and Roman world, and have again in the modern world, become so important. For a community to exist with such an absence of administrative organization was obviously possible only in a region like Iceland, severed by a wide and stormy sea from the rest of the world, and with a very thin and scattered population; possible too only in a simple state of society where man's needs are few and every one fends for himself.

The system whose outlines I have sought to draw is full of interest and suggestion, as well to the student of legal theory as to the constitutional historian. Some modern theorists derive law from the State, and cannot think of law as existing without a State. A few among them have in England gone so far as to deny that Customary Law is law at all, and to define all Law as a Command issued by the State power. But here in Iceland we

find Law, and indeed (as will appear presently) a complex and highly developed legal system, existing without the institutions which make a State; for a community such as has been described, though for convenience it may perhaps be called a Republic, is clearly not a State in the usual sense of the word. Of Iceland, indeed, one may say that so far from the State creating the Law, the Law created the State—that is to say, such State organization as existed came into being for the sake of deciding lawsuits. There it ended. When the decision had been given, the action of the Republic stopped. To carry it out was left to a successful plaintiff; and the only effect a decision had, so far as the Courts were concerned, was to expose the person resisting it to the penalties of outlawry—that is to say, any one might slay him, like Cain, without incurring in respect of his death any liability on the footing of which his relatives could sue the slayer. Law in fact existed without any public responsibility for enforcing it, the sanction, on which modern jurists so often dwell as being vital to the conception of law, being found partly in public opinion, partly in the greater insecurity which attached to the life of the person who disregarded a judgement. Yet law was by no means ineffective. Doubtless it was often defied, and sometimes successfully defied. That happened everywhere in the earlier Middle Ages, and happens to-day in semi-civilized peoples. But the facts that the Alþing maintained so active a judicial life, that the field of law was cultivated so assiduously, and the details of procedure worked out with so much pains and art, that lawsuits were contested so keenly and skilfully—all these facts seem to prove that law must have in the main had its course and prevailed, for it is hard to suppose that all this time and pains would have been during two centuries or more devoted to a pursuit which had no practical result. The contemporary kingdoms and principalities of the earlier Middle Ages lived by the vigour of the executive. There was in them very little of a State administra-

tion, and the law was in most or all of them older than the State—that is to say, it had existed in the form of customs recognized and obeyed before efficient means were provided for enforcing it. So far they resembled Iceland; and the same may be said of the city republics of Italy and Germany. But Iceland is unique as the example of a community which had a great deal of law and no central Executive, a great many Courts and no authority to carry out their judgements.

The process by which the law of Iceland grew, though less exceptional than was its political constitution, illustrates very happily the origin of Customary Law and the first beginnings of legislation. Law springs out of usage. The gathering of the neighbours develops into the *Þing* or local assembly of Norway and the Folk Mot of early England. It treats of all matters of common concern; and as it is the body before whom complaints of wrong are laid, it adopts by degrees regular set forms of words for the statements of a grievance, and for the replies to those statements. The usages become recognized customs, prescribing the cases in which redress may be claimed and the defences by which the claims may be repelled. The forms of words grow more elaborate and come to be considered so essential that a variation from them vitiates the claim. The body of rules thus formed becomes so large that only a few men, devoting themselves to the subject, are able to carry the whole in their memory. These men, proud of their knowledge, elaborate the rules, and particularly the set forms of words, still further, and in their enjoyment of technicalities attach more and more importance to formal accuracy. Thus Custom, which was loose and vague while held in solution in the minds of the mass, becomes crystallized into precision by the labour of the few whose special knowledge gives them a sort of pre-eminence, and even a measure of power. Then it is found that there are diversities of opinion among the experts in the law, or instances arise which show that some custom

generally accepted is inconvenient. By this time Custom has acquired so much authority that the assembly, which has been also, and perhaps primarily, a law court, does not venture to transgress it, the men of legal learning being of course specially opposed to such a course. It therefore becomes necessary formally to change the Custom by a resolution of the body which is at once the Assembly and the Court. As this body consists of those who use, and whose progenitors have created, the custom, and as it continues to settle other matters of common concern affecting the district, it is the proper and only body to make the change. This, then, is legislation in its early stage. The law produced, which we may call Statute Law, is for many generations extremely small in proportion to the mass of law which rests upon Custom only. But the Statute Law is important because it is explicit, because it is sure to be remembered, because it deals with points comparatively large, since it would not be worth while to submit small ones to the assembly. Nevertheless legislation is among all peoples the smallest part of the work of primitive assemblies, be they *Þings* or Folk Mots or Agorai or Comitia. And the growth of the law of Iceland by custom, preserved and elaborated by a succession of law-sages, occasionally (though rarely) altered or added to by the vote of the Alþing, presents a lively picture of what must have been the similar process of the construction of early Roman law by the jurists (*prudentes*) and assembly (*comitia*).

Iceland, however, provided a means for the ascertainment and publicity of her law which Rome lacked. The Lögsögumaðr is an elegant (using the word in its strict Roman sense) complement to a system of Customary Law. His function was well designed to meet and cure the two chief defects in such a system, the uncertainty which existed as to what the rules accepted as law were and the difficulty which an individual desiring to take or defend legal proceedings found in discovering what the rule applicable to his case really was. The solemn reci-

tation of the whole law fixed it in the recollections of those who busied themselves with such matters, and gave everybody an opportunity of knowing what it covered. The right to interrogate the living depositary of the law as to any special point whereanent the querist desired to be informed was a great boon to private persons, who, since they might often have to suffer from the extreme technicality of procedure, needed all the more to be warned beforehand where the pitfalls lay. In these respects the Icelandic system contrasts favourably with those of early Rome and early England. Till the Twelve Tables were enacted the private citizen of Rome had no means of ascertaining the law except by asking some sage, who need not answer unless he pleased, and whose view had no authority beyond that which his personal reputation implied. Even after the Twelve Tables had reduced much of the ancient Customary Law to shape, and made it accessible to the citizens at large, many of the forms of procedure, and the rules as to the days on which legal proceedings could be taken, were kept concealed by the patrician men of law till divulged (at the end of the fourth century B.C.) by Cn. Flavius. In England there was indeed no similar effort to keep legal knowledge within the hands of a few. But the customs were numerous, and many of them were uncertain. There was no way of ascertaining them except by the judgement of a Court, a tedious and expensive process, which after all decided only the particular point that arose in the case that occasioned the judgement. That means of determining a custom to be valid and binding which the Icelanders had already secured through their official in the last half of the tenth century did not begin to be created by the action of the English Courts till the end of the twelfth, and centuries were needed to complete the process.

One of the things that most awakens our surprise in the Icelandic Constitution is its extreme complexity. In one sense simple and even rude, since it omits so much

we should have expected to find in a constitution, it is in another sense intricate, and puzzles us by the artificial character of the arrangements made for the composition of the various courts and of the legislative body, while the multiplicity of þings, and the distribution of powers among them, has given rise to many controversies among historians, some still unsettled. This phenomenon, however, finds a parallel in some of the constitutions of the Greek republics, not to speak of the elaborate systems of such cities as Florence and Venice in the fourteenth century. In Iceland the strong sense of independence which distinguished the Norsemen, and the jealousy the chiefs had of one another, made it necessary to devise means for securing equality and for preventing the influence of any group or district from attaining predominance. Herein the spirit of the Icelandic Constitution is singularly unlike that of the Roman. There, the intense realization of the unity of the city and the need for giving its government the maximum of concentration against neighbouring enemies caused vast powers to be entrusted first to the King and then to the Consuls or to a dictator. In Iceland, where no such need of defence existed, where there was no foreign enemy, and men lived scattered in tiny groups round the edges of a vast interior desert, no executive powers were given to anybody, and elaborate precautions were taken to secure the rights of the smaller communities which composed the Republic and of the priest-chieftains who represented them.

A like intricate character recurs in the system of legal procedure, but the cause is different and not peculiar to Iceland. The excessive technicality of Icelandic process, and the stress laid upon exact compliance with its rules, belong to that stage of the human mind in which form and matter have not yet been separated, and in which the respect for usage and tradition outweighs the sense of substantial justice. Simplicity in legal matters, instead of characterizing the state of nature, is the latest

legal achievement of a civilized age. In accounting for the strictness of adherence to the letter, we must allow something for the dread, natural enough in such an age, that if deviations from the letter of the law were overlooked, if what we should call a power of amendment on matters of form were entrusted to the Court, such discretion would be abused and confidence in the Courts destroyed. But the reason is chiefly to be found, as in the parallel case of those older forms of Roman procedure which continued terribly technical till the time of Cicero, and as in the case of our own older law, to the conservative spirit of the lawyers, attached to the forms they had received and studied, and taking a professional pride in working out their methods, a pride all the greater the more technical those methods were, because the more intricate the technicalities the higher the importance of the few who had mastered them. Substantial justice is all the layman cares for. With the lawyer it is otherwise. An eminent English judge used to remark that of the questions argued before him, counsel showed most interest in points of practice, costs came next, while the merits of the case were last. The late Baron Parke (Lord Wensleydale) was a type of the kind of mind which flourished in Iceland in the eleventh century; and it was a type useful in its way, a type which ought always to be represented in the legal profession, for reverence for tradition and an acute interest in the exactitude of form are hardly less necessary than a philosophic spirit and a zeal for progress.

How keen was the taste for legal subtleties and intricacies is shown, not only by the existence of schools of law in Iceland—young men gathering round sages like Njál or Skapti Thoroddsson, just as the well-born youth of Rome frequented the house of Tib. Coruncanius or Q. Mucius Scaevola—but also by the evident enjoyment which the authors of the Sagas show, and which their public must evidently have taken, in the steps in a lawsuit, or in the telling of some incident which

raises a nice point of procedure. In no other literature is fiction or history, by whichever name we describe the Sagas, so permeated by legal lore.

Our knowledge of the substance of early Icelandic law is derived partly from references or allusions in the Sagas, partly from some ancient law-books, the oldest of which belongs to the period of the Republic, and was compiled, probably about the middle of the twelfth century, out of materials some of them much older, and reaching back into the eleventh and even the tenth. Statutes had been passed during the course of the tenth century, and the *Úlfjótslög* of A.D. 930 is spoken of as a body of law prepared by *Úlfjót* after his journey to Norway and accepted by the *Alþing*, though it was probably a redaction of existing Norse customs, and does not seem to have been reduced to writing, as indeed it is improbable that any laws were written before the beginning of the twelfth century. The next effort at what has been called a codification of the law was made nearly two centuries after *Úlfjót* (about A.D. 1117), when a small commission was appointed which examined the customs, rejected some, approved or amended others, and created what is described as a sort of systematic collection. This is usually known as the *Hafliðaskrá*, from a prominent *Goði* and lawyer *Hafliði Mársson*, who was a member of the commission. This law is stated to have been accepted by the *Alþing*, and was no doubt preserved in writing, as the name *Skrá* (scroll) conveys.

The later book which used to be described as a Code survives in two MSS., differing a good deal from one another, and is commonly known as *Grágás* ('Grey-Goose')¹. It is, however, really not a Code at all, and not even a single law-book, but a mass of matter of different dates and origins never reduced to any sort of

¹ The name *Grágás* (probably drawn from the binding in which a copy of it was preserved) seems to have originally belonged to a MS. of the *Frostaþingslög*, the law which prevailed round *Throndhjem* in Norway, and to have been applied by mistake in the seventeenth century to this Icelandic collection of customs, first published by the *Arnarnaganae* foundation in 1829.

unity. There are ordinances of the *Alþing*, decisions and declarations delivered by Law-Speakers, ecclesiastical regulations, formulas of legal procedure or legal transactions, memoranda of customs which seemed to those who recorded them to have obtained recognition and validity. It is full of instruction as a picture of primitive Teutonic institutions and life; and it throws a good deal of light both on the law of early England—English and Anglo-Norman—and upon some of the most curious features of early Roman law. Sometimes the references to the deliverances of a Law-Speaker as originating a rule make us think of the Roman Praetor, sometimes the concisely phrased records of what was settled by the *Lögrétta* remind us of our English reports of the judgements of the King's Courts in their early forms; while in one point the collection as a whole has a character which belongs to the earlier law-books as well of Rome as of England. Though the statutes of the *Alþing* are the most distinctly authoritative rules it contains, much whose authority would seem doubtful to a modern is set down in a way which clearly implies that it did possess authority. The line between absolutely binding law and all other law is not sharply drawn; indeed no such line exists. That which is recorded may be only a single instance of the observance of an alleged custom. It may be only the expression of the individual opinion of some learned *lögmaðr* (Lawman=jurist). Nevertheless it is a record which has come down from the past, and by which therefore the men of the present may seek to be guided.

In the law of Iceland, as it is presented in this ancient collection, we have, as in the Constitution of the island and the system of the Courts, a striking contrast between the rudeness of an extremely archaic society, in which private war is constantly going on, piracy is an honourable occupation, slavery exists, and there is no State administration and very little use of writing, and the refined intricacy of a system of law which makes

elaborate provision for the definition of legal rights and their investigation and determination by legal process. The time of day is fixed by guessing at the height of the sun above the horizon. The wife is purchased. A father may deliver his child into slavery, no doubt (as in early Rome), a qualified slavery, for the payment of his debts, and the insolvent debtor may be made a slave. But, on the other hand, there are rules, not unlike those of our modern Courts of Equity, regulating the guardianship of the property of a minor, and permitting a portion of it to be applied to the support of his indigent father, brother or sister¹. There are careful distinctions as to who may sue for the penalty for homicide. If the slain man is an Icelander, the action goes first to the son, then to the nearest blood relation, then to the local Goði, then to any member of the same Quarter, then to any citizen (a sort of *actio popularis*). If the slain man was not an Icelander, but one who used the 'Danish (or northern) tongue,' *i.e.* if he was either a Norseman or a Dane or a Swede, then any relative may sue; if a stranger of any other nationality, only a father, son or brother may sue. But for the protection of persons coming in a ship, the comrade or partner² of the deceased, whom failing, the skipper who has the largest share in the ship, is a proper plaintiff.

It is curious to note that, although homicide and murder were common, the punishment of death is never prescribed, even as in two or three of the Southern States of America the death penalty is seldom inflicted, while 'shootings at sight' and lynchings abound. And an interesting resemblance to early Roman law may be found in the extreme severity of the law of slander and libel. The truth of a defamatory statement is no defence. To affix a nickname to a man is punishable by banish-

¹ This rule is ascribed to Guðmund Thorgeirsson, who was Law-Speaker from 1123 to 1135 A. D.

² Partner is félagi (English 'fellow'). Many further rules on this point are contained in the passage, Grágás, chap. xxxvii (vol. ii. pp. 71-73 of the Arnæmagnæan edition).

ment. No verses are to be made on a man, even in his praise, without his leave first obtained; and one who teaches or repeats the verses made by another incurs an equal penalty, the remedy extending even to verses made against the memory of the dead. A love poem addressed to a woman is actionable, the action being brought by her guardian if she is under twenty years of age¹.

Of the ramifications of the system of procedure into all sorts of Courts, besides the regular þings, I have no space to speak; but one singular illustration of the faith which the Icelanders had in the efficacy of legal remedies deserves to be given, because in it these remedies reach beyond the present life. It comes from the *Eyrbyggja Saga*, one of the most striking of the old tales.

A chief named Thorodd, living at Fró á in Breiðifjörð, on the west side of Iceland, had just before Yule-tide been wrecked and drowned with his boat-companions in the fjord. The boat was washed ashore, but the bodies were not recovered. Thereupon his wife Thurið and his eldest son Kjartan bade the neighbours to the funeral feast; but on the first night of the feast, as soon as the fire was lighted in the hall, Thorodd and his companions entered, dripping wet, and took their seats round it. The guests welcomed them: it was held that those would fare well with Rán (the goddess of the deep sea) who attended their own funeral banquet. The ghosts, however, refused to acknowledge any greetings, and remained seated in silence till the fire had burnt out, when they rose and left. Next night they returned at the same time and behaved in the same way, and did so, not only every night while the feast lasted, but even afterwards. The servants at last refused to enter the fire-hall, and no cooking could be done, for when a fire was lit in another room, Thorodd and his companions went there instead. At last Kjartan had a second fire lit in the hall, leaving the big one to the ghosts, so the cooking could now be

¹ See Grágás, chaps. civ-cviii, pp. 143-156 of vol. ii. in the *Arnarnagnaean* edition.

done. But men died in the house, and Thurið herself fell ill, so Kjartan sought counsel of his uncle Snorri, an eminent lawyer and the leading Goði of Western Iceland. By Snorri's advice Kjartan and seven others with him went to the hall door and formally summoned Thorodd and his companions for trespassing within the house and causing men's deaths. Then they named a Door-Court (Dyradómr) and set forth the suits, following all the regular procedure as at a Þing-Court. Verdicts were delivered, the cases summed up and judgement given; and when the judgement word was given on each ghost, each rose and quitted the hall, and was never seen thereafter.

Ghosts have given much trouble in many countries, but it is only the Icelanders who have dealt with them by an action of ejectment.

Although it is a remarkable evidence of the political genius of the Norsemen that they should have been able to work at all a legal system such as has been described, it need hardly be said that it did not work smoothly. The Icelanders were a people of warriors, little accustomed to restrain their passions, and holding revenge for a sacred duty. The maintenance of order at the Alþing was entrusted to the Goði of the spot, and it was strictly forbidden to wear arms while the meeting lasted. The closing of the Alþing was called Vápnatak (weapon-taking, wapentake), because the arms that had been laid aside were taken when men started to ride home from the þing. But the arms were after all only left in the booth, and more than once it happened that the party which found itself unsuccessful in a lawsuit seized sword and spear and fought out the issue in a bloody battle, from which sprang again new blood-feuds and new lawsuits. It is not very often that the Sagas give us a glimpse of the conduct of business at the Alþing; but one such lawsuit, followed by a combat, which arose when the suit broke down on a technical point, is described with wonderful force and spirit in the famous

Saga of Njál Thorgeirsson, a masterpiece of literature in the freshness and brilliance of its narrative.

We hear occasionally of the passing of particular laws at an Alþing. In A.D. 994, for instance, it was enacted that the suit for compensation for homicide which was brought, according to the general practice of the northern nations, by and for the benefit of the nearest relatives of the slain, a right which has survived in the law of Scotland under the name of Assythment, and has been partially introduced into the law of England by the Act 9 & 10 Vict. c. 93 (commonly called Lord Campbell's Act), should in future not be brought by a woman or by a child under sixteen years of age, but by the nearest male relative. This provision was suggested by a case that had occurred just before, when inadequate compensation had been recovered for the slaughter of a chieftain named Arnkel, owing to the mismanagement of the suit by his widow. Again, in A.D. 1006 we are told of the abolition of the judicial combat on the occasion of an indecisive duel between the poet and Viking Gunnlaug Ormstunga (Snake's tongue¹) and another poet named Hrafn, the details of which are recorded in one of the most beautiful and touching of the early Sagas. Gunnlaug had been betrothed to Helga the Fair, one of the most famous heroines of Icelandic story, but having been detained in England by King Ethelred II, whose guest he had previously been in London² and whose praises he had been celebrating in verse, had failed to return at the appointed time, and found Helga, who had yielded to the importunities of her relatives, already married to Hrafn. According to the custom of the North, which then allowed any man to require another either to give up his wife and all his property or defend her and it by arms, Gunnlaug came to the Alþing and

¹ So called from his satirical powers.

² The Saga says (*Gunnlaugs Saga Ormstungu*, chap. vii) that in the days of Ethelred son of Edgar (Aðalráðr Játgeirsson) the same tongue was spoken in England and Denmark as in Norway, and that this continued in England till William the Bastard won England, after whom Welsh (Valsk = French) was spoken.

formally challenged Hrafn, and they fought, each with his second, a solemn duel on the island in the Öxará which was set apart for that purpose. A dispute arose after the first encounter, and the combatants were separated. Gunnlaug wished to resume the combat, but the law already referred to, prohibiting formal duels in future, was passed next day by the Lögrétta; and he unwillingly obeyed, for a breach of it would have exposed him to the penalties of outlawry. Helga, however, refused to live any longer with her husband Hrafn, and next year the two rivals sailed by agreement to Norway, just as, fifty years ago, persons fearing to fight a duel in England used to cross to Calais for the purpose. Years passed before they met in the wild country east of Thronhjem. There they fought out their quarrel. Gunnlaug smote off his enemy's foot, and then proposed to stop the combat. Hrafn however, supporting himself against a tree, wished to fight on, but as he was tortured by thirst, he besought his opponent to fetch him a draught of water from a brook hard by, promising not to deceive him. The chivalric Gunnlaug brought the water in his helmet, whereupon Hrafn, taking the water with his left hand, suddenly raised his sword and, with all his remaining strength, smote Gunnlaug on his bared head. 'Thou hast done ill and deceived me,' said Gunnlaug, 'seeing that I trusted you.' 'So is that,' answered Hrafn, 'but I grudged thee the love of Helga the Fair.' Then they fought on. Hrafn was slain, and in a few hours Gunnlaug died of his wounds¹. The news was brought to Iceland, and after a time Helga, thinking ever of Gunnlaug, and often spreading out upon her knees a garment which Gunnlaug had given to her, pined away and died likewise.

Another striking scene at the Alþing has been pre-

¹ The Saga adds that very shortly after the combat, and long before the news of it could have reached Iceland, the ghosts both of Gunnlaug and of Hrafn appeared in dreams to their respective fathers in Iceland, and recited poems describing their deaths. Illugi the Black, Gunnlaug's father, remembered the poem he heard and repeated it aloud next day. The Saga gives both poems. This is one of the earliest Teutonic instances of a death-apparition.

served to us in the Saga which relates the introduction of Christianity. King Olaf Tryggvason, the most brilliant of all the Norwegian sovereigns, who, having been himself converted some ten years before, was hard at work converting the stubborn Norwegians by burning their houses and torturing themselves, had sent two missionaries to Iceland, one of whom, the priest Thangbrand, had been obliged to leave Norway on account of his violent life, and who signalized himself in Iceland by committing two murders in the course of his five months' stay, which was then summarily shortened. The unworthiness of the minister, however, does not seem to have injured the cause he championed. Several men of note embraced the new faith, which was of course well known to the Icelanders from their intercourse with Ireland and Britain, and had the promise of the future to recommend it. These men, and also some heathen chieftains who thought that acceptance was the best way of avoiding civil war, supported the envoys of Olaf, when, at the Alþing of the year 1000, they urged upon the assembly to decree the abolition of paganism. A story goes that, while the debate was at its height, a messenger arrived to tell that a volcano had broken out thirty miles to the south, and was pouring a flood of lava over the pastures. The heathen party accepted the news as an omen, and exclaimed, 'This is the wrath of the gods at these new rites; see what you have to expect from their anger!' 'With whom, then,' said Snorri, a leading Goði who had not yet declared himself, 'with whom were the gods angry when this rock was molten on which we stand?' (pointing to the deep lava rifts that lay around the Lögberg). By the interposition of the Law-Speaker Thorgeir, that which he described as a compromise, but which was in reality a surrender by the heathen party, was at the same Alþing accepted. The people were to be baptized and declare themselves Christians, and the temples and images of the old gods were to be destroyed; but those who liked to sacrifice at home

might continue to do so; and two heathen customs, the exposure of new-born infants and the eating of horse-flesh, were to be permitted. Some difficulty arose over the reluctance of those who came from the North and East Quarters of the island to submit to immersion in cold water; but this difficulty was happily overcome by the use of the hot springs at Reykir for the rite.

The century and a half that followed the introduction of Christianity was the most brilliant period in the history of the island. It was not indeed a time of peace, for the old passions and the old superstitions were but little altered. Slayings and burnings of houses with their inmates went on pretty much as before. But there was now added to the stimulus which their free republican life and their piratical expeditions gave to the national spirit the influence of the learning and ideas which came in the train of the new faith. The use of writing soon spread, and the magnificent Sagas, which are among the noblest monuments of Northern genius, were nearly all of them produced in this age, though some were not committed to parchment before the end of the twelfth century.

For many years the Constitution of the Republic seems to have undergone no great alteration. The establishment of Christianity did indeed throw considerable power into the hands of the two bishops, and eventually produced a strife between the Church and the temporal magnates resembling that which distracted both the Romano-Germanic Empire and England. This scarcely affected the position of the Goði, whose authority had now lost so much as it originally possessed of a religious character. Snorri, whose appeal to geology is said to have decided the Alþing against paganism, was himself the priest of the most famous heathen sanctuary of the island. But in the beginning of the thirteenth century the delicately-framed fabric of the Republican Constitution began to break up. The tendency of a federation usually is to become less of a federation and more

of a single united state. But in Iceland the federal bond, if one can use this name, was always weak, and when a powerful member became disobedient, there were no legal means of reducing him to submission. By degrees the number of priest-chieftainships diminished, the *Goðorðs*, which passed not only by inheritance but also by gift or sale, coming to be accumulated in the hands of a few great families, who thus acquired a predominant influence at the *Alþing*, were virtually masters of large districts of the country, and marched about like feudal lords attended by petty armies. Thus the old blood-feuds assumed more and more the aspect of civil wars. Piracy was now less practised, because the countries which had formerly been ravaged were better prepared for defence, so the energy that used to spend itself upon the coasts of Scotland and Ireland, of North Germany and Gaul, was now turned inward, and with fatal results.

I am not writing the history of Iceland, though indeed I wish I were doing so, for the theme is a fascinating one. But before closing these scattered observations, intended to stimulate rather than to satisfy curiosity, I will add three remarks suggested by the sketch that has been given.

The first remark is that Iceland presents one of the few instances in history of a breach in the continuity of institutional development. The settlers were all of Norse stock; and Norway had in its petty communities a rudimentary system of institutions not unlike that described by Tacitus in his account of Germany, or that which the conquering Angles and Saxons brought to Britain. Each community was an independent *Fylki* (folk). In each *Fylki* there was a number of nobles, one of whom stood foremost as hereditary chieftain, and a body of warlike freemen, as well as a certain number of slaves. In each there was a popular assembly, the *Þing*, corresponding to our Saxon Folk Mot. Now owing to the way in which the settlers had planted themselves along the coasts of Iceland, and to the fact that they

were less closely aggregated there than men had been in Norway, this organization did not reappear in the new land. There was indeed everywhere a þing, for the habit of meeting to deal with lawsuits and other matters of common interest was cherished as the very foundation of society. But an Icelandic community was not a Fylki. It was not an old natural growth, but rather a group of families whose tie was at first only that of local proximity and thereafter that also of worship at a common temple. The Goði, though he became the centre of this group, was not a chieftain with a hereditary claim to leadership, and was not necessarily of any higher lineage than some of his þingmen. Such eminent and high-born men as Njál for instance and Egil Skallagrímsson were not Goðis. The Goðorð was really a new institution, due to the special circumstances of Iceland, and apparently without precedent among the Teutonic races. Still more plainly was the organization of the Republic with its scheme of Courts and its Lögrétta a new creation, due to the wisdom and public spirit of the leading men of the nation, and not a purely natural growth.

Secondly, as the Icelandic Republic is a new form of political society, so the Alþing, in which the unity of the Republic found visible expression, is a unique body, which cannot be referred to any one of the familiar types of assembly. It is not a Primary Assembly, for though all freemen are present, only a limited number of persons are entitled to exercise either judicial or legislative functions. Neither is it a Representative Assembly, for no one was elected to sit in it as a delegate from others. The Goðis sat each by his own right, and the other members as nominees of the Goðis. Neither again is it a sort of King's Council, like the Curia Regis of mediaeval England, consisting of magnates and official advisers summoned by a monarch. If parallels to it are to be sought, they are to be sought rather in bodies such as the Roman Senate may have been in its earlier form, a

sort of council of the heads of organized communities; yet the differences between the Roman *gentes* and the Icelandic þingmen, and the absence of an executive magistrate like the Roman king, make the parallel anything but close. Still more remote is the resemblance which the Alþing might be deemed to bear to the council of a league, such as was the Swiss Confederation before 1799, or such as the Diet of the Romano-Germanic Empire in its later days.

The comparison of Iceland to a federation suggests a third question. Why did not the Republic develop into a united State, whether republican or monarchical, as did most of the nations of mediaeval Europe?

Out of several reasons that might be assigned I will mention three only, two of them political, the third physical.

In Iceland there was no single great family with any hereditary claim to stand above the others, while all the leading families were animated by a high sense of pride and a pervading sentiment of equality. This love of equality remains among the sons of the old Norsemen both in Iceland and in Norway, and is indeed stronger there than anywhere else in Europe.

Iceland had not, and could not have, any foreign wars. There was therefore no external strife to consolidate her people, no opportunity for any leader to win glory against an enemy, or to create an army on which to base his power. All the wars were civil wars, and tended to disunion.

The third reason is to be found in the nature of the country. The island, larger than Ireland, has practically no land fit for tillage, and very little fit even for pasture. Neither has it any internal trade. The interior is occupied by snow mountains and glaciers and lava-fields and wastes of black volcanic sand or pebbles. Iceland is really one huge desert with some habitable spots scattered along its coasts. It was the Desert that most of all destroyed the chances of political unity under a re-

public by dividing the people into numerous small groups, far removed from one another, and in many places severed by rugged and barren wastes, or by torrents difficult to cross.

Nevertheless, although the Republic was evidently destined to perish, it is possible that had Iceland been left to herself the rivalry of the two or three great factions which divided it, and were usually in arms against one another, would have ended in the triumph of one of them, and in the establishment of a monarchy, or (less probably) of several independent rival principalities. But a new and more formidable figure now appeared on the scene. The successors of King Harald the Fair-haired had always held that the Icelanders, since their ancestors had come from Norway, ought to own their supremacy¹, and they argued that as monarchical government was divinely appointed, and prevailed everywhere in Continental Europe, no republic had a right to exist. King Hákon Hákonsson (Hákon IV), one of the greatest among the kings of Norway, now found in the distracted state of the island a better opportunity of carrying out the plans which his predecessors Olaf Tryggvason and Olaf the Saint had been obliged, by the watchfulness of the Alþing, to abandon. By bribes and by threats, by drawing the leading Icelanders to his Court, and sending his own emissaries through the island, he succeeded in gaining over the few chiefs who now practically controlled the Alþing, and at the meeting of midsummer, A.D. 1262 (one year before the battle of Largs, which saved Scotland from the invasion of this very Hákon), the Southern, Western and Northern Quarters accepted the King of Norway as their sovereign, while in 1264 (the year of the summoning of the first representative Parliament of England by Earl Simon de Montfort) the remaining districts which had

¹ This claim of a Crown to the allegiance of emigrants who had passed into new lands reminds one of that made by the British Government, down to 1852 and 1854, as respects the Dutch farmers who had gone forth into the wilderness of South Africa in 1836.

not yet recognized the Norwegian Crown, now held by Magnus son of Hákon, made a like submission. Thenceforward Iceland has followed the fortunes first of Norway and then of Denmark. In 1814, when Norway was severed from the Danish and transferred to the Swedish Crown, Iceland ought to have gone with Norway. But nobody at the Congress of Vienna knew or cared about the matter¹: and so Iceland remains attached to Denmark, for which she has little love.

With the free republic the literature which had given it lustre withered up and disappeared. Only one work of high merit, the religious poem called *The Lily*, was produced in the centuries that succeeded down to the Reformation, when the spirit of the people was again stirred, and a succession of eminent writers began which has never failed down to our own day. But in the darkest times, in the ignorance and gloom of the fifteenth century, in the pestilences and famine caused by the terrible volcanic eruptions of the eighteenth, which are said to have destroyed one-fifth of the population, the Icelanders never ceased to cherish and enjoy their ancient Sagas. No farmhouse wanted its tiny store of manuscripts, which were and still are read aloud in the long nights of winter, while the women spin and the men make nets and harness. And it is beyond doubt chiefly owing to the profusion and the literary splendour of these works of a remote antiquity—works produced in an age when England and Germany, Italy and France had nothing better than dull monkish annalists or the reciters of such a tedious ballad epic as the *Song of the Nibelungs*—that the Icelandic language has preserved its ancient strength and purity, and that the Icelandic nation, a handful of people scattered round the edge of a vast and dreary wilderness, has maintained itself, in face of the overwhelming forces of nature, at so high a level of culture, virtue and intelligence.

¹ The preliminaries to the Treaty of Kiel by which Norway was severed from the Danish Crown to be attached to the Swedish refer to Iceland, the Faeroe Isles, and Greenland as having 'never belonged to Norway.'

VI

THE UNITED STATES CONSTITUTION AS SEEN IN THE PAST

THE PREDICTIONS OF HAMILTON AND TOCQUEVILLE

HE who desires to discover what have been the main tendencies ruling and guiding the development of American institutions, will find it profitable to examine what were the views held and predictions delivered, at different epochs in the growth of the Republic, by acute and well-informed observers. There is a sort of dramatic interest in this method of inquiry, and it is calculated to temper our self-confidence in judging the phenomena of to-day. Besides, it helps us to realize, better than we can do merely by following the course of events, what aspect the political landscape wore from time to time. When we read a narrative, we read into the events our knowledge of all that actually flowed from them. When we read what the contemporary observer expected from them as he saw them happening we reach a truer comprehension of the time.

To collect and set forth a representative anthology of political prophecies made at critical epochs in the history of the United States, would be a laborious undertaking, for one would have to search through a large number of writings, some of them fugitive writings, in order to present adequate materials for determining the theories and beliefs prevalent at any given period. I attempt

nothing so ambitious. I desire merely to indicate, by a comparatively simple example, how such a method may be profitably followed, disclaiming any pretensions to dig deep into even the obvious and familiar materials which students of American history possess.

For this purpose, then, I will take two famous books—the one written at the very birth of the Union by those who watched its cradle, and recording incidentally, and therefore all the more faithfully, the impressions and anticipations of the friends and enemies of the infant Constitution; the other a careful study of its provisions and practical working by a singularly fair and penetrating European philosopher. I choose these books not only because both are specially representative and of rare literary merit, but because they are easily accessible to European as well as American readers, who may, by referring to their pages, supply the omissions which want of space will compel me to make, and may thereby obtain a more full and graphic transcript of contemporary opinion. One of these books is *The Federalist*¹—a series of letters recommending the proposed Constitution for adoption to the people of New York, written in 1788 by Alexander Hamilton, afterwards Secretary of the Treasury, James Madison, afterwards President from 1809 to 1817, and John Jay, afterwards Chief Justice from 1789 to 1795. They were all signed *Publius*. The other, which falls not quite halfway between 1788 and our own time, is the *Democracy in America* of Alexis de Tocqueville.

I. THE UNITED STATES AT THE ADOPTION OF THE CONSTITUTION.

I begin by briefly summarizing the record which *The Federalist* preserves for us of the beliefs of the opponents and advocates of the Draft Constitution of 1787 regard-

¹ There are several good editions of *The Federalist*. The latest and one of the best known to me is that edited by Mr. Paul Leicester Ford (New York, 1893).

ing the forces then at work in American politics and the probable future of the nation.

To understand those beliefs, however, we must bear in mind what the people of the United States then were, and for that purpose I will recall the reader's attention to some of the more salient aspects of the Republic at the epoch when its national life began.

In 1783 the last British soldier quitted New York, the last stronghold that was held for King George. In 1787 the present Constitution of the United States was framed by the Convention at Philadelphia, and in 1788 accepted by the requisite number of States (nine). In 1789 George Washington entered on his Presidency, the first Congress met and the machine began to work. It was a memorable year for Europe as well as for America—a year which, even after the lapse of more than a century, we are scarcely yet ripe for judging, so many sorrows as well as blessings, *πολλὰ μὲν ἔσθλα μεμιγμένα, πολλὰ δὲ λυγρά*, were destined to come upon mankind from those elections of the States-General which were proceeding in France while Washington was being installed at Philadelphia.

All of the thirteen United States lay along the Atlantic coast. Their area was 827,844 square miles, their population 3,929,214, little more than half the population of New York State in 1900. Settlers had already begun to cut the woods and build villages beyond the Alleghanies; but when Kentucky was received as a State into the Union in 1792, she had a population of only 80,000. The population was wholly of English (or Anglo-Scottish) stock, save that a few Dutch were left in New York, a few persons of Swedish blood in Delaware, and some isolated German settlements in Pennsylvania. But in spite of this homogeneity the cohesion of the States was weak. Communication was slow, difficult and costly. The jealousies and suspicions which had almost proved fatal to Washington's efforts during the War of Independence were still rife. There was some real conflict,

and a far greater imagined conflict, of interests between the trading and the purely agricultural States, even more than between the slave States and those in which slavery had practically died out. Many competent observers doubted whether the new Federal Union, accepted only because the Confederation had proved a failure and the attitude of foreign powers was threatening, could maintain itself in the face of the strong sentiment of local independence animating the several colonies, each of which, after throwing off the yoke of Britain, was little inclined to brook any control but that of its own legislature. The new Constitution was an experiment, or rather a bundle of experiments, whose working there were few data for predicting. It was a compromise, and its own authors feared for it the common fate of compromises—to satisfy neither party and to leave open rents which time would widen. In particular, it seemed most doubtful whether the two branches of the Legislature, drawn from so wide an area and elected on different plans, would work harmoniously, and whether general obedience would be yielded to an executive President who must necessarily belong to and seem to represent one particular State and section of the country. Parties did not yet exist, for there was as yet hardly a nation; but within a decade they grew to maturity and ferocity. One of them claimed to defend local self-government, the rights of the people, democratic equality; the other, the principle of national unity and the authority of the Federal power. One sympathized with France, the other was accused of leaning to an English alliance. They were, or soon came to be, divided not merely on burning questions of foreign policy and home policy, but also—and this was an issue which mixed itself up with everything else—as to the extent of the powers to be allowed to the central Government and its relations to the States—questions which the curt though apparently clear language of the Constitution had by no means exhausted.

Slavery was not yet a burning question—indeed it existed to some slight extent in the Middle as well as in the Southern States, but the opposition of North and South was already visible. The Puritanism of New England, its industries and its maritime commerce, gave it different sentiments as well as different interests from those which dominated the inhabitants of the South, a population wholly agricultural, among whom the influence of Jefferson was strong, and theories of extreme democracy had made progress.

There was great diversity of opinion and feeling on all political questions in the America of those days, and the utmost freedom in expressing it. Over against the extreme democrats stood an illustrious group whose leader was currently believed to be a monarchist at heart, and who never concealed his contempt for the ignorance and folly of the crowd. Among these men, and to a less extent among the Jeffersonians also, there existed no small culture and literary power, and though the masses were all orthodox Christians and, except in Maryland, orthodox Protestants, there was no lack of scepticism in the highest circles. One may speak of highest circles, for social equality, though rapidly advancing and gladly welcomed, was as yet rather a doctrine than a fact: and the respect for every kind of authority was great. There were neither large fortunes nor abject poverty: but the labouring class, then far less organized than it is now, deferred to the middle class, and the middle class to its intellectual chiefs. The clergy were powerful in New England: the great colonial families enjoyed high consideration in New York, in Pennsylvania, and above all in Virginia, whose landowners seemed to reproduce the later semi-feudal society of England. Although all the States were republics of a hue already democratic, every State constitution required a property qualification for the holding of office or a seat in the Legislature, and, in most States, a similar condition was imposed even on the exercise of the

suffrage. Literary men (other than journalists) were rare, the universities few and old-fashioned in their methods, science scarcely pursued, philosophy absorbed in theology and theology dryly dogmatic. But public life was adorned by many striking figures. Five men at least of that generation, Washington, Franklin, Hamilton, Jefferson and Marshall, belong to the history of the world; and a second rank which included John Adams, Madison, Jay, Patrick Henry, Gouverneur Morris, Roger Sherman, James Wilson, Albert Gallatin, and several other gifted figures less familiar to Europe, must be mentioned with respect.

Everybody professed the principles of the Declaration of Independence, and therefore held a republican form of government to be the only proper, or at any rate the only possible form for the central authority as well as for the States. But of the actual working of republican governments there was very little experience, and of the working of democracies, in our present sense of the word, there was really none at all beyond that of the several States since 1776, when they broke loose from the British Crown. Englishmen are more likely than other Europeans to forget that in 1788 there was in the Old World only one free and no democratic nation¹. In Europe there now remain but two strong monarchies, those of Russia and Prussia, while the Western hemisphere, scarcely excepting Dutch and British Guiana and Canada, is entirely (at least in name) republican. But the world of 1788 was a world full of monarchs—despotic monarchs—a world which had to go back for its notions of popular government to the commonwealths of classical antiquity. Hence the speculations of those times about the dangers, and merits, and tendencies characteristic of free governments, were and must needs be vague and fantastic, because the materials for a sound induction were wanting. Wise men,

¹ The Swiss Confederation was hardly yet a nation, and few of the cantons were governed democratically.

when forced to speculate, recurred to the general principles of human nature. Ordinary men went off into the air and talked at large, painting a sovereign people as reckless, violent, capricious on the one hand, or virtuous and pacific on the other, according to their own predilections, whether selfish or emotional, for authority or for liberty. Though no one has yet written the natural history of the masses as rulers, the hundred years since 1788 have given us materials for such a natural history surpassing those which Hamilton possessed almost as much as the materials at the disposal of Darwin exceeded those of Buffon. Hence in examining the views of the *Federalist* writers¹ and their antagonists, we must expect sometimes to find the diagnosis inexact and the prognosis fanciful.

II. PREDICTIONS OF THE OPPONENTS AND ADVOCATES OF THE CONSTITUTION.

Those who opposed the Draft Constitution in 1787, a party both numerous and influential in nearly every State, were the men specially democratic and also specially conservative. They disliked all strengthening of government, and especially the erection of a central authority. They were satisfied with the system of sovereign and practically independent States. Hence they predicted the following as the consequences to be expected from the creation of an effective Federal executive and legislature².

I. The destruction of the States as commonwealths. The central government, it was said, would gradually encroach upon their powers; would use the federal army

¹ Of these writers Hamilton must be deemed the leading spirit, not merely because he wrote by far the larger number of letters, but because his mind was more penetrating and commanding than either Madison's or Jay's. Madison rendered admirable service in the Philadelphia Convention of 1787, but afterwards yielded to the influence of Jefferson, a character with less balance but more force and more intellectual fertility.

² I take no account of those objections to the Constitution which may be deemed to have been removed by the first eleven amendments.

to overcome their resistance; would supplant them in the respect of their citizens; would at last swallow them up. The phrase 'consolidation of the Union,' which had been used by the Convention of 1787 to recommend its draft, was laid hold of as a term of reproach. 'Consolidation,' the absorption of the States by or into one centralized government, became the popular cry, and carried away the unthinking.

2. The creation of a despot in the person of the President. His legal authority would be so large as not only to tempt him, but to enable him, to extend it further, at the expense of the liberties both of States and of people. 'Monarchy,' it was argued, 'thrown off after such efforts, will in substance return with this copy of King George III, whose command of the federal army, power over appointments, and opportunities for intriguing with foreign powers on the one hand and corrupting the legislature on the other¹, will render the new tyrant more dangerous than the old one. Or if he be more open to avarice than to ambition, he will be the tool of foreign sovereigns and the means whereby they will control or enslave America².

3. The Senate will become an oligarchy. Sitting for six years, and not directly elected by the people, it 'must gradually acquire a dangerous pre-eminence in

¹ See *The Federalist*, No. LIV.

² *The Federalist*, No. LXVI, p. 667. 'Calculating upon the aversion of the people to monarchy, the writers against the Constitution have endeavoured to enlist all their jealousies and apprehensions in opposition to the intended President of the United States, not merely as the embryo but as the full-grown progeny of that detested parent. They have to establish the pretended affinity, not scrupled to draw resources even from the regions of fiction. The authority of a magistrate in few instances greater, in some instances less, than those of a Governor of New York, have been magnified into more than royal prerogatives. He has been decorated with attributes superior in dignity and splendour to those of a King of Great Britain. He has been shown to us with the diadem sparkling on his brow and the imperial purple flowing in his train. He has been seated on a throne surrounded with minions and mistresses, giving audience to the envoys of foreign potentates in all the supercilious pomp of majesty. The images of Asiatic despotism and voluptuousness have scarcely been wanting to crown the exaggerated scene. We have been taught to tremble at the terrific visages of murdering janizaries, and to blush at the unveiled mysteries of a future seraglio.'

These were the days when Johnson and Gibbon ruled English style.

the government, and finally transform it into a tyrannical aristocracy¹.

4. The House of Representatives will also, like every other legislature, aim at supremacy. Elected only once in two years, it will forget its duty to the people. It will consist of 'the wealthy and well-born,' and will try to secure the election of such persons only as its members².

5. The larger States will use the greater weight in the government which the Federal constitution gives them to overbear the smaller States.

6. The existence of a strong central government is not only likely, by multiplying the occasions of diplomatic intercourse with foreign powers, to give openings for intrigues by them dangerous to American independence, but likely also to provoke foreign wars, in which the republic will perish if defeated, or if victorious maintain herself only by vast expenditure, with the additional evil of having created in an army a standing menace to freedom.

That some of these anticipations were inconsistent with others of them was no reason why even the same persons should not resort to both in argument. Any one who wishes to add to the number, for I have quoted but a few, being those which turn upon the main outlines of the Philadelphia draft, may do so by referring to the record, known at Elliott's Debates, of the discussions in the several State Conventions which deliberated on the new Constitution. It is an eminently instructive record.

I pass from the opponents of the Constitution to its advocates. Hamilton and its friends sought in it a remedy against what they deemed the characteristic dangers of popular government. It is by dwelling on these dangers that they recommend it. We can perceive, however, that, while lauding its remedial power,

¹ *The Federalist*, No. LXII.

² *The Federalist*, Nos. LVI and LIX.

they are aware how deep-seated such dangers are, and how likely to recur even after the adoption of the Constitution. The language which Hamilton held in private proves that he desired a more centralized government, which would have approached nearer to that British Constitution which he regarded as being, with all its defects (and partly owing to its corruptions!) the best model for free nations¹. He feared anarchy, and thought that only a strong national government could avert it. And in a remarkable letter written in February, 1802, under the influence of disappointment with the course events were then taking, he describes, in his somewhat sweeping way, the Constitution he was 'still labouring to prop' as a 'frail and worthless fabric.'

We may therefore legitimately treat his list of evils to be provided against by the new Federal Government as indicating the permanently mischievous tendencies which he foresaw. Some of them, he is obliged to admit, cannot be wholly averted by any constitutional devices, but only by the watchful intelligence and educated virtue of the people.

The evils chiefly feared are the following:—

1. The spirit and power of faction, which is so clearly the natural and necessary offspring of tendencies always present in mankind, that wherever liberty exists it must be looked for².

Its causes are irremovable; all you can do is to control its effects, and the best prospect of overcoming them is afforded by the representative system and the wide area of the United States with the diversities among its population.

2. Sudden impulses, carrying the people away and inducing hasty and violent measures³.

3. Instability in foreign policy, due to changes in the

¹ Though he, like other observers of that time, had not realized, and might not have relished, the supremacy, now become omnipotence, which the House of Commons had already won.

² *The Federalist*, No. X (written by Madison), and in other letters.

³ *The Federalist*, No. LXII.

executive and in public sentiment, and rendering necessary the participation of a comparatively small council or Senate in the management of this department.

4. Ill-considered legislation. 'Facility and excess of law-making¹,' and 'inconstancy and mutability in the laws²,' form the 'greatest blemish in the character and genius of our governments.'

5. The Legislature is usually the strongest power in free governments. It will seek, as the example of the English Parliament shows, to encroach upon the other departments; and this is especially to be feared from the House of Representatives as holding the power of the purse³.

6. The States, and especially the larger States, may overbear the Federal Government. They have closer and more constant relations with the citizen, because they make and administer the ordinary laws he lives under. His allegiance has hitherto belonged to them, and may not be readily given to the central authority. In a struggle, should a struggle come, State power is likely to prevail against Federal power.

7. There is in republics a danger that the majority may oppress the minority. Already conspicuous in some of the State governments, as for instance in Rhode Island, this danger may be diminished by the application of the federal system to the great area of the Union, where 'society will be broken into so many parts, interests, and classes of citizens, that the rights of individuals or of the minority will be in little danger from interested combinations of the majority⁴.'

8. Another source of trouble is disclosed by the rash

¹ *The Federalist*, No. LXI.

² *The Federalist*, No. LXXII.

³ 'The Legislative Department is everywhere (*i. e.* in all the States) extending the sphere of its activity and drawing all power into its impetuous vortex. . . . It is against the enterprising ambition of this department that the People ought to indulge all their jealousy and exhaust all their precautions' (*The Federalist*, No. XLVII). The people have now begun to resort to precautions; but it is not the ambition of State legislatures that is feared, it is their subserviency to private interests or the party machine.

⁴ *The Federalist*, No. L.

and foolish experiments which some States have tried in passing laws which threaten the validity of contracts and the security of property. There are also signs of weakness in the difficulty which State Governments have found in raising revenue by direct taxation¹. Citizens whose poverty does not excuse their want of public spirit refuse to pay; and the administration fears to coerce them.

Not less instructive than the fears of *The Federalist* writers are their hopes. Some of the perils which have since been disclosed are not divined. Some institutions which have conspicuously failed are relied on as full of promise.

The method of choosing the President is recommended with a confidence the more remarkable because it was the point on which the Convention had been most divided and had been latest in reaching an agreement.

‘ If the manner of the appointment of the Chief Magistrate be not perfect, it is at least excellent. It unites in an eminent degree all the advantages the union of which was to be wished for. . . . The process of election affords a moral certainty that the office of President will never fall to the lot of any one who is not in an eminent degree endowed with the requisite qualifications. Talents for low intrigue, and the little arts of popularity, may alone suffice to elevate a man to the first honours in a single State, but it will require other talents and a different kind of merit to establish him in the confidence and esteem of the whole Union, or of so considerable a portion of it as would be necessary to make him a successful candidate for the distinguished office of President of the United States. It will not be too strong to say that there will be a constant probability of seeing the station filled by characters pre-eminent for ability and virtue².’

¹ *The Federalist*, No. XII.

² *The Federalist*, No. LXVII. In A. D. 1800, twelve years after Hamilton wrote this passage, the contest for the Presidency lay between Jefferson and Aaron Burr, and Hamilton was compelled by his sense of Burr's demerits to

It is assumed that America will continue an agricultural and (to a less extent) a commercial country, but that she will not develop manufactures; and also that the fortunes of her citizens will continue to be small¹. No serious apprehensions regarding the influence of wealth in elections or in politics generally are expressed.

The contingency of a division of the States into two antagonistic groups is not contemplated. When the possibility of State combinations is touched on, it is chiefly with reference to the action of small and of large States respectively. In particular no hint is dropped as to the likelihood of the institution of slavery becoming a bond to unite the Southern States and a cause of quarrel between them and the Northern. Yet slavery had given trouble in the Philadelphia Convention, and an opposition of North and South grounded upon it soon emerged.

Although the mischiefs of faction are dwelt on, nothing indicates that its embodiment in highly developed party systems, whose organizations might overshadow the legal government, had occurred to any one's mind. Still less, of course, is there any anticipation of the influence to be exerted on politics by the distribution of offices. Not till long afterwards were they treated as 'spoils of war.'

urge his party to vote (when the choice came before the House of Representatives) for Jefferson, his own bitter enemy. What he thought of Burr, who, but for his intervention, would certainly have obtained the chief magistracy of the nation (and by whose hand he ultimately died), may be inferred from the fact that he preferred as President the man of whom he thus writes: 'I admit that his (Jefferson's) politics are tinged with fanaticism; that he is too much in earnest in his democracy; that he has been a mischievous enemy to the principal measures of our past administration; that he is crafty and persevering in his objects; that he is not scrupulous about the means of success, nor very mindful of truth; and that he is a contemptible hypocrite. But, &c.' (Letter to James A. Bayard, Jan. 16, 1801.)

After this it is superfluous, as it would be invidious, to dwell on the deficiencies of some recent Presidents or Presidential candidates.

¹ 'The private fortunes of the President and Senators, as they must all be American citizens, cannot possibly be sources of danger' (*The Federalist*, No. LIV).

III. CRITICISM OF THE PREDICTIONS OF 1788.

Let us now see which of these views and forecasts have been verified by the event.

Of those put forth by the opponents of the Constitution not one has proved true. The States are still strong, the President is not a despot, though for a time during the Civil War he came near being one, nor has he ever fallen under the influence of any European power. The House does not consist of the 'wealthy and well-born.' The larger States do not combine against nor press hardily on the smaller. No great country has had so few wars or indeed so few foreign complications of any kind¹. The Senate is still often called 'an oligarchy,' but this means only that it consists of comparatively few persons, most of them wealthy, and that it has a strong corporate feeling in favour of the personal interests of each of its members. It is really as dependent on public opinion as the House, perhaps even more afraid of public opinion, and as directly the creature of party machinery, though less directly of popular election.

One is surprised to find that of the many arrows of accusation levelled at the Constitution, all should have flown wide of the mark.

The deeper insight and more exact thinking of Hamilton and Madison fastened upon most of the real and permanent weaknesses in popular government. Yet even they could not foresee the particular forms which those weaknesses would assume in the new nation. To examine in detail the eight points specified above would involve an examination of American history for a century. I shall therefore simply indicate in a word or two the extent to which, in each case, the alarms or predictions of *The Federalist* may be deemed well grounded.

¹ Three wars since 1789: that of 1812, that of 1845, and that of 1898. Every one of these might no doubt have been avoided with honour, and two of them savoured of aggression, but the same may be said of nearly all the wars of European States.

1. The spirit of faction has certainly, as Madison expected, proved less intense over the large area of the Union than it did in the Greek republics of antiquity or in the several States from 1776 to 1789. On the other hand, the bonds of sympathy created by the Federal system have at times enabled one State to infect another with its own vehemence. But for South Carolina, there would have been no secession in 1861. Since 1880 the 'demon of faction' has been less powerful in the parties than at any previous date since the so-called 'Era of Good Feeling' in 1820.

2. Sudden popular impulses there have been. But finding a ready and constitutional expression in elections, they do not induce a resort to arms, while the elaborate system of checks on legislation seldom allows them to result in the passing of dangerous measures by Congress. In some States the risk of bad laws is serious, but it is lessened by the provisions of the Federal Constitution as well as by the veto power of the State Governor and the restrictions of recent State Constitutions.

3. The early history of the Union furnishes illustrations of feebleness and inconstancy in foreign policy, yet not greater than those which mark most monarchies. Royal caprice, or the influence of successive favourites, has proved more pernicious in absolute kingdoms or principalities than popular fickleness in republics. That the foreign policy of the United States was singularly consistent down till 1898, when it suddenly took an entirely 'new departure,' was not due to the Senate. It must be credited partly to the good sense of the people, partly to the fact that the position and interests of the nation prescribed certain broad and simple lines.

4. Whatever may be thought of its handling of private bills, Congress was seldom prone to haste or reckless expenditure in legislation on public matters, until it passed the amazing Pensions Act of 1890. Nor has it given the country too many laws. It has been on the whole more blameable for what it neglects or postpones

than for what it enacts. The censure is more true of the States, especially the newer Western States.

5. The House of Representatives has doubtless sought to extend its sway at the expense of other departments. Whether it has succeeded is a question on which competent observers in America itself differ; but the fact of their differing proves that the encroachments have not been considerable. Whenever the President is weak or unpopular, Congress seems to be gaining on the Executive Chief. When the latter is or seems strong, he can keep the Legislature at bay.

6. In the struggle which never quite ceases, though it is often scarcely noticed, between the States and the Federal Government, the States have on the whole lost ground. Nor are the larger States practically more formidable than the small ones. The largest is small compared with the immense Union. No State would now venture to brave the Federal Judiciary as Georgia did, and for a time did successfully (1832), in one of the painful cases regarding the Cherokee Indians.

7. The so-called Tyranny of the Majority, a subject too large to be fully examined here¹, has not hitherto proved a serious evil in America. This, however, is due rather to the character and habits of the people and their institutions generally than to the mere extent and population of the Union, on which the *Federalist* writers relied.

8. There has been some unwise Congressional legislation, especially in currency matters, and, of course, much more of unwise State legislation. But property is secure, and the sense of civic duty seems, on the whole, to be improving.

It will appear from this examination, and from the fact (noted a few pages back) that some remarkable developments which political life has taken never crossed the minds of the authors of *The Federalist*, that these wisest men of their time did not foresee what strike us

¹ The subject is discussed in the author's *American Commonwealth*, chaps. lxxxiv and lxxxv.

to-day as the specially characteristic virtues and faults of American democracy. Neither the spoils system nor the system of party nominations by wire-pullers crossed their minds. They did not foresee the inordinate multiplication of elections, nor the evils of confining eligibility for a seat in the legislature to a person resident in the electing district, nor the disposition to 'play down' to the masses by seductive proposals. That the power which money might come to exert lay quite out of their view is not to be wondered at, for no large fortunes then existed. No student of history will deem that these omissions detract from their greatness, for history teaches nothing more plainly than the vanity of predictions in the realm of what we call the moral and political sciences, in religion, in ethics, in sociology, in government and politics. Deep thinkers help us when they unfold those permanent truths of human nature which come everywhere into play. Historians help us when, by interpreting the past, they demonstrate what are the tendencies that have gone to create the present. Observers keen enough to interpret the underlying phenomena of their own time may help us by showing which of the tendencies now at work are likely to become ruling factors in the near future. But beyond the near future—that is to say, beyond the lifetime of the generation which already holds power—no true philosopher will venture. He may indulge his fancy in picturing the details of the remoter landscape; but he knows that it is a region fit for fancy, not for science. In the works of great thinkers there are to be found some happy guesses about times to come; but these are few indeed, compared with the prophecies whose worthlessness was so soon revealed that men forgot they had ever been made, or the dreams which, like those of Dante, idealized an impossible future from an irrevocable past.

As regards the views of Hamilton and Madison, who, be it remembered, do not present themselves as prophets, but as the censors of present evils which they

are seeking to remedy, it may be added that the Constitution which they framed and carried checked some of these very evils (*c.g.* the unjust law-making and reckless currency experiments of the State Legislatures); and that it was obviously impossible till the Federal government had begun to work to say how the existing forces could adapt themselves to it. Hamilton remarks in one of his letters that he holds with Montesquieu that a nation's form of government ought to be fitted to it as a suit of clothes is fitted to its wearer¹. He would doubtless have added that one cannot make sure of the fit until the suit has been tried on.

We must remember, moreover, that the causes which have affected the political growth of America are largely causes which were in 1788 altogether beyond human ken. The cotton gin, Napoleon's willingness to sell Louisiana, steam communications by water and land, Irish and German immigration, have swayed the course of that history; but even the first of these factors had not risen over the horizon in that year, and the last did not become potent till halfway through the nineteenth century².

What the sages of the Convention do show us are certain tendencies they discern in their contemporaries, *viz.*:—

Recklessness and unwisdom in the masses, producing bad laws.

Unwillingness to submit to or support a strong government.

Abuse by the majority of its legal power over the minority.

Indifference to national as compared with local and sectional interests, and consequent preference of State loyalty to national loyalty.

¹ 'I hold with Montesquieu that a government must be fitted to a nation as much as a coat to the individual; and consequently that what may be good at Philadelphia may be bad at Paris and ridiculous at Petersburg.' To Lafayette, Jan. 6, 1799.

² The first cargo of cotton was sent from America to Europe in 1791, and the cotton gin invented in 1793.

That each of these tendencies then existed, and might have been expected to work for evil, admits of no doubt. But if we ask American history what it has to say about their subsequent course, the answer will be that the second and third tendencies have declined, and do not at present menace the public welfare, while the first, though never absent and always liable to marked recrudescence, as the annals of the several States prove, has done comparatively little harm in the sphere of national government. As to the fourth, which Hamilton seems to have chiefly feared, it ultimately took the form, not of a general centrifugal force, impelling each State to fly off from the system, but of a scheme for the separation of the Southern or slave-holding States into a separate Confederacy, and in this form it received, in 1865, a crushing and apparently final defeat¹.

IV. TOCQUEVILLE AND HIS BOOK.

Fifty-one years after the recognition of the independence of the United States, sixty-seven years before the beginning of the twentieth century, Alexis de Tocqueville published his *Democracy in America*, one of the few treatises on the philosophy of politics which has risen to the rank of a classic. His book, therefore, stands rather further than halfway back between our own days and those first days of the Republic which we know from the writings of the Fathers, of Washington, Jefferson, Adams, Hamilton, Madison. It offers a means of measuring the changes that had passed on the country during the half-century from the birth of the Union to the visit of its most famous European critic, and again from the days of that critic to our own.

It is a classic, and because it is a classic, one may venture to canvas it freely without the fear of seeming

¹ When we come to Tocqueville, we shall find him touching but lightly on the two first of the above tendencies (partly, perhaps, because he attends too little to the State governments), but emphasizing the third and fearing from the fourth the dissolution of the Union.

to detract from the fame of its author. The more one reads Tocqueville, the more admiration does one feel for the acuteness of his observation, for the delicacy of his analysis, for the elegant precision of his reasonings, for the limpid purity of his style; above all, for his love of truth and the elevation of his character. He is not only urbane, but judicial; not only noble, but edifying. There is perhaps no book of the generation to which he belonged which contains more solid wisdom in a more attractive dress.

We have here, however, to regard the treatise, not as a model of art and a storehouse of ethical maxims, but as a picture and criticism of the government and people of the United States. And before using it as evidence of their condition seventy years ago, we must appraise the reliance to be placed upon it ¹.

First let it be observed that not only are Tocqueville's descriptions of democracy as displayed in America no longer true in many points, but that in certain points they never were true. That is to say, some were true of America, but not of democracy in general, while others were true of democracy in general, but not true of America. It is worth while to attempt to indicate the causes of such errors as may be discovered in his picture, because they are errors which every one who approaches a similar task has to guard against. Tocqueville is not widely read in the United States, where the scientific, historical, and philosophical study of the institutions of the country, apart from the legal study of the Constitution, is of comparatively recent growth. He is less read than formerly in England and even in France. But his views of the American government and people have so passed into the texture of our thoughts that we cannot shake off his influence, and, in order to profit by it, are bound to submit his conclusions and predictions to a searching though always respectful examination.

¹ Some interesting remarks upon Tocqueville's tour in America and upon his views of American affairs may be found in President Gilman's Introduction to a recent edition (1898) of the English translation of Tocqueville's book.

The defects of the book are due to three causes. He had a strong and penetrating intellect, but it moved by preference in the *a priori* or deductive path, and his power of observation, quick and active as it was, did not lead but followed the march of his reasonings. It will be found, when his method is closely scrutinized, that the facts he cites are rather the illustrations than the sources of his conclusions. He had studied America carefully and thoroughly. But he wanted the necessary preparation for that study. His knowledge of England, while remarkable in a native of continental Europe, was not sufficient to show him how much in American institutions is really English, and explainable only from English sources.

He wrote about America, and meant to describe it fully and faithfully. But his heart was in France, and the thought of France, never absent from him, unconsciously coloured every picture he drew. It made him think things abnormal which are merely un-French; it made him attach undue importance to phenomena which seemed to explain French events or supply a warning against French dangers.

He reveals his method in the introduction to his book. He draws a fancy sketch of a democratic people, based on a few general principles, passes to the condition of France, and then proceeds to tell us that in America he went to seek the type of democracy—democracy pure and simple—in its normal shape.

‘J’avoue que dans l’Amérique, j’ai vu plus que l’Amérique; j’y ai cherché une image de la démocratie elle-même, de ses penchants, de son caractère, de ses préjugés, de ses passions.’

Like Plato in the *Republic*, he begins by imagining that there exists somewhere a type or pattern of democracy, and as the American Republic comes nearest to this pattern, he selects it for examination. He is aware, of course, that there must be in every country and people many features special to the country which reappear

in its government, and repeatedly observes that this or that is peculiar to America, and must not be taken as necessarily or generally true of other democracies. But in practice he underrates the purely local and special features of America, and often, forgetting his own scientific cautions, treats it as a norm for democracy in general. Nor does he, after finding his norm, proceed simply to examine the facts and draw inferences from them. In many chapters he begins by laying down one or two large principles, he develops conclusions from them, and then he points out that the phenomena of America conform to these conclusions. Instead of drawing the character of democracy from the aspects it presents in America, he arrives at its character by a sort of intuitive method, and uses those aspects only to point and enforce propositions he has already reached. It is not democracy in America he describes, but his own theoretic view of democracy illustrated from America. He is admirably honest, never concealing or consciously evading a fact which he perceives to tell against his theories. But being already prepossessed by certain abstract principles, facts do not fall on his mind like seeds on virgin soil. He is struck by those which accord with, he is apt to ignore those which diverge from, his preconceptions. Like all deductive reasoners, he is peculiarly exposed to the danger of pressing a principle too far, of seeking to explain a phenomenon by one principle only when it is perhaps the result of an accidental concurrence of several minor causes. The scholasticism we observe in him is due partly to this deductive habit, partly to his want of familiarity with the actualities of politics. An instance of it appears in his tendency to overestimate the value of constitutional powers and devices, and to forget how often they are modified, almost reversed, in practice by the habits of those who use them. Though no one has more judiciously warned us to look to the actual working of institutions and the ideas of the men who work them rather than to their letter, he has him-

self failed to observe that the American Constitution tends to vary in working from its legal theory, and the name Legislature has prevented him, like so many other foreign observers, from seeing in the English Parliament an executive as well as a law-making body.

In saying that he did not know England, I fully admit that his knowledge of that country and its free government was far beyond the knowledge of most cultivated foreigners. He had studied its history and had gathered from his reading the sentiments of its aristocracy and of its literary men. But he did not know the ideas and habits of the English middle class, with whom the Americans of his time might better have been compared, and he was not familiar—as how could a stranger be?—with the details of English politics and the working of the English judicial system. Hence he has failed to grasp the substantial identity of the American people with the English. He perceives that there are many and close resemblances, and traces much that is American to an English source. He has seen and described with perfect justness and clearness the mental habits of the English and American lawyer as contrasted with those of the French lawyer. But he has not grasped, as perhaps no one but an Englishman or an American can grasp, the truth that the American people of 1830 was a branch of the English people, modified in some directions by the circumstances of its colonial life and its more popular government, but in essentials the same. Hence much that was merely English appeared to Tocqueville to be American or democratic. The functions of the judges, for instance, in expounding the Constitution (whether of the Federation or of a State) and disregarding a statute which conflicts therewith, the responsibility of an official to the ordinary courts of the land, the co-existence of laws of a higher and lower degree of authority, seem to him to be novel and brilliant inventions instead of mere instances of general doctrines of English law, adapted to the circumstances of a colony

dependent on a home Government, or of a State partially subordinated to a Federal Government. The absence of what the French call 'Administration,' and the disposition to leave people to themselves, which strike him, would not surprise an Englishman accustomed to the like freedom. Much that he remarks in the mental habits of the ordinary American, his latent conservatism for instance, his indifference to amusement as compared with material comfort, his commercial eagerness and tendency to take a commercial view of all things, might have been just as well remarked of the ordinary middle-class Englishman, and had nothing to do with a democratic government. Other features, which he ascribes to this last-named cause, such as habits of easy social intercourse, the disposition to prize certain particular virtues, the readiness to give mutual help, are equally attributable to the conditions of life that existed among settlers in a wild country where few persons were raised by birth or wealth above their fellows, and every one had need of the aid of others—conditions whose results remained in the temper of the people even when the community had passed into another phase, a phase in which inequalities of wealth were already marked, and temptations had begun to appear which did not beset the Puritans of the seventeenth century.

It is no reproach to this great author that France formed to him the background of every picture whose foreground was the New World. He tells us frankly in the Introduction that the phenomena of social equality, as they existed in France, and the political consequences to be expected from them, filled his mind when he examined the institutions of America; he hoped to find there lessons by which France might profit: 'J'ai voulu y trouver des enseignements dont nous puissions profiter.' But with this purpose before him, he could hardly avoid laying too much stress on points which seemed to have instruction for his own countrymen, and from fancying those things to be abnormal, or at least spe-

cially noteworthy, which stood contrasted with the circumstances of France. Tocqueville is, among eminent French writers, one of the least prone to assume the ways and ideas of his own country to be the rule, and those of another country the exception; yet even in him the tendency lurks. There is more than a trace of it in his surprise at the American habit of using without abusing political associations, and at the disposition of Legislatures to try experiments in legislation, a disposition which struck him chiefly by its contrast with the immutability which the Code of the First Empire seemed to have stamped upon the private law of France.

His constant reference to France goes deeper than the method of the book. It determines his scope and aim. The *Democracy in America* is not so much a political study as a work of edification. It is a warning to France of the need to adjust her political institutions to her social condition, and above all to improve the tone of her politics, to create a moral and religious basis for her national life, to erect a new fabric of social doctrine, in the place of that which, already crumbling, the Revolution had overthrown. We must not, therefore, expect to find in him a complete description and criticism, such as a German would have given, of the government of America in all its details and aspects. To note this is not to complain of the book. What Tocqueville has produced is more artistic, and possibly more impressive than such a description would have been, as a landscape gives a juster notion of scenery than a map. His book is permanently valuable, because its reflections and exhortations are applicable not merely to the Frenchmen of sixty-five years ago, but to mankind generally, since they touch upon failings and dangers permanently inherent in political society. Let it only be remembered that, in spite of its scientific form, it is really a work of art quite as much as a work of science, and a work suffused with strong, though carefully repressed, emotion.

The best illustration I can give of these tendencies in

our author will be found in a comparison of the first part of the book, published in 1834, and now included in the first and second volumes of recent editions, with the second part published in 1840, and now forming the third volume. In the first part the author keeps near his facts. Even when he has set out on the *a priori* road he presently brings his theory into relation with American phenomena: they give substance to, and (so to speak) steady the theory, while the theory connects and illumines them. But in the second part (third volume) he soars far from the ground, and is often lost in the clouds of his own sombre meditation. When this part was written, the direct impressions of his transatlantic visit had begun to fade from his mind. With all his finesse and fertility, he had neither sufficient profundity of thought, nor a sufficient ample store of facts gathered from history at large, to enable him to give body and substance to his reflections on the obscure problems wherewith he attempts to deal¹. Hence, this part of the book is not so much a study of American democracy as a series of ingenious and finespun abstract speculations on the features of equality and its results on modern society and thought, speculations which, though they have been singled out for admiration by some high judges, such as Ampère and Laboulaye, will appear to most readers overfanciful, overconfident in their effort to construct a general theory applicable to the infinitely diversified facts of human society, and occasionally monotonous in their repetition of distinctions without differences and generalities too vague, perhaps too hollow, for practical use.

How far do these defects of Tocqueville's work affect its value for our present purpose, that of discovering from it what was the condition, political, social, intellectual, of the United States in 1833, and what the forces

¹ Sainte-Beuve remarks of him, 'Il a commencé à penser avant d'avoir rien appris : ce qui fait qu'il a quelquefois pensé creux.' Thiers once said, in the Chamber, 'Quand je considère intuitivement, comme dirait M. de Tocqueville.'

that were then at work in determining the march of the nation and the development of its institutions?

It is but slightly that they impair its worth as a record of facts. Tocqueville is so careful and so unprejudiced an observer that I doubt if there be a single remark of his which can be dismissed as either erroneous or superficial. There is always some basis for every statement he makes. But the basis is occasionally too small for the superstructure of inference, speculation, and prediction which he rears upon it. To borrow an illustration from chemistry, his analysis is always right so far as it is qualitative, sometimes wrong where it attempts to be quantitative. The fact is there, but it is perhaps a smaller fact than he thinks, or a transient fact, or a fact whose importance is, or shortly will be, diminished by other facts which he has not adequately recognized.

When we pass from description to argument he is a less safe guide. By the light of subsequent experience we can perceive that he mistook transitory for permanent causes. Many of the phenomena which he ascribes to democracy were due only to the fact that large fortunes had not yet grown up in America, others to the absence, in most parts of the country, of that higher education and culture which comes with wealth, leisure, and the settlement of society. I have already observed that he sometimes supposes features of American politics to be novel and democratic which are really old and English; that he does not allow sufficiently for the imprint which colonial life had left on the habits and ideas of the people, an imprint which, though it tends to wear off with time, is yet also modified into something which, while you may call it democratic, remains different from the democracy of an old European country, and is not an index to the character of democracy in general.

It need hardly be said that the worth of a book like his is not to be measured by the number of flaws which can be discovered under the critic's microscope. Even a sovereign genius like Aristotle cannot be expected to

foresee which of the influences he discerns will retain their potency: it is enough if his view is more piercing and more comprehensive than that of his greatest contemporaries, if his record shows the high-water mark of the learning and philosophy of the time. Had history falsified far more of Tocqueville's predictions than she has done, his work would still remain eminently suggestive and stimulating. And it is edificatory not merely because it contains precepts instinct with the loftiest morality. It is a model of that spirit of fairness and justice, that love of pure truth which is conspicuously necessary, and not less conspicuously difficult, in the discussion, even the abstract discussion, of the problems of political philosophy. Few books inspire a higher respect for their writer.

V. TOCQUEVILLE'S VIEW OF THE UNITED STATES.

Before we examine the picture of the social and political phenomena of America which Tocqueville has drawn, let us see what were the chief changes that had passed on the territory of the Union, on its material resources, on the habits and ideas of the people, during the forty-six years that elapsed from the publication of the *Federalist* to that of the *Démocratie en Amérique*.

The territory of the United States had been extended to include the whole valley of the Mississippi, while to the north-west it stretched across the Rocky Mountains as far as the Pacific. All beyond the Missouri was still wilderness, much of it wholly unexplored, but to the east of the Mississippi there were now twenty-four States with an area of 2,059,043 square miles and a population of fourteen millions. The new Western States, though rapidly increasing, were still so raw as to exercise comparatively little influence on the balance of national power, which vibrated between the free Northern and the Southern Slave States. Slavery was not an immediately menacing question, for the first wound it

made had been skinned over, so to speak, by the Missouri Compromise of 1820; but it was evidently pregnant with future trouble, for the number of slaves was rapidly increasing, and the slaveholders were already resolved to retain their political influence by the creation of new slave States. The great Federalist party had vanished, and the Republican-Democratic party, which had triumphed over it, had just been split into several bitterly hostile factions. Questions of foreign policy were no longer urgent, for Europe had ceased to menace America, who had now no neighbours on her own continent except the British Crown on the north and the Mexican Republic on the south and west. The protective tariff and the existence of the United States Bank were the questions most agitated, but the main dividing party lines were still those which connected themselves with the stricter or looser interpretation of the Federal Constitution—that is to say, they were questions as to the extent of Federal power on the one hand, as to the rights of the States on the other. New England was still Puritan and commercial, with a bias towards protective tariffs, the South still agricultural, and in favour of free trade. The rule of the masses had made its greatest strides in New York, the first, among the older States, which introduced the new methods of party organization and which thoroughly democratized her Constitution¹. Everywhere property qualifications for office or the electoral franchise were being abolished, and even the judges formerly nominated by the State Governor or chosen by the State Legislature were beginning to be elected by manhood suffrage and for terms of years. In fact a great democratic wave was passing over the country, sweeping away the old landmarks, destroying the respect for authority, casting office and power more and more into the hands of the humbler classes, and causing the withdrawal from public life of men of education and refinement. State feeling was still

¹ The process of democratization was completed by the Constitution of 1846.

strong, especially in the South, and perhaps stronger than national feeling, but the activity of commerce and the westward movement of population were breaking down the old local exclusiveness, and those who saw steamboats plying on the Hudson and heard that locomotive engines were beginning to be run in England, might have foreseen that the creation of more easy, cheap, and rapid communications would bind the sections of the country together with a new and irresistible power. The time was one of great commercial activity and great apparent prosperity; but large fortunes were still few, while in the general pursuit of material objects science, learning, and literature had fallen into the background. Emerson was still a young Unitarian minister, known only to the circle of his own friends. Channing was just rising into note; Longfellow and Hawthorne, Prescott and Ticknor had not begun to write. Washington Irving was one of the few authors whose names had reached Europe. How disagreeable the manners of ordinary people (for one must of course except the cultivated circles of Boston and Philadelphia) seemed to the European visitor may be gathered from the diaries of Richard Cobden and Sir Charles Lyell, who travelled in America a year or two after Tocqueville. There was a good deal of ability among the ruling generation of statesmen—the generation of 1787 was just dying out with Madison—but only three names can be said to have survived in the world's memory, the names of three party leaders who were also great orators, Clay, Calhoun, and Webster ¹.

In those days America was a month from Europe and comparatively little affected by Europe. Her people walked in a vain conceit of their own greatness and freedom, and scorned instruction from the effete monarchies of the Old World, which in turn repaid them

¹ To none of whom, oddly enough, does Tocqueville refer. He is singularly sparing in his references to individuals, mentioning no one except President Jackson for blame and Livingston (author of the Louisiana Code and Secretary of State, 1831-3) for praise.

with contemptuous indifference. Neither continent had realized how closely its fortunes were to be interwoven with those of the other by trade and the movements of population. No wheat, no cattle were sent across the Atlantic, nor had the flow of immigration from Ireland, much less from Central Europe, as yet begun.

The United States of 1834 had made enormous advances in material prosperity. Already a great nation, it could become a great power as soon as it cared to spend money on fleets and armies. The Federal government had stood the test of time and of not a few storms. Its component parts knew their respective functions, and worked with less friction than might have been expected. The sense of national unity, powerfully stimulated by the war of 1812, was still growing. But the level of public life had not risen. It was now rather below than above that of average private society. Even in the realm of morality there were strange contrasts. A puritan strictness in some departments of conduct and a universal recognition of the sanctions of religion co-existed in the North with some commercial laxity, while the semi-civilized South, not less religious and valuing itself on its high code of honour, was disgraced by the tolerance accorded to duels and acts of murderous violence, not to speak of the darker evils which slavery brought in its train. As respects the government of States and cities, democratic doctrines had triumphed all along the line. The masses of the people had now realized their power, and entered into the full fruition of it. They had unlimited confidence in their wisdom and virtue, and had not yet discovered the dangers incidental to the rule of numbers. The wise elders, or the philosophic minds who looked on with distrust, were either afraid to speak out, or deemed it hopeless to try to stem the flowing tide. They stood aside (as Plato says) under the wall out of the storm. The party organizations had just begun to spread their tough yet flexible network

over the whole country; and the class of professional politicians, at once the creator and the creature of such organizations, was already formed. The offices had, three years before, been proclaimed to belong to the victors as spoils of war, but few saw to what consequences this doctrine was to lead. I will not say that it was a period of transition, for that is true of every period in America, so fast do events move even in the quietest times; but it was a period when that which had been democratic theory was passing swiftly into democratic practice, when the seeds sown long ago by Jefferson had ripened into a waving crop, when the forces which in every society react against extreme democracy were unusually weak, some not yet developed, some afraid to resist the stream.

VI. TOCQUEVILLE'S IMPRESSIONS AND PROPHECIES.

Let us see what were the impressions which the America of 1832 made on the mind of Tocqueville. I do not pretend to summarize his account, which every student ought to read for himself, but shall be content with presenting the more salient points that ought to be noted in comparing 1832 with 1788 on the one hand, and 1900 on the other.

He is struck by the thoroughness with which the principle of the sovereignty of the people is carried out. Seventy years ago this principle was far from having obtained its present ascendancy in Western Europe. In America, however, it was not merely recognized in theory, but consistently applied through every branch of local, State, and National government.

He is impressed by the greater importance to ordinary citizens of State government than of Federal government, and their warmer attachment to the former than to the latter. The Federal government seems comparatively weak, and in case of a conflict between the

two powers, the loyalty of the people would be given rather to the State¹.

He finds the basis of all American government in the 'commune,' *i.e.* in local government, the ultimate unit of which is in New England the township, in the Southern and Middle States the county. It is here that the bulk of the work of administration is done, here that the citizens learn how to use and love freedom, here that the wonderful activity they display in public affairs finds its chief sphere and its constant stimulus.

The absence of what a European calls 'the administration' is remarkable. Public work is divided up between a multitude of petty and unrelated local officials: there is no 'hierarchy,' no organized civil service with a subordination of ranks. The means employed to keep officials to their work and punish offences are two—frequent popular election and the power of invoking the ordinary courts of justice to obtain damages for negligence or unwarranted action. But along with the extreme 'administrative decentralization' there exists a no less extreme 'governmental centralization,' that is to say, all the powers of government are collected into one hand, that of the people, the majority of the voters. This majority is omnipotent; and thus authority is strong, capable of great efforts, capable also of tyranny. Hence the value of local self-government, which prevents the abuse of power by a central authority: hence the necessity for this administrative decentralization, which atones for its want of skill in details by the wholesome influence it exerts on the character of the people.

The judges enjoy along with the dignity of their European brethren the singular but most salutary power of 'declaring laws to be unconstitutional,' and thus they serve to restrain excesses of legislative as well as of executive authority.

The President appears to our author to be a com-

¹ His insistence on this point makes it all the more strange that he does not give any description of a State as a commonwealth, nor characterize the general features of its government.

paratively weak official. No person, no group, no party, has much to hope from the success of a particular candidate at a Presidential election, because he has not much to give away[!]. The elective system unduly weakens executive authority, because a President who approaches the end of his four years' term feels himself feeble, and dares not take any bold step: while the coming in of a new President may cause a complete change of policy. His re-eligibility further weakens and abases him, for he must purchase re-election by intrigue and an unworthy pandering to the desires of his party. It intensifies the characteristic fault of democratic government, the predominance of a temporary majority.

The Federal Supreme Court is the noblest product of the wisdom of those who framed the Federal Constitution. It keeps the whole machine in working order, protecting the Union against the States, and each part of the Federal government against the aggressions of the others. The strength of the Federation, naturally a weak form of government, lies in the direct authority which the Federal courts have over the individual citizen: while the action of these Courts, even against a State, gives less offence than might be expected because they do not directly attack its statutes, but merely, at the instance of an individual plaintiff or defendant, secure to him rights which those statutes may have incidentally infringed.

The Federal Constitution is much superior to the State Constitutions; the Federal Legislature, Executive and Judiciary, are all of them more independent of the popular majority, and freer in their action than the corresponding authorities in the several States. Similarly the Federal government is better than those of the States, wiser, more skilful, more consistent, more firm.

The day of great parties is past: there is now a feverish agitation of small parties and a constant effort to create parties, to grasp at some principle or watchword under which men may group themselves, probably for selfish

ends. Self-interest is at the bottom of the parties, yet aristocratic or democratic sentiment attaches itself to each of them, that is to say, when a practical issue arises, the old antithesis of faith in the masses and distrust of the masses reappears in the view which men and parties take of it. The rich mix little in politics. Secretly disgusted at the predominance of the crowd, they treat their shoemaker as an equal when they meet him on the street, but in their luxurious homes lament the vulgarity of public life and predict a bad end for democracy.

Next to the people, the greatest power in the country is the press: yet it is less powerful than in France, because the number of journals is so prodigious, because they are so poorly written, because there is no centre like Paris. Advertisements and general news occupy far more of their space than does political argument, and in the midst of a din of opposing voices the ordinary citizen retains his dull fixity of opinion, the prejudices of his sect or party.

A European is surprised, not only at the number of voluntary associations aiming at public objects, but at the tolerance which the law accords to them. They are immensely active and powerful, and do not threaten public security as they would in France, because they admit themselves, by the very fact of their existence, to represent a minority of voters, and seek to prevail by force of argument and not of arms.

Universal suffrage, while it gives admirable stability to the government, does not, as people in Europe expect that it will, bring the best men to the top. On the contrary, the governors are inferior to the governed¹. The best men do not seek either office or a seat in the House of Representatives, and the people, without positively hating the 'upper classes,' do not like them; and care-

¹ This is a common remark of visitors to America, but it arises from their mistaking the people they see in society for 'the governed' in general. They go carrying introductions to rich or educated people: if they mixed with the masses they would form a different notion of 'the governed,' as Tocqueville rather oddly calls the ordinary citizens.

fully keep them out of power. 'Il ne craint point les grands talents, mais il les goûte peu.'

The striking inferiority of the House to the Senate is due to the fact that the latter is a product of double election, and it is to double election that democracies must come if they will avoid the evils inseparable from placing political functions in the hands of every class of the people¹.

American magistrates are allowed a wider arbitrary discretion than is common in Europe, because they are more constantly watched by the sovereign people, and are more absolutely at their mercy².

Every office is, in America, a salaried office; nor can anything be more conformable to the spirit of a democracy. The minor offices are, relatively to Europe, well paid, the higher ones ill paid. Nobody wears any dress or displays any insignia of office³.

Administration has both an unstable and an unscientific character. Few records are kept of the acts of departments: little information is accumulated: even original documents are neglected. Tocqueville was sometimes given such documents in answer to his queries, and told that he might keep them. The conduct of public business is a hand to mouth, rule of thumb sort of affair⁴.

Not less instability reigns in the field of legislation. Laws are being constantly changed; nothing remains fixed or certain⁵.

¹ It is surprising that Tocqueville should have supposed this to be the cause of the excellence he ascribes to the Senate, considering that the more obvious, as well as the true, explanation is to be found in the fact that the wider powers and longer term of the Senate made the ablest men seek entrance to it.

² The only instance given of this is in the discretion allowed to the officers of the New England townships, whose functions are, however, unimportant. The statement cannot have been generally true.

³ This remained true till very recent years as regards public officials, save and except the Judges of the Supreme Court when sitting at Washington. But lately the Supreme Court Judges of some States have begun to wear gowns.

⁴ This has ceased to be true in Federal administration, and in that of the more advanced States.

⁵ Tocqueville does not say whether he intends this remark to apply to State legislation only or to Federal legislation also. He quotes dicta of Hamilton, Madison, and Jefferson to the same effect, but these testimonies, or most of them, refer to a

It is a mistake to suppose that democratic governments are specially economical. They are parsimonious in salaries, at least to the higher officials, but they spend freely on objects beneficial to the mass of the people, such as education, while the want of financial skill involves a good deal of waste. You must not expect economy where those who pay the bulk of the taxes are a mere fraction of those who direct their expenditure. If ever America finds herself among dangers, her taxation will be as heavy as that of European monarchies.

There is little bribery of voters, but many charges against the integrity of politicians. Now the corruption of the 'governors' is worse than that of the 'governed,' for it lowers the tone of public morals by presenting the spectacle of prosperous turpitude.

The American democracy is self-indulgent and self-complacent, slow to recognize, still more slow to correct, its faults. But it has the unequalled good fortune of being able to commit reparable errors (*la faculté de faire des fautes réparables*). It can sin with impunity.

It is eminently ill-fitted to conduct foreign policy. Fortunately it has none.

The benefits which American society derives from its democratic government are summed up as follows:—

As the majority make the laws, their general tendency, in spite of many errors in detail, is to benefit the majority, because though the means may sometimes be ill chosen, the end is always the same. Hence the country prospers.

Every one is interested in the welfare of the country, because his own welfare is bound up with it. This patriotism may be only an enlarged egotism, but it is powerful nevertheless, for it is a permanent sentiment, independent of transient enthusiasms. Its character ap-

time anterior to the creation of the Federal Constitution. If it is true that State laws were being constantly changed in 1832, this can have been true only of administrative statutes, not of private law generally. One is tempted to believe that Tocqueville was unconsciously comparing America with France, where the Code has arrested legislation to an extent surprising to an English observer.

pears in the childish intolerance of criticism which the people display. They will not permit you to find fault with any one of their institutions or habits, not even if you praise all the rest ¹.

There is a profound respect for every political right, and therefore for every magistrate, and for the authority of the law, which is the work of the people themselves. If there be exceptions to this respect, they are to be found among the rich, who fear that the law may be made or used to their detriment.

The infinite and incessant activity of public life, the responsibilities it casts on the citizen, the sense of his importance which it gives him, have stimulated his whole nature, and made him enterprising in all private affairs also. Hence, in great measure, the industrial prosperity of the country. Democracy effects more for the material progress of a nation than in the way of rendering it great in the arts, or in poetry, or in manners, or in elevation of character, or in the capacity for acting on other nations and leaving a great name in history.

We now come to the darker side of the picture. In democracies, the majority is omnipotent, and in America the evils hence flowing are aggravated by the shortness of the term for which a legislature is chosen, by the weakness of the Executive, by the incipient disposition to choose even the judges by popular vote, by the notion universally accepted that the majority must be right. The majority in a legislature being unchecked, laws are hastily made and altered, administration has no permanence, officials are allowed a dangerously wide range of arbitrary authority. There is no escape from the tyranny of the majority. It dominates even thought, forbidding, not indeed by law, but through social penalties no less effective than legal ones, the expression of any opinion displeasing to the ordinary citizen. In the

¹ Every one knows how frequently European visitors used to comment upon this American trait. It is now much less noticeable than formerly. I can even say from experience that it has sensibly diminished since 1870.

ology, even in philosophy, one must beware of any divergence from orthodoxy. No one dare tell an unwelcome truth to the people, for it will receive nothing but incense. Such repression sufficiently explains the absence of great writers and of great characters in public life. It is not therefore of weakness that free government in America will ever perish, but through excess of strength, the majority driving the minority to despair and to arms.

There are, however, influences which temper the despotism of the majority. One is the existence of a strong system of local self-government, whereby nearly all administration is decentralized. Another is the power of the lawyers, a class everywhere disposed to maintain authority and to defend that which exists, and specially so disposed in England and America because the law which they study and practise is founded on precedents and despises abstract reason. A third exists in the jury, and particularly the jury in its action in civil causes, for it teaches the people not only the regular methods of law and justice, but respect for law and for the judges who administer it.

Next we come to an enumeration of the causes which maintain republican government. They are, over and above the constitutional safeguards already discussed, the following:—

The absence of neighbouring States, and the consequent absence of great wars, of financial crises¹, of invasions or conquests. How dangerous to republics is the passion for military glory is shown by the two elections of General Jackson to be President, a man of violent temper and limited capacity, recommended by nothing but the memory of his victory at New Orleans twenty years before².

¹ This observation seems strange indeed to any one who remembers the commercial history of the United States since the great crisis of 1838.

² Jackson's popularity began with his military exploit; but his hold on the people was due to other causes also. His election coincided with the rise of the great democratic wave already referred to.

The absence of a great capital.

The material prosperity of the country, due to its immense extent and natural resources, which open a boundless field in which the desire of gain and the love of independence may gratify themselves and render the vices of man almost as useful to society as his virtues. The passions which really agitate America are commercial, not political.

The influence of religion. American Protestantism is republican and democratic; American Catholicism no less so; for Catholicism itself tends to an equality of conditions, since it treats all men alike. The Catholic clergy are as hearty republicans as any others.

The indirect influence of religion on manners and morality. Nowhere is marriage so much respected and the relations of the sexes so well ordered. The universal acceptance of Christianity, an acceptance which imposes silence even on the few sceptics who may be supposed to exist there as everywhere, steadies and restrains men's minds. 'No one ventures to proclaim that everything is permissible in the interests of society. Impious maxim, which seems to have been invented in an age of liberty in order to give legitimacy to all tyrants to come.' The Americans themselves cannot imagine liberty without Christianity. And the chief cause why religion is so powerful among them is because it is entirely separated from the State¹.

The intelligence of the people, and their education, but especially their practical experience in working their local politics. However, though everybody has some education, letters and culture do not flourish. The Americans regard literature properly so called with disfavour: they are averse to general ideas. They have no great historian, not a single poet, legal commentators but no publicists, good artisans but very few inventors[!]

¹ I do not profess to summarize in these few lines all that Tocqueville says of the character and influence of Christianity in the United States, for he devotes many pages to it, and they are among the wisest and most permanently true that he has written.

Of all these causes, the most important are those which belong to the character and habits of the people. These are infinitely more important sources of well-being than the laws, as the laws are in turn more important than the physical conditions ¹.

Whether democracy will succeed in other parts of the world is a question which a study of America does not enable the observer confidently to answer. Her institutions, however suitable to her position in a world of her own, could not be transferred bodily to Europe. But the peace and prosperity which the Union enjoys under its democratic government do raise a strong presumption in favour of democracy even in Europe. For the passions and vices which attack free government are the same in America as in Europe, and as the legislator has overcome many of them there, combating envy by the idea of rights, and the presumptuous ignorance of the crowd by the practice of local government, he may overcome them here in Europe likewise.

One may imagine institutions for a democracy other than those the Americans have adopted, and some of them better ones. Since it seems probable that the peoples of Europe will have to choose between democracy and despotism, they ought at least to try the former, and may be encouraged by the example of America.

A concluding chapter is devoted to speculations on the future of the three races which inhabit the territories of the United States. I need not transcribe what he says of the unhappy Indian tribes. Their fate was then already certain: the process which he saw passing in Alabama and Michigan afterwards repeated itself in California and Oregon.

The presence of the blacks is the greatest evil that threatens the United States. They increase, in the Gulf States, faster than do the whites. They cannot be kept

¹ Like most of his contemporaries, Tocqueville failed to appreciate the enormous influence of physical environment, which has, however, doubtless increased, so far as America is concerned, through the scientific discoveries made since the date of his journey.

for ever in slavery, since the tendencies of the modern world run strongly the other way. They cannot be absorbed into the white population, for the whites will not intermarry with them, not even in the North where they have been free for two generations. Once freed, they would be more dangerous than now, because they would not long submit to be debarred from political rights. A terrible struggle would ensue. Hence the Southern Americans, even those who regret slavery, are forced to maintain it, and have enacted a harsh code which keeps the slave as near as possible to a beast of burden, forbidding him to be taught and making it difficult for him to be manumitted. No one in America seems to see any solution. The North discusses the problem with noisy inquietude. The South maintains an ominous silence. Slavery is evidently economically mischievous, for the free States are far more prosperous: but the South holds to slavery as a necessity.

As to the Federal Union, it shows many signs of weakness. The States have most of the important powers of government in their hands; they have the attachment of the people; they act with vigour and promptitude, while the Federal authority hesitates and argues. In every struggle that has heretofore arisen the Federal Government has given way, and it possesses neither the material force to coerce a rebellious State nor a clear legal right to retain a member wishing to dissolve the Federal tie. But although the Union has no national patriotism to support it (for the professions of such patriotism one hears in America are but lip-deep), it is maintained by certain interests—those material interests which each part of the country has in remaining politically united with the rest. Against these one finds no strong interests making for material severance, but one does find diversities, not indeed of opinion—for opinions and ideas are wonderfully similar over the whole country—but of character, particularly between Northern and Southern men, which increase the chances of discord.

And in the rapid growth of the Union there lies a real source of danger. Its population doubles every twenty-two years. Before a century has passed its territory will be covered by more than a hundred millions of people and divided into forty States¹. Now all partnerships are more difficult to keep together the more the number of partners increases². Even admitting, therefore, that this hundred millions of people have similar interests and are benefited by remaining united, still the mere fact that they will then form forty nations, distinct and unequally powerful, will make the maintenance of the Federal Government only a happy accident. 'I cannot believe in the duration of a government whose task is to hold together forty different peoples spread over a surface equal to the half of Europe, to avoid rivalries, ambitions, and struggles among them, and to unite the action of their independent wills for the accomplishment of the same plans³.'

The greatest danger, however, which the Union incurs as it grows is the transference of forces which goes on within its own body. The Northern States increase more rapidly than the Southern, those of the Mississippi Valley more rapidly still. Washington, which when founded was in the centre of the Union, is now at one end of it. The disproportionate growth of some States menaces the independence of others. Hence the South has become suspicious, jealous, irritable. It fancies itself oppressed because outstripped in the race of prosperity and no longer dominant. It threatens to retire from a partnership whose charges it bears, but whose profits it does not share⁴.

Besides the danger that some States may withdraw

¹ There are now forty-five, with a population of nearly eighty millions.

² No proof is given of this proposition, which is by no means self-evident, and which has indeed all the air of a premiss laid down by a schoolman of the thirteenth century.

³ He has, however, nowhere attempted to prove that the States deserve to be called 'nations' or 'peoples.'

⁴ The protective tariff was felt as a grievance by the South, being imposed in the interest of the Northern and Middle States. No doubt, the North got more pecuniary gain out of the Union than the South did.

from the Union (in which case there would probably be formed several federations, for it is highly unlikely that the original condition of State isolation would reappear), there is the danger that the central Federal authority may continue to decline till it has become no less feeble than was the old Confederation. Although Americans fear, or pretend to fear, the growth of centralization and the accumulation of powers in the hands of the Federal Government, there can be little doubt that the central authority has been growing steadily weaker, and is less and less able to face the resistance of a refractory State. The concessions of public territory made to the States, the hostility to the United States Bank, the (virtual) success of South Carolina in the Nullification struggle, are all proofs of this truth. General Jackson, now (1832) President, is at this moment strong, but only because he flatters the majority and lends himself to its passions. His personal power may increase, but that of the President declines. 'Unless I am strangely mistaken, the Federal Government of the United States tends to become daily weaker; it draws back from one kind of business after another, it more and more restricts the sphere of its action. Naturally feeble, it abandons even the appearance of force. On the other side, I think I perceive that in the United States the sentiment of independence becomes more and more lively in the States, and the love of provincial government more and more pronounced. People wish to keep the Union, but to keep it reduced to a shadow: they would like to have it strong for some purposes and weak for the rest—strong in war and almost non-existent in peace—forgetting that such alternations of strength and weakness are impossible.'

Nevertheless the time when the Federal power will be extinguished is still distant, for the continuance of the Union is desired, and when the weakness of the Government is seen to threaten the life of the Union, there may be a reaction in its favour.

Whatever may be the future of the Federation, that

of republicanism is well assured. It is deeply rooted not only in the laws, but in the habits, the ideas, the sentiments, even the religion of the people. It is indeed just possible that the extreme instability of legislation and administration may some day disgust the Americans with their present government, and in that case they will pass rapidly from republicanism to despotism, not stopping by the way in the stage of limited monarchy. An aristocracy, however, such as that of the old countries of Europe, can never grow up. Democratic equality will survive, whatever be the form which government may take.

This brief summary, which conveys no impression of the elegance and refinement of Tocqueville's reasonings, need not be pursued to include his remarks on the commercial and maritime greatness of the United States, nor his speculations on the future of the Anglo-American race. Still less shall I enter on the second part of the book, for (as has been observed already) it deals with the ideas of democracy and equality in a very abstract and sometimes unfruitful way, and it would need a separate critical study.

But before passing on to consider how far the United States now differs from the republic which the French philosopher described, we must pause to ask ourselves whether his description was complete.

It is a salutary warning to those who think it easy to get to the bottom of the political and social phenomena of a nation, to find that so keen and so industrious an observer as Tocqueville, who seized with unrivalled acuteness and described with consummate art many of the minor features of American politics, omitted to notice several which had already begun to show their heads in his day, and have since become of the first importance. Among these are—

The system of party organization. It was full grown in some States (New York for instance), and spreading quickly through the rest.

The influence of commercial growth and closer commercial relations in binding together different States of the Union and breaking down the power of State sentiment. He does in one passage refer to this influence, but is far from appreciating the enormous force it was destined to exercise, and must have exercised even without railways.

The results of the principle proclaimed definitely just before his visit, and already operative in some places, that public office was to be bestowed as a reward for political service, and held only so long as the party which bestowed it remained in power.

The assertion by President Monroe of the intention of the United States to regard as unfriendly (*i.e.* to do their best to resist) any extension of the 'European system' to the American Continent, and any further colonization thereof or intrusion by European powers thereon.

The rise of the Abolitionists (they had begun to organize themselves before 1830, and formed a National Anti-Slavery Society in 1833) and the intense hostility they aroused in the South.

The growth of the literary spirit, and the beginnings of literary production. The society which produced Washington Irving, Fenimore Cooper, Channing, Hawthorne, Emerson, Longfellow, Thoreau, Prescott, Ticknor, Margaret Fuller, Holmes, Lowell, Parkman—not to add some almost equally famous later names—deserved mention as a soil whence remarkable fruits might be expected which would affect the whole nation. Yet it is not once referred to, although one can perceive that Tocqueville had spent some time in Boston, for many of his views are evidently due to the conversations he held with the leading Whigs of that day there.

The influence of money on politics. It might surely have been foretold that in a country with such resources, and among a people whose restless commercial activity would be able to act on a vast scale, great piles of wealth

would soon be accumulated, that this wealth would perceive objects which it might accomplish by legislative aid, would seek to influence governments, and would find ample opportunities for doing so. But of the dangers that must thence arise we do not hear a word.

VII. EXAMINATION OF TOCQUEVILLE'S VIEWS.

Such was the aspect of the United States in 1832, such the predictions which an unusually penetrating and philosophic mind formed of its future. I will not attempt to inquire how far the details of the picture are accurate, because it would be unprofitable to contest statements without assigning one's own reasons, while to assign them would lead me into a historical disquisition. A shorter and simpler course will be to inquire in what respects things have changed since his time, for thus we shall be in a position to discern which of the tendencies he noted have proved permanent, what new tendencies have come into being, what are the main tendencies which are now controlling the destinies of the Republic.

I have noted at the end of last section the phenomena which, already existing in Tocqueville's day, he omitted to notice or to appraise to their due value. Let us see what time has brought forward since his day to alter the conditions of the problem as he saw it.

The great events that have befallen since 1834 are these:—

The annexation of Texas in 1845.

The war with Mexico in 1846, leading to the enlargement of the United States by the vast territories which are now California, Nevada, Utah, Idaho, Arizona, and New Mexico.

The making of railways over the whole country, culminating with the completion of four or five great Trans-Continental roads (the first in 1869).

The establishment of lines of swift ocean steamers between America and Europe.

The immigration from Ireland (immensely increased after the famine of 1846), and from Germany (beginning somewhat later), and from Scandinavia, Austria-Hungary, and Russia (later still).

The War of Secession, 1861-65; together with the extinction of Slavery.

The laying of submarine cables to Europe, and the extension of telegraphic communication over the whole Union.

The settlement of the Alabama claims, an event scarcely less important in American history than in English, because it greatly diminished the likelihood of a war between the two countries. In Tocqueville's time the hatred of Americans to England was rancorous.

The growth of great cities. In 1830, only two had a population exceeding 100,000. There are now (census of 1900) thirty-eight which exceed that population¹.

The growth of great fortunes, and of wealthy and powerful trading corporations; the extension of mining, especially silver and gold mining; the stupendous development of speculation, not to say gambling, in stocks and produce.

The growth of the universities and of many kindred literary and scientific institutions.

The war with Spain in 1898, and consequent annexation of Hawaii (which might probably not have been taken but for naval needs supposed to have been disclosed by the war), of Puerto Rico, and of the Philippine Isles.

These are events which have told directly or indirectly upon politics. I go on to enumerate the political changes themselves of the same sixty-seven years.

Democratization of State Constitutions, total abolition of property qualifications, choice of judges (in most States) by popular vote and for terms of years, restric-

¹ In 1790 there were only six cities with populations of at least 8,000. There are now 545. The percentage of urban to rural population (taking urban as that of a city of 8,000) was then 3.4 and is now 33.1.

tions on the power of State Legislatures, more frequent use of the popular vote or so-called Referendum¹.

Development of the Spoils System, consequent degradation of the increasingly large and important civil service, both Federal, State, and Municipal.

Perfection and hierarchical consolidation, on nominally representative but really oligarchic lines, of party organizations; consequent growth of Rings and Bosses, and demoralization of city government.

Enfranchisement of the negroes through amendments to the Constitution.

Intensification of National (as opposed to State) sentiment consequent on the War of Secession; passion for the national flag; rejection of the dogmas of State sovereignty and right of nullification.

Increased importance of currency and other financial problems: emergence of industrial questions as bases for party organization: efforts to found a Labour Party and a 'People's Party.'

To these I add, as powerfully affecting politics, the development not only of literary, scientific and historical studies, but in particular of a new school of publicists, who discuss constitutional and economic questions in a philosophic spirit; closer intellectual relations with Europe, and particularly with England and Germany; resort of American students to German Universities; increased interest of the best class of citizens in politics; improved literary quality of the newspapers and of periodicals (political and semi-political) generally; growth of a critical and sceptical spirit in matters of religion and philosophy; diminished political influence of the clergy.

We may now ask which of Tocqueville's observations have ceased to be true, which of his predictions falsified. I follow the order in which they were presented in the last section.

¹ Especially in the form of the amendment of particular provisions of State Constitutions.

Although the powers of the several States remain in point of law precisely what they were (except as regards the Constitutional amendments presently to be noticed) and the citizen depends as much now as then upon the State in all that relates to person and property, to the conduct of family and commercial relations, the National or Federal Government has become more important to him than it was then. He watches its proceedings more closely, and, of course, thanks to the telegraph, knows them sooner and more fully. His patriotism is far more national, and in case of a conflict between one or more States and the Federal power, the sympathies of the other States would probably be with the latter.

Local government has been maintained in its completeness, but it seems to excite less interest among the people. In the larger cities it has fallen into the hands of professional politicians, who have perverted it into a grasping and sordid oligarchy.

There is still, as compared with Continental Europe, little 'administration,' though more than in Tocqueville's time. But the influence of Federal legislation on the business of the country is far greater than it was, for the tariff and the currency, matters of increased consequence ever since the war, are in its hands.

The dignity of the judicial bench has in most States suffered seriously from the system of popular election for comparatively short terms. In those States where nomination by the Executive has been retained, and in the case of the Federal Judges (nominated by the President), the position is perhaps the highest permanent one open to a citizen.

The President's authority received a portentous enlargement during the War of Secession, and although it has now returned to its normal condition, the sense of its importance has survived. His election is contested with increasing excitement, for his immense patronage and the magnitude of the issues he may influence by his veto power give individuals and parties the strongest

grounds for hope and fear. Experience has, on the whole, confirmed the view that the re-eligibility of an acting President (*i.e.* the power of electing him for an immediately succeeding term) might well be dispensed with.

The credit of the Supreme Court suffered somewhat from its pro-slavery decisions just before the war, and may possibly have suffered slightly since in respect of its treatment of the Legal Tender question. Nevertheless it remains respected and influential.

The State Constitutions, nearly all of which have been re-enacted or largely amended since 1834, remain inferior to the Federal Constitution, and the State legislatures are, of course (possibly with a very few exceptions in the New England States), still more inferior to Congress.

Two great parties reappeared immediately after Tocqueville wrote, and except for a brief interval before the Civil War when the Whig party had practically expired before its successor and representative the Republican party had come to maturity, they have continued to divide the country, making minor parties of slight consequence. Now and then an attempt is made to start a new party as a national organization, but it rarely becomes strong enough to maintain itself. The rich and educated renewed their interest in politics under the impulse of the Slavery and Secession struggle. After a subsequent interval of apathy they seem to be again returning to public life. The secret murmurs against democracy, whereof Tocqueville speaks, are confined to a handful of fashionable exquisites less self-complacent now than they were in the days when they learnt luxury and contempt for the people in the Paris of Louis Napoleon.

Although newspapers are better written than formerly and those of the great cities travel further over the country, the multitude of discordant voices still prevents the people from being enslaved by the press, which however

shows an alarming capacity for exciting them. The habit of association by voluntary societies maintains itself.

The defects of the professional politicians, a term which now more precisely describes those whom Tocqueville calls by the inappropriate European name of 'the governors,' continue at least as marked as in his time.

So, too, the House of Representatives continues less influential than the Senate, but for other reasons than those which Tocqueville assigns, and to a less degree than he describes. The Senate has not, since 1880, maintained the character he gives it; and the fact that it is still chosen in the way which he commended shows that the merits he ascribed to it were not due to its mode of choice. Indeed in the judgement of most thoughtful men, popular election in the States would give a better Senate than election by the State Legislatures now does.

American magistrates never did in general enjoy the arbitrary power Tocqueville ascribes to them. They assuredly do not enjoy it now, but in municipalities there is a growing tendency to concentrate power, especially the appointing power, in the hands of one or a few officers in order that the people may have some one person on whom responsibility can be fixed. Such power is sometimes very wide, but it cannot be called arbitrary. A few minor offices are unsalaried; the salaries of the greater ones have been raised, particularly in the older States.

The methods of administration, especially of Federal administration, have been much improved, but are still behind those of the most advanced European countries, one or two departments excepted.

Government is far from economical. The war of the Rebellion was conducted in the most lavish way: the high protective tariff raises a vast revenue, and direct local taxation takes more from the citizen than in most European countries. An enormous sum is spent upon

pensions to persons who purport to have served in the Northern armies during the Civil War¹.

Congress does not pass many public statutes, nor do they greatly alter ordinary law within the sphere open to federal legislation. Many legislative experiments are tried in the newer States, but the ordinary private law is in no such condition of mutability as Tocqueville describes. The law of England suffered more changes between 1868 and 1885 than either the common or statute law of the older States of the Union.

The respect for the rights of others, for the regular course of legal process, for the civil magistrate, remains strong; nor have the rich (although of late years more threatened) seriously begun to apprehend any attacks on them, otherwise than as stockholders in great railway and other corporations.

The tyranny of the majority is not a serious evil in the America of to-day, though people still sometimes profess alarm at it. It cannot act through a State legislature so much as it may have done in Tocqueville's days, for the wings of these bodies have been effectively clipped by the newer State constitutions. Faint are the traces which remain of that intolerance of heterodoxy in politics, religion or social views whereon he dilates². Politicians on the stump still flatter the crowd, but many home truths are told to it nevertheless in other ways and places, and the man who ventures to tell them need no longer fear social proscription (at least in time of peace) in the Northern or Western States, perhaps not even in the Southern.

The Republic came scatheless out of a terrible civil war, and although the laurels of the general who concluded that war twice secured for him the Presidency, they did not make his influence dangerous to freedom.

¹ In 1892 the expenditure on this head was \$155,000,000; in 1901 it was estimated at \$142,000,000.

² Competent American observers in Tocqueville's own time thought he greatly exaggerated this danger. See a letter from Jared Sparks printed in Professor Herbert B. Adams' interesting monograph *Jared Sparks and Alexis de Tocqueville*, in Johns Hopkins University Studies, 1898.

There is indeed no great capital, but there are cities greater than most European capitals, and the Republic has not been imperilled by their growth. The influence of the clergy on public affairs has declined: whether or no that of religion has also been weakened it is more difficult to say. But all Americans are still agreed that religion gains by its entire detachment from the State.

The negro problem remains, but it has passed into a new and for the moment less threatening phase. Neither Tocqueville nor any one else then living could have foreseen that manumission would come as a war measure, and be followed by the grant of political rights. It is no impeachment of his judgement that he omitted to contemplate a state of things in which the blacks have been made politically the equals of the whites, while inferior in most other respects, and destined, apparently, to remain wholly separate from them. He was right in perceiving that fusion was not possible, and that liberation would not solve the problem, because it would not make the liberated fit for citizenship. Fit—that is to say, as fit as a considerable part of the white population—they will probably in the long run become, but even then the social problem will remain. His remark that the repulsion between the races in the South would probably be greater under freedom than under slavery has so far been strikingly verified by the result.

All the forces that made for the maintenance of the Federal Union are now stronger than they were then, while the chief force that opposed it, viz., the difference of character and habits between North and South, largely produced by the existence of slavery, tends to vanish. Nor does the growth of the Union make the retention of its parts in one body more difficult. On the contrary, the United States is a smaller country now when it stretches from the Bay of Fundy to the Gulf of California, with its seventy-six millions of people, than it was then with its thirteen millions, just as the civilized world was larger in the time of Herodotus than it is now,

for it took twice as many months to travel from Persepolis or the Caspian Sea to the Pillars of Hercules as it does now to circumnavigate the globe, one was obliged to use a greater number of languages, and the journey was incomparably more dangerous. Before steamboats plied on rivers, and trains ran on railways, three or four weeks at least were consumed in reaching Missouri from Maine. Now one goes in six days of easy travelling right across the continent.

Nor has the increased number of States bred more dissensions. The forty-five States of to-day are not as Tocqueville assumes, and this is the error which vitiates his reasonings, forty-five nations. The differences in their size and wealth have become greater, but they work more harmoniously together than ever heretofore, because neither the lines which divide parties nor the substantial issues which affect men's minds coincide with State boundaries. The Western States are now, so far as population goes, the dominant section of the Union, and become daily more so. But their interests link them more closely than ever to the North Atlantic States, through which their products pass to Europe, and the notion once entertained of moving the capital from Washington to the Mississippi valley has been quietly dropped.

VIII. CONCLUDING SUMMARY.

Before bidding farewell to our philosopher, let us summarize his conclusions.

He sees in the United States by far the most successful and durable form of democratic government that has yet appeared in the world.

Its merits are the unequalled measure of freedom, freedom of action, but not of thought, which it secures to the ordinary citizen, the material and social benefits it confers on him, the stimulus it gives to all his practical faculties.

These benefits are likely to be permanent, for they rest upon the assured permanence of

Social equality ;
Local self-government ;
Republican institutions ;
Widely diffused education.

It is true that these benefits would not have been attained so quickly nor in such ample measure but for the extraordinary natural advantages of the New World. Nevertheless, these natural advantages are but subsidiary causes. The character of the people, trained to freedom by experience and by religion, is the chief cause, their institutions the second, their material conditions only the third ; for what have the Spaniards made of like conditions in Central and South America ¹ ?

Nevertheless, the horizon is not free from clouds.

What are these clouds ?

Besides slavery and the existence of a vast negro population they are—

The conceit and ignorance of the masses, perpetually flattered by their leaders, and therefore slow to correct their faults.

The withdrawal from politics of the rich, and inferior tone of ' the governors,' *i.e.* the politicians.

The tyranny of the majority, which enslaves not only the legislatures, but individual thought and speech, checking literary progress, and preventing the emergence of great men.

The concentration of power in the legislatures (Federal and State), which weakens the Executive, and makes all laws unstable.

The probable dissolution of the Federal Union, either by the secession of recalcitrant States or by the slow decline of Federal authority.

There is therefore warning for France in the example

¹ The conditions of most parts of the tropical regions of South and Central America are in reality quite different from those of the American Union taken as a whole.

of America. But there is also encouragement—and the encouragement is greater than the warning.

Of the clouds which Tocqueville saw, one rose till it covered the whole sky, broke in a thunderstorm, and disappeared. Others have silently melted into the blue. Some still hang on the horizon, darkening parts of the landscape.

Let us cast one glance back at the course which events have actually taken as compared with that which Hamilton first, and Tocqueville afterwards, expected.

The Republic fared far otherwise than as Hamilton and his friends either hoped or feared. In this there is nothing to impeach their wisdom. They saw the dangers of their own time, and like wise and patriotic men provided the best remedies which existing conditions permitted. Some dangers they overcame so completely, particularly the financial misdoings of State legislatures, that these have now passed out of memory. They could not foresee what the power of money would become, because there was then little money in the country. They could not foresee the astonishing development of party machinery, because it is a perfectly new thing in the history of the world: and human imagination never does more, at any rate in the field of politics and sociology, than body forth things a little bigger than, or in some other wise a little varying from, what they have been before. It cannot create something out of nothing. Least of all could they divine what the results would be of the coexistence of the money power and the party machine. Nor did even Tocqueville, writing half a century later, when wealth had already appeared and the party machine was in places beginning to work, perceive what both had in store.

How would Tocqueville amend his criticisms were he surveying the phenomena of to-day?

He would add to his praise of the United States that its people re-established their government on firm foundations after a frightful civil war, that their army went

back to its peaceful occupations, that they paid off their debt, that they have continued to secure a free field for an unparalleled industrial development and to maintain a hitherto unattained standard of comfort, that the level of knowledge and intellectual culture has risen enormously. He would admit that he had overrated the dangers to be feared from a tyrannical majority and had underrated the strength of the Union. But he would stand aghast, as indeed all the best citizens in the United States do now, at the mismanagement and corruption of city governments. He would perceive that the party organizations have now become the controlling force in the country, more important than the Legislature or the Executive. He would recognize the evils incident to the habit of regarding public office as a means of private advantage to its holder and the bestowal of it as a reward for party services. And he would, while gladly owning that the older forms of faction had ceased to be alarming, note a new development which the spirit of faction has taken in the tendency to look at and deal with both legislation and foreign affairs from the point of view of party advantage. Want of foresight or insight in those who direct the affairs of a mighty nation is at all times a misfortune: but when foresight and insight are set aside for the sake of some transitory party gain, the results may be even more serious.

This, however, is a tendency inherent in all schemes of government by party. It is familiar and formidable in European countries also.

VII

TWO SOUTH AFRICAN CONSTITUTIONS¹

I. THE CONDITIONS UNDER WHICH THESE CONSTITUTIONS AROSE.

THE old Greek saying, 'Africa is always bringing something new²,' finds an unexpected application in the fact that there exist in South Africa two Dutch republics possessing constitutions diverse in type from any of those which we find subsisting in other modern States. The system established by these two South African instruments resembles neither the English, or so-called 'Cabinet,' system of government,—which has been more or less imitated by the other free countries of Europe, and has been reproduced in the self-governing British colonies,—nor the American, or so-called 'Presidential,' system, as it exists in the United States and the several States of the American Union. And although it bears some resemblance to the constitution of the Swiss Confederation and to the constitutions of the cantons of Switzerland, this resemblance is not a close

¹ This Essay was composed early in 1896, and describes the Constitutions of the Orange Free State and South African Republic as they stood in December 1895, the month when the fatal invasion of the latter Republic by the police of the British S. Africa Company took place. I have left it, for obvious reasons, substantially unchanged, save that here and there I have corrected what seemed to be errors, have added one or two references to recent events, and have explained some constitutional points with more fullness. In its original form, the Essay appeared in the *Forum* in April 1896.

² Λέγεται τις παροιμία ὅτι ἀεὶ φέρει Λιβύη τι καινόν. Arist. *Hist. Anim.* viii. 28.

one, and is evidently not due to conscious imitation, but to a certain similarity of phenomena suggesting similar devices. The constitutions of these two Dutch republics are the product, the pure and original product, of African conditions, having drawn comparatively little from the experience of older countries, or from the models their schemes of government afford. Moreover, these South African constitutions grew up upon a perfectly virgin soil. There was no pre-existing political organization, such as the old feudal polities supplied in some countries of Europe, out of which these Republics could develop themselves. There were no charters or guilds or companies, such as those which gave their earliest form to the governments of several of the older American States. Nor was there any home pattern to be copied, as the British colonies have, by the aid of statutes of the Imperial Parliament, copied the constitution of the United Kingdom.

This is one of the most interesting features of these Constitutions. They are not specifically Dutch. Neither are they English. Nothing is more uncommon in history than an institution starting *de novo*, instead of being naturally evolved out of some earlier form. The simple farmers who drafted the documents which I propose to describe, knew little about the systems either of Europe or of America. Few possessed any historical, still fewer any legal, knowledge. Many were uneducated men, though with plenty of rough sense and mother wit. They would have liked to get on without any government, and were resolved to have as little as possible. Circumstances, however, compelled them to form some sort of organization; and in setting to work to form one, with little except their recollections of the local arrangements of Cape Colony to guide or to assist them, they came as near as any set of men ever have come to the situation which philosophers have so often imagined, but which has so rarely in fact occurred—that of free and independent persons uniting in an absolutely new social

compact for mutual help and defence, and thereby creating a government whose authority has had, and can have had, no origin save in the consent of the governed.

A few preliminary words are needed to explain the circumstances under which the constitutions of the Orange Free State and of the South African Republic (commonly called the Transvaal) were drawn up.

As early as 1820 a certain number of farmers, mostly of Dutch origin, living in the north-eastern part of Cape Colony, were in the habit of driving their flocks and herds into the wilderness north of the Orange River, where they found good fresh pasture during and after the summer rains. About 1828 a few of these farmers established themselves permanently there, still of course remaining subjects of the British Crown, which had acquired Cape Colony first by conquest and then by purchase in 1806 and 1814. In 1835-6, however, a much greater number of farmers migrated from the colony; some in larger, some in smaller bodies. They had various grievances against the British Government, some dating back as far as 1815: and they desired to live by themselves in their own way, untroubled by the Governors whom it sent to rule the country¹. Between 1835 and 1838 a considerable number of these emigrants moved into the country beyond the Orange River, some remaining there, others pushing still further to the north-east into the hitherto unknown regions beyond the Vaal River, while a third body, perhaps the largest, moved down into what was then a thinly peopled Kafir land, and is now the British colony of Natal. This is not the place in which to relate the striking story of their battles with the Zulu king and of their struggle with the British Government for the possession of Natal. It is enough to say that this third body ultimately quitted Natal to join the other emigrants north of the moun-

¹ A concise account of these grievances and a sketch of the subsequent history of the emigrants may be found in Dr. Theal's *Story of South Africa* (published by Messrs. Putnam), and in my *Impressions of South Africa*, chaps. xi and xii. See also Dr. Theal's larger *History of the Boers in South Africa*.

tains; and that, after many conflicts between those emigrants and the native tribes, and some serious difficulties with successive Governors of Cape Colony, the British Government finally, by a Convention signed at Sand River in 1852, recognized the independence of the settlers beyond the Vaal River, while, by a later Convention signed at Bloemfontein in 1854, it renounced the sovereignty it had claimed over the country between the Orange River and the Vaal River, leaving the inhabitants of both these territories free to settle their own future form of government for themselves.

These two Conventions are the legal and formal starting-points of the two republics in South Africa, and from them the history of those republics, as self-governing states, recognized in the community of nations by international law, takes its beginning. The emigrant farmers had, however, already been driven by the force of circumstances to establish some sort of government among themselves. As early as 1836 an assembly of one of the largest emigrant groups then dwelling in the Orange River Territory, elected seven persons to constitute a body with legislative and judicial power. In 1838 the Natal emigrants established a *Volksraad* (council of the people) which consisted of twenty-four members, elected annually, who met every three months and had the general direction of the affairs of the community, acting during the intervals between the meetings by a small committee called the *Commissie Raad*. All important measures were, however, submitted to a general meeting called the *Publiek*, in which every burgher was entitled to speak and vote. It was a primary assembly, like the Old English *Folk Mot*, or the *Landesgemeinde* of the older Swiss Cantons. A somewhat similar system prevailed among the farmers settled in the country beyond the Vaal River. They too had a *Volksraad*, or sometimes—for they were from time to time divided into separate and practically independent republican communities—several *Volksraads*; and each

district or petty republic had a commandant-general. Their organization was really more military than civil, and the commandant-general with his Krygsraad (council of war), consisting of the commandants and field cornets within the district, formed the nearest approach to a regular executive. I have unfortunately been unable to obtain proper materials for the internal political history, if such a term can be used, of these communities before they proceeded to enact the constitutions to be presently described, and fear that such materials as do exist are very scanty. But, speaking broadly, it may be said that, in all the communities of the emigrant farmers, supreme power was deemed to be vested in an assembly of the whole male citizens, usually acting through a council of delegates, and that the permanent officials were generally a magistrate, called a landrost, in each village, a field cornet in each ward, and a commandant in each district. All these officials were chosen by the people¹. In these primitive arrangements consisted the materials out of which a constitutional government had to be built up.

From this point the history of the Orange River Territory, which by the Convention of 1854 was recognized as the Orange Free State, and that of the Transvaal Territory begin to diverge. In describing the constitutions of the republics, I take first that of the Orange Free State, because it dates from 1854, while the existing constitution of the Transvaal is four years younger, having been adopted in 1858. The former is also by far the simpler and shorter document.

When the British Government in 1854 voluntarily divested itself of its rights over the Orange River Territory, greatly against the will of some of its subjects there, the inhabitants of that Territory were estimated at 15,000 Europeans, most of them of Dutch, the rest of

¹ I am indebted for most of these facts regarding the early organization of the emigrants to Dr. G. M. Theal's *History of the Boers in South Africa*, a book of considerable merit and interest, which, however, carries its narrative down only to 1854.

British origin. (The number of native Kafirs was much larger, but cannot now be estimated.) The great majority were farmers, pasturing their sheep and cattle on large farms, but five small villages already existed, one of which, Bloemfontein, has grown to be a town of 5,800 people, and is now the capital. The Volksraad, or assembly of delegates of the people, framed, and on April 10, 1854, enacted, a constitution for the new republic. This constitution was revised and amended in 1866, and again in 1879, but the main features of the original instrument remain. I proceed to deal with it as it now stands.

II. CONSTITUTION OF THE ORANGE FREE STATE.

This Constitution, which is in the Dutch language, and is called *De Constitutie*, is a terse and straightforward document of sixty-two articles, most of which are only a few lines in length¹. It begins by defining the qualifications for citizenship and the exercise of the suffrage (articles 1 to 4), and incidentally imposes the obligation of military service on all citizens between the ages of sixteen and sixty. Only whites can be citizens. New-comers may obtain citizenship if they have resided one year in the state and have real property to the value of at least £150 sterling (\$750), or if they have resided three successive years and have made a written promise of allegiance.

Articles 5 to 27 deal with the composition and functions of the Volksraad, or ruling assembly, which is declared to possess the supreme legislative authority. It consists of representatives (at present fifty-eight in number), one from each of the wards or Field Cornetcies, and one from the chief town or village of each of the (at present nineteen) districts. They are elected for four

¹ My thanks are due to the distinguished Chief Justice of the Free State (Mr. Melius de Villiers) for much information kindly furnished to me regarding this Constitution.

years, one-half retiring every two years. Twelve constitute a quorum. Every citizen is eligible who has not been convicted of crime by a jury or been declared a bankrupt or insolvent, who has attained the age of twenty-five years, and who possesses fixed (*i.e.* real) unmortgaged property of the value of £500 at least.

The Volksraad is to meet annually in May, and may be summoned to an extra session by its chairman, as also by the President (§ 34), or by the President and the Executive Council (§ 45).

The Volksraad has power to depose the President if insolvent or convicted of crime, and may also itself try him on a charge of treason, bribery, or other grave offence; but the whole Volksraad must be present or have been duly summoned, and a majority of three to one is required for conviction. The sentence shall in these cases extend only to deposition from office and disqualification for public service in future, a President so deposed being liable to further criminal proceedings before the regular courts.

The votes of members of the Volksraad shall be recorded on a demand by one-fifth of those present. The sittings are to be public, save where a special cause for a secret sitting exists.

The Volksraad shall make no law restricting the right of public meeting and petition.

It shall concern itself with the promotion of religion and education.

It shall promote and support the Dutch Reformed Church.

It may alter the constitution, but only by a majority of three-fifths of the votes in two consecutive annual sessions.

It has power to regulate the administration and finances, levy taxes, borrow money, and provide for the public defence.

Articles 28 to 41 deal with the choice and functions of the President of the state.

He is to be elected by the whole body of citizens, the Volksraad, however, recommending one or more persons to the citizens ¹.

He is chosen for five years and is re-eligible.

He is the head of the executive, charged with the supervision and regulation of the administrative departments and public service generally, and is responsible to the Volksraad, his acts being subject to an appeal to that body. He is to report annually to the Volksraad, to assist its deliberations by his advice, but without the right of voting, and, if necessary, to propose bills. He makes appointments to public offices, and may fill vacancies that occur when the Volksraad is not sitting, but his appointments require its confirmation. (Such confirmation has been hardly ever, if ever, refused.) He may also suspend public functionaries, but dismissal appears to require the consent of the Volksraad.

Articles 42 to 46 deal with the Executive Council. It consists of five members, besides the State President, who is *ex-officio* chairman, with a deciding or overriding vote (*bestissende stem*). Of these five, one is the landrost (magistrate) of Bloemfontein, another the State Secretary, both these officials being appointed by the President and confirmed by the Volksraad; the remaining three are elected by the Volksraad. This Council advises the President, but does not control his action in matters which the Constitution entrusts to him, reports its proceedings annually to the Volksraad, and has the rights, in conjunction with the President, of pardoning offenders and of declaring martial law.

Regarding the judicial power only two provisions require mention. Article 48 declares this power to be exclusively exercisable by the courts of law established by law. Article 49 secures trial by jury in all criminal causes in the superior courts.

Local government and military organization, subjects

¹ In practice, the recommendation of the majority of the Volksraad is looked upon as likely to ensure the election of the person so recommended.

intimately connected in Dutch South Africa, occupy articles 50 to 56 inclusive.

A field cornet is elected by the citizens of each ward, a field commandant by those of each district, in both cases from among themselves¹. In case of war, all the commandants and cornets taken together elect a Commandant-General, who thereupon receives his instructions from the President. Those who elected him may, with the consent of the President, dismiss him and choose another. Every field cornet and commandant must have landed property, the latter to the value of £200 at least.

Article 57 declares Roman Dutch law to be the common law of the state².

Articles 58 and 59 declare that the law shall be administered without respect of persons and that every resident shall be held bound to obey it, while articles 60, 61, and 62 guarantee the rights of property, of personal liberty, and of press freedom.

It will be convenient to defer general criticisms upon the frame of government established by this Constitution till we have examined that of the sister republic of the Transvaal, which agrees with it in many respects. But we may here briefly note, before passing further, a few remarkable features of the present instrument.

1. It is a Rigid constitution, *i.e.* one which cannot be changed in the same way and by the same authority as that whereby the ordinary law is changed, but which must be changed in some specially prescribed form—in this case, by a three-fourths majority of the Volksraad in two successive sessions³.

2. The body of the people do not come in as a vot-

¹ In the earlier days of Rome the army elected its subordinate officers.

² Roman Dutch law is the common law all over South Africa, even in the almost purely English colony of Natal (though of course not in Portuguese or German territory). It has been largely affected, especially in the British colonies, by recent legislation.

³ As to Rigid Constitutions, see Essay III.

ing power, save for the election of the President and Commandant-General. All other powers, even that of amending the constitution, belong to the Volksraad.

3. There is only one legislative chamber.

4. The President has no veto on the acts of the legislature.

5. The President has the right of sitting in and addressing the legislature.

6. The President's Council is not of his own choosing, but is given him by the legislature.

7. The heads of the executive departments sit neither in the Council nor in the legislature.

8. The legislature may apparently reverse any and every act of the President, save those (pardon of offences and declaration of martial law) specially given to him and the Executive Council.

American readers will have noted for themselves some few points in this Constitution which have been drawn from that of the United States. Others are said to have been suggested by the Constitution framed for the French Republic in 1848. Comparatively few controversies upon the construction of the Constitution have been debated with any warmth. One, which gave rise to a difference of opinion between the Volksraad and the Supreme Court of the state, arose upon the question whether the Volksraad has power to punish a citizen for contempt by committing him to prison for a long term, and to direct the State Attorney to prosecute him. The judges disapproved what they deemed an unconstitutional stretching of authority by the legislature. Using the opportunities of influencing public opinion which the delivery of charges to juries gave them, they ultimately so affected the mind of the people that the Volksraad tacitly retired from its position, leaving the question of right undetermined.

III. CONSTITUTION OF THE SOUTH AFRICAN REPUBLIC.

The South African Republic, or Transvaal State as it is popularly called, is ruled by a much longer, much less clear, and much less systematically arranged document than that established by its sister commonwealth¹. A considerable part of the contents of this constitution is indeed unfit, as too minute, for a fundamental instrument of government; and, whatever the intention of its framers may have been, it has not in fact been treated as a fundamental instrument. Whether it is really such, in strict contemplation of law, is a question often discussed in professional circles in Pretoria and Johannesburg. I shall summarize the more important of its provisions—they occupy two hundred and thirty-two articles—and endeavour therewith to present an outline of the frame of government which they establish.

The Grondwet (Ground-law) or Constitution was drafted by a committee of an assembly of delegates and approved by the assembly itself in February, 1858. It is in Dutch, but has been translated into English more than once.

Article 6 declares the territory of the republic open to every stranger who submits himself to the laws—a provision noteworthy in view of recent events—and declares all persons within the territory equally entitled to the protection of person and property.

Article 8 states, *inter alia*, that the people ‘permit the spread of the Gospel among the heathen, subject to prescribed provisions against the practice of fraud and deception’; a provision upon whose intention light is thrown by the suspicions felt by the Boërs of the English missionaries.

Article 9 declares that ‘the people will not tolerate

¹ I have to thank my friend Mr. J. G. Kotzé, late Chief Justice of the South African Republic, for information kindly supplied to me regarding certain points in this Constitution.

equality between coloured and white inhabitants either in church or in state ¹.'

Article 10 forbids slavery or dealing in slaves.

Article 19 grants the liberty of the press.

Articles 20 to 23 formerly declared that the people would maintain the principles of the doctrine of the Dutch Reformed Church, as fixed by the Synod of Dort in 1618 and 1619, that the Dutch Reformed Church shall be the Church of the State, that no persons shall be elected to the Volksraad who are not members of that Church, that no ecclesiastical authority shall be acknowledged save that of the consistories of that Church, and that no Roman Catholic Churches, nor any Protestant Churches save those which teach the doctrine of the Heidelberg Catechism, shall be permitted within the republic. But these archaic provisions were in the revised Grondwet of 1889 reduced to a declaration that only members of a Protestant Church should be elected to the Volksraad ².

After these general provisions we come to the frame of government. Legislation is committed to a Volksraad, 'the highest authority of the state.' It is to consist of at least twelve members (the number is at present twenty-four) who must be over thirty years of age and possess landed property. Each district returns an equal number of members. Residence within the district is not required of a candidate. The members were formerly elected for two years, and one-half retired annually. Their term was afterwards extended to four years. Every citizen who has reached the age of twenty-one enjoys the suffrage ³ (persons of colour are of course

¹ The Boers are a genuinely religious people, and read their Bibles. But they have shown little regard to 1 Corinthians xii. 13; Galatians iii. 28; and Colossians iii. 11. The same may be said of the people of the Southern States of America; and is indeed also true of the less religious English both in South Africa and in the West Indies.

² I am informed that even this restriction was abolished subsequently to 1895.

³ The suffrage was by subsequent enactments restricted as respects immigrants and the sons of immigrants; and in 1895 a person coming into the country could not obtain full electoral rights till after a period of twelve years. In July 1899, three

incapable of voting or of being elected). The unworkable provision of the old Grondwet that 'any matter discussed shall be decided by three-fourths of the votes' was subsequently repealed.

Three months are to be given to the people for intimating to the Volksraad their opinion on any proposed law, 'except laws which admit of no delay' (§ 12), but laws may be discussed whether published three months before their introduction or introduced during the session of the Volksraad (§ 43). The sittings are to open and close with prayer, and are to be public, unless the chairman or the President of the Executive Council deems secrecy necessary.

If the high court of justice declares the President, or any member of the Executive Council, or the Commandant-General, unfit to fill his office, the Volksraad shall remove from office the person so declared unfit and shall provide for filling the vacant office.

The administration, as well as the proposal, of laws was by the old Grondwet given to an Executive Council (§ 13). The revised instrument vests it in the State President. The President is elected for five years by the citizens voting all over the country. He must have attained the age of thirty and be a member of a Protestant (formerly of the Dutch Reformed) Church (§ 56). He is the highest officer of the state, and appoints all officials. All public servants, except those who administer justice, are subordinate to him and under his supervision. In case of his death, dismissal, or inability to act, his functions devolve on the oldest member of the Executive Council till a new appointment is made. The Volksraad shall dismiss him on conviction of any serious offence. He is to propose laws to the Volksraad—'whether emanating from himself or sent in to him by the people'—and support them in that body either personally or through a member of the Executive Council. He has,

months before the war which broke out in that year, the period was shortened to seven years owing to pressure by the British Government.

however, no right to vote in the Volksraad. He recommends to the Volksraad persons for appointment to public posts; and may suspend public servants, saving his responsibility to the Volksraad. He submits an estimate of revenue and expenditure, reports on his own action during the past year and on the condition of the republic, visits annually all towns and villages where any public office exists to give due opportunity to the inhabitants of stating their wishes.

The Executive Council consists of four official members besides the President, namely, the State Secretary, the Commandant-General, the Superintendent of Native Affairs, and the Keeper of Minutes (*Notulenhouder*), and of two other members. All except the Commandant-General are elected by the Volksraad; the Secretary for four years, the two other members for three years. The Commandant-General is elected by the burghers of the whole republic for ten years. All, including the President, are entitled to sit, but not to vote, in the Volksraad. The President and Council carry on correspondence with foreign powers, and may commute or remit a penal sentence. A sentence of death requires the unanimous confirmation of the Council. The President may, with the unanimous consent of the Council, proclaim war and publish a war ordinance summoning all persons to serve (§§ 23, 66, 84).

The provisions relating to the military organization (§§ 93-114) are interesting chiefly as indicating the highly militant character of the republic. Express provision is made not only for foreign war and for the maintenance of order at home, but also for the cases of native insurrection and of disaffection or civil war among the whites. The officers are all elected by the burghers, the Commandant-General by the whole body of burghers for ten years, the commandants in each district for five years, the field cornets and assistant field cornets in the wards for three years.

The judiciary (§§ 115-135) consists of landrosts (magis-

trates who also discharge administrative duties), heemraden (local councillors or assessors), and jurors. The provisions regarding the exercise of judicial power are minute and curious in their way, but have no great interest for constitutional purposes. Two landrosts are proposed to the people of the judicial district by the Executive Council, and the people vote between these two. Minute provisions regarding the oaths to be taken by these officials and by jurymen, and regarding the penalties they may inflict, fill the remaining articles. A guarantee for the independence of the courts is to be found in the general statement in article 15 that 'the judicial power is vested in landrosts, heemraden, and jurors,' and in the declaration (§ 57) that the judicial officers are 'left altogether free and independent in the exercise of their judicial power.' A High Court and a Circuit Court, not provided for in the old Grondwet, appear in that of 1889, and are appointed for life. The High Court consists of a chief justice and four puisne judges.

The old Grondwet also contained some curious details relating to civil administration (which was primarily entrusted to the judicial officers, supported by the commandants and field cornets), and the revenue of the State, which was intended to be drawn chiefly from fees and licences, the people having little disposition to be directly taxed. The farm tax was not to exceed forty dollars, and the poll-tax, payable by persons without or with only one farm, was fixed at five dollars annually. Five dollars was the payment allowed to each member of the Volksraad for each day's attendance. Most of these provisions have disappeared from the instrument of 1889. The salary of the President of the Council, which had been fixed at 5,333 dollars, 2 schellings, and 4 stuivers, to be increased as the revenue increased, now amounts to £7,000 sterling (\$35,000) per annum, besides allowances.

The most considerable change made since 1889 was

the establishment, in 1890, of a chamber called the Second Volksraad, which is elected on a more liberal basis than the First Volksraad, persons who have resided in the country for two years, have taken an oath of allegiance and have complied with divers other requirements, being admissible as voters. This assembly, however, enjoys little real power, for its competency is confined to some specified matters, and to such others as the First Volksraad may refer to it; and its acts may be overruled by the First Raad, whereas the Second Raad has no power of passing upon the resolutions or laws enacted by the First Raad. The Second Volksraad is, therefore, not a second chamber in the ordinary sense of the term, such as the Senate in American States or the House of Lords in England, but an appendage to the old popular House. It was never intended to exercise much power, and was, in fact, nothing more than a concession, more apparent than real, to the demands of the Uitlanders, or recent immigrants excluded from citizenship.

A few general observations may be made on this Constitution before we proceed to examine its legal character and effect.

It was in its older form a crude, untechnical document, showing little trace on the part of those who drafted it either of legal skill or of a knowledge of other constitutions. The language was often vague, and many of the provisions went into details ill-fitted for a fundamental law.

Although enacted by and for a pure democracy, it was based on inequality—inequality of whites and blacks, inequality of religious creeds. Not only was the Dutch Reformed Church declared to be established and endowed by the State, but Roman Catholic churches were forbidden to exist, and no Roman Catholic nor Jew nor Protestant of any other than the Dutch Reformed Church was eligible to the presidency, or to membership of the legislature or executive council. In its improved

shape (1889) some of these faults have been corrected, and in particular the religious restrictions were reduced to a requirement that the President, the Secretary of State, the Landrosts and the members of the Volksraad should belong to a Protestant Church. The door, however, remained barred against persons of colour.

It contained and still contains little in the nature of a Bill of Rights, partly perhaps from an oversight on the part of its draftsmen, but partly also owing to the assumption—which the early history of the republic amply verified—that the government would be a weak one, unable to encroach upon the rights of private citizens.

The first legal question which arises upon an examination of this Constitution relates to its stability and permanence. Is it a Rigid or a Flexible Constitution? That is to say, can it, like the constitution of the Orange Free State and that of the United States, be altered only in some specially prescribed fashion? Or may it be altered by the ordinary legislature in the ordinary way, like any other part of the law?

In favour of the former alternative, that the constitution is a Rigid one, appeal has been made not only to the name *Grondwet* (Ground-law), but, which is of more consequence, to some of its language. The general declarations of the power of the people, the form in which they entrust power to the legislature, to the Executive Council, and to the judiciary respectively (as well as to the military authority), look as if meant to constitute a triad of authorities, similar to that created by the constitutions of American States, no one of which authorities may trespass on the province of the others. Some things seem intended to be secured against any alteration by the legislature, e. g., article 9 declares that 'the people will not allow of any equality between coloured and white inhabitants'; article 11 declares that 'the people reserve to themselves the exclusive right of protecting and defending the independence and

inviolability of Church and State, according to the laws.'

On the other hand, it is argued that the constitution must be deemed to be a Flexible one, because it did not in its original form, and does not now, contain any provision whereby it may be altered, otherwise than by the regular legislature of the country acting according to its ordinary legislative methods. One cannot suppose that no change was intended ever to be made in the Grondwet. That supposition would be absurd in view of the very minute provisions on some trivial subjects which it contains. No distinction is drawn, by the terms of the instrument, between these minutiae and the provisions of a more general and apparently permanent nature. *Ergo*, all must be alterable, and alterable by the only legislative authority, that is to say, the Volksraad. This view, moreover, is the view which the legislature has in fact taken, and in which the people have certainly acquiesced. Some changes have been made—such as the admission to the electoral franchise of persons not belonging to the Dutch Reformed Church, the creation of a new supreme court, and the establishment of a Second Volksraad—which are not consistent with the Grondwet, but whose validity has not been contested.

The difficulty which arises from the fact that, whereas the framers of the Grondwet appear to have desired to make parts of their work fundamental and unchangeable, they have nevertheless drawn no distinction between those parts and the rest, and have provided no specific security against the heedless change of the weightiest parts, may be explained by noting that they were not skilled jurists or politicians, alive to the delicacy of the task they had undertaken. They expected that the Volksraad would continue to be of the same mind as they were then, and would respect what they considered fundamental; they relied on the general opinion of the nation. They had, moreover, provided a method whereby the nation should always have an opportunity

of expressing its opinion upon legislation, namely, the provision (§ 12) that the people should have a period of three months within which to 'intimate to the Volksraad their views on any proposed law,' it being assumed that the Volksraad would obey any such intimation, although no means is provided for securing that it will do so.

This provision has given rise to a curious question. It excepts 'those laws which admit of no delay.' Now the Volksraad has in fact neglected the general provision, and, instead of allowing the three months' period, has frequently hastily passed enactments upon which the people have had no opportunity of expressing their opinion. Such enactments, which have in some instances purported to alter parts of the Grondwet itself, are called 'resolutions' (*besluite*) as opposed to laws; and when objection has been taken to this mode of legislation, these resolutions seem to have been usually justified on the ground of urgency, although in fact many of them, if important, could hardly be called urgent. They have been treated as equally binding with laws passed in accordance with the provisions of the Grondwet (for up to 1895 article 12 seems not to have been formally altered); and it is only recently that their validity has been seriously questioned in the courts. Those who support their validity argue that in passing such resolutions as laws, the Volksraad must be taken to have implicitly, but decisively, repealed the provision of article 12; or that, if this be not so, still the Volksraad is under article 12 the sole judge of urgency, and can legally treat things as urgent which are, in fact, not so; a view affirmed by the Chief Justice in a case (*State v. Hess*) which arose in 1895. They add that even apart from both these arguments the unbroken usage of the Volksraad during a number of years, tacitly approved by the people, must be deemed to have established the true construction of the Constitution, especially as according to Roman Dutch law, usage, whether affirmative or negative, can alter written enactments and could thus annul the direc-

tions of article 12. So it is written in the Digest of Justinian (I. 3. 32): 'Inveterata consuetudo pro lege custoditur . . . nam quid interest suffragio populus voluntatem suam declaret an rebus ipsis et factis? Quare rectissime etiam illud receptum est ut leges non solum suffragio legis latoris, sed etiam tacito consensu omnium per desuetudinem abrogentur.' To this, however, it is answered that the principle of obsolescence by contrary practice cannot fitly be applied where a statute is recent and express.

Until 1897, the High Court of the Transvaal had held that the resolutions as well as the laws passed by the Volksraad were fully valid, whether or no they had been submitted to the people for the period of three months, nor had the question of their being really urgent been raised. It had thus declared the Grondwet to be alterable by the Legislature, and so not a Rigid Constitution. In that year, however, in the case of *Brown v. Leyds*, the Court held, by a majority, that a law which had been passed without having been submitted to the people during the period prescribed by the Grondwet was unconstitutional and therefore void, thus appearing to assert (for the language of the judgement is not very clear) the view that the Grondwet was a Rigid Constitution, not alterable by the Legislature. This action was warmly resented by the Executive and Legislature: and the latter passed a resolution directing the President to require from every judge on pain of dismissal a declaration that he would in future recognize as valid every law passed by the Volksraad, and not again assert the so-called 'testing power' of inquiring whether a law conformed to the provisions of the Grondwet. The Chief Justice refused to make this declaration, and was accordingly dismissed, much to the regret of those who remembered his past services to the State.

On a review of the whole matter, apart from the political passion which has been brought into it, the true view would appear to be the following, though I state

it with the diffidence becoming a stranger who is also imperfectly informed as to the constitutional history of the republic.

The Grondwet of the South African Republic, though possibly intended by its framers to be treated, in respect of its most important provisions, as a fundamental law not to be altered by the Volksraad in the exercise of its ordinary powers, is not really a Rigid constitution but a Flexible one. We have to look not so much at what the framers may have wished as at what the language employed actually conveys and imports; and the absence of any provision, such as that contained in the Constitution of the Orange Free State, for a special and peculiar method of change, is decisive upon this point. An American lawyer, accustomed to construe strictly documents which contain or modify powers, might be inclined to argue that the validity of laws (not dealing with matters which 'admit of no delay') which had been passed as mere resolutions, ignoring article 12, may have been doubtful until the Volksraad modified that article by legislation. But the Transvaal High Court had held that the question of urgency was a question for the discretion of the Volksraad; and it must be added that persons accustomed to other legal systems do not necessarily proceed upon American principles. The Swiss, for instance, make their legislature the interpreter of the Constitution for the purpose of determining the extent of legislative power¹. Allowing for this, and remembering that both the law courts and the whole people had until 1897 treated the Volksraad as an absolutely sovereign body, the action it took in asserting its sovereignty need excite no surprise. It was claiming nothing more than the powers actually enjoyed by the British Parliament. However, although the Volksraad was merely enforcing the rights which it reasonably (and I think correctly) conceived itself to possess, and could not have permitted the majority of the High Court to assert a power pre-

¹ See Essay III, p. 195.

viously unknown, a wiser course would have been to amend the Constitution in some way which would have given to the judiciary a more assured position than that which had been secured to them by a confessedly crude and imperfect instrument. It was through the confused language of the Grondwet that the whole difficulty arose, and while formally declaring that the Grondwet was not—as it certainly was not—a Rigid Constitution, the Volksraad ought to have endeavoured to render it more suited to the needs of a society which had grown to be different from that for which it had been originally enacted.

IV. OBSERVATIONS ON THE CHARACTER AND WORKING OF BOTH CONSTITUTIONS.

The principles of these Constitutions are highly democratic. They were intended so to be. Among the whites settled in these wide territories there prevailed a perfect social equality, a passionate love of independence, and a strong sense of personal dignity. They were as little influenced by political theories as it was possible for any civilized men in this century to be. Their wish for a government purely popular, and indeed for very little of any government at all, was due to their personal experience and to the conditions under which they found themselves in the wilderness; and one may doubt whether they would have established a regular government but for the dangers which threatened them from the warlike native tribes. Such sentiments as I have described would have disposed them, had they lived in a city, or in a small area like the cantons of Uri or Appenzell in Switzerland, to have kept legislation and the determination of all grave affairs in the hands of a general meeting of the citizens. But they lived scattered over a vast wilderness, with no means of communication save ox-wagons which travel only some twelve miles a day. In the Orange River Territory when

it became a state there were probably less than three thousand citizens, though its area was nearly that of England. Hence primary assemblies were impossible, and power had to be entrusted to a representative body.

The predominance of the legislature is the most conspicuous feature of both these constitutions. The Transvaal Volksraad originally made all the appointments to the civil service, for the President had only the right of proposing, and even in the revised Grondwet of 1889 the Raad retains the right of approving or disapproving the President's appointments. In both republics the Volksraad appoints a majority of the Executive Council which surrounds the President, to advise, but also to watch and check him. It has complete control of revenue and expenditure. It may change the constitution, though, in the Orange Free State, only by a prescribed majority. The President has no veto on its acts; nor is it, as in most modern free countries, divided into two chambers likely to differ from and embarrass one another. Its vote, which may, if it pleases, be a single vote, given under no restrictions but those of its own making, is decisive.

The comparative feebleness of the other branches of government corresponds to the overwhelming strength of the legislature. The authority of the judiciary received from the first a somewhat vague recognition, and its independence was at one time, in the South African Republic, seriously threatened by the executive and legislature, and saved only by the exertions of the bench and bar, which aroused public opinion on its behalf. The later controversy between the Volksraad and the Chief Justice has been already discussed. In the Free State the Court's claim to be the proper and authoritative interpreter of the constitution, which would be clear upon English or American principles, was never formally admitted. And though the judges are in both republics appointed for life, their salaries are at the mercy of the legislature.

The executive head of the government has no doubt the advantage, as in an American State, of being directly chosen by the people, and not, as in France, by the legislature. But he has no veto on acts of the legislature, while his acts can be overruled by it, at least in the Orange Free State, for in the Transvaal this may be more doubtful. Its approval is required to any appointments he may suggest. He is hampered by an Executive Council which he has not himself selected, resembling in this respect an American State governor rather than the President of the Union. It may, in the Free State, try him and depose him if convicted. He has no military authority, such as that enjoyed by the British Crown and its ministers, or by the American President, for that belongs to the Commandant-General (though in the Orange Free State the Commandant 'receives instructions' from the President).

Against all these sources of weakness there are only two things to set. The President can speak in the Volksraad, and he is re-eligible any number of times.

The Executive Council, as already observed, seems intended to restrain the President, while purporting to aid and advise him. It may be compared to the Privy Council of mediaeval England, with the important difference that it is appointed, not by the executive, but partly by the legislature, partly by the people. As we shall see presently, it has proved to be an unimportant part of the machinery of government.

In all these points the two constitutions present a close likeness. They are also similar in the recognition which they originally gave, and have not wholly ceased to give, to a state church—an institution opposed to democratic ideas in America and in the British Colonies—as well as in their exclusion of persons of colour from every kind of political right. It would appear that upon this point there has never been any substantial difference of opinion in the two republics. Neither indeed is there

much difference of opinion in the British parts of South Africa, for although the influence of English ideas has been so far felt that in Cape Colony persons of colour are permitted to vote, still the combination of a property qualification with an educational qualification greatly restricts their number. A republican form of government, therefore, does not necessarily appear to make for 'human rights' in the American sense of that term, any more than it did in the United States in 1788.

Speaking generally, these two Constitutions carry the principle of the omnipotence of the representative chamber to a maximum. This will be more clearly seen if we compare the system they create, first with the cabinet system of Britain and her self-governing colonies, and secondly with the presidential system of the United States.

The main differences between the South African scheme of government and the British may be briefly summarized.

The head of the executive is, in the South African republics, chosen directly by the people, whereas in Britain and her colonies the executive ministry is virtually chosen by the legislature¹, though nominally by the Crown or its local representative.

In these republics the executive cannot, as can ministers under the British system, be dismissed by a vote of the legislature, nor on the other hand has the executive the power of dissolving the legislature.

In these republics the nominal is also the real and acting executive head, whereas in the British system a responsible ministry is interposed between the nominal head and the legislature.

In all the above-mentioned points the South African system bears a close resemblance to the American.

¹ Using the expression which Bagehot has made familiar, though of course Parliament is far from determining the entire composition of a ministry, which may occasionally contain persons it would not have selected.

In these republics the President's Council need not consist of persons in agreement with his views of policy. It may even be hostile to him, as part of Warren Hastings's council at Calcutta was in permanent opposition to that governor. Nor does the Executive Council consist, like the (normal) British cabinet and United States Federal cabinet, of the heads of the great administrative departments, though several officials sit in it.

On the other hand, the South African system agrees with the British in permitting the head of the working executive to speak in the legislature, a permission which has proved to be of the highest importance, and which in America is given by usage neither to the Federal President¹ nor to a State governor.

The chief differences between the South African and the American system are the following:—

The President has, in the South African republics, far less independence than belongs in the United States to either a Federal President or to the Governor of a State. He has no veto on acts of the legislature, and less indirect power through the patronage at his disposal. Moreover, the one-chambered legislature is much stronger as against him than are the two-chambered legislatures of America, which may, and frequently do, differ in opinion, so that the President or Governor can play off one against the other. Further, as already observed, an American Federal President has a cabinet of advisers whom he has himself selected, and an American State governor has usually officials around him who, being elected by a party vote at the same election, are probably his political allies; whereas a South African President might possibly have an Executive Council of opponents forced on him by the Volksraad. And even in negotiations with foreign states, he cannot act apart from this Executive Council.

The distinctive note of both these South African Con-

¹ Although there is nothing in the federal constitution to prevent a President from addressing either House of Congress.

stitutions is the kind of relation they create between the Executive and the Legislature. These powers are not disjoined, as in the United States, because a South African President habitually addresses and may even lead the Volksraad. Neither are they united, as in Britain and her colonies, where the Executive is at the same time dependent on the legislature, and also the leader of the legislature, for the South African President is elected by the people for a fixed term, and cannot be displaced by the Volksraad. He combines the independence of an American President with the opportunities of influencing the legislature enjoyed by a British, or British colonial, Ministry. For nearly all practical purposes he is at the mercy of the legislature, because he has neither a veto, like the American President, nor a power of dissolution, like the British Ministry. The Volksraad could take all real power from him, should it be so minded. But he is strong by the possession of the two advantages just mentioned. He can persuade his Volksraad, which has not, by forming itself into organized parties, become inaccessible to persuasion. He can influence the opinion of his people, because he is their choice, and a single man in a high place fixes the attention and leads the minds of a people more than does an assembly.

It must, however, be remembered that the features—perhaps one may say the merits—which I have noted as shown in the working of the South African system, belong rather to small than to large communities. The Free State had in 1895 only some seventeen thousand voting citizens, the Transvaal not many more. Athens in the days of Themistocles had about thirty thousand. In large countries, with large Legislatures, whose size would engender political parties, things would work out differently. Furthermore, in a large State, the administrative departments would be numerous and their work heavy. The President could not discuss departmental affairs with the Raad, and could not easily be made personally responsible for all that his administrative officers

did. And the less knowledge he had of affairs and of persons, the less influence he exerted over the Raad, the more would his Executive Council tend to check him. Its members would probably intrigue with the leaders of parties in the Volksraad, and make themselves a more important factor in the government than they have been while overshadowed by his personality.

Any one who, knowing little or nothing about the social conditions and the history of these two republics, should try to predict the working of their governments from a perusal of their constitutions, would expect to find them producing a supremacy, perhaps a tyranny, of the representative assembly; for few checks upon its power are to be found within the four corners of either instrument. He would be prepared to see party government develop itself in a pronounced form. Power would be concentrated in the party majority and its leaders. The Executive would become the humble instrument of their will. The courts of law, especially in the Transvaal with its Flexible constitution, would be unable to stem the tide of legislative violence. The President might perhaps attempt to resist by producing a deadlock over appointments; and he would have a certain moral advantage in being the direct choice of the people. But the one-chambered Legislature would in all probability prevail against him.

Is this what has in fact happened? Far from it. Party government, in the English and American sense, has not made its appearance. The Legislature has not become the predominant power, subjecting all others to itself. It has, in general, followed the lead of the Executive. The Courts of law, though (in the Transvaal) at one moment menaced, have administered justice with fairness and independence. But in order to describe what has happened, I must, in a very few sentences, deal separately with the Orange Free State and the South African Republic, for though their constitutions are similar and the origin of their respective popu-

lations nearly identical¹, their history has been very different.

The Orange Free State had, for many years prior to 1899, a comparatively tranquil and uneventful career. One native war inflicted some injury upon it, but the result of that war was to give it a strip of valuable territory. It had joined the British colonies in a South African Customs Union, had placed its railroads under the management of the Cape Government, had maintained friendly relations with the two British self-governing colonies, had extended the franchise to immigrants on easy terms, and was at all times recognized as absolutely independent by the British Government. Internally its development, if not rapid, was both steady and healthful. There was no poverty among the people, and hardly any wealth. No exciting questions arose to divide the citizens, and no political parties grew up. The Legislature, although too large, has been a sensible, business-like body, which wasted no more time than debate necessarily implies. From 1863 to 1888 it was guided by the counsels of President Brand, whom the people elected for five successive terms, and whose power of sitting in it and addressing it proved of the utmost value, for his judgement and patriotism inspired perfect confidence. His successor Mr. Reitz, who was obliged by ill-health to retire from office in 1895, enjoyed equal respect and almost equal influence, when he chose to exert it, with the Volksraad, and things went smoothly under him, as they promised to do under President Steyn, who was elected in 1896, for the latter also was believed—so I heard when visiting the Free State in 1895—to possess the qualities which had endeared his predecessors to the community. The Executive Council has not proved to be a very valuable part of the scheme of government; and some judicious observers thought the constitution ought to be amended by strengthening

¹ The British element is larger among the citizens of the Orange Free State than it is in the burgher population of the Transvaal.

the position of the courts and introducing provisions for a popular vote on constitutional amendments, similar to those which exist in American States and in Switzerland. But, on the whole, the system of government worked smoothly, purely and efficiently; the Legislature was above suspicion, and the people were content with their institutions.

Very different had been the annals of the South African Republic. Soon after the Grondwet was adopted in 1858, a civil war broke out; and from that time onward factions and troubles of all kinds were seldom wanting. In 1877 the country, then threatened by native enemies, was annexed to the British dominions against the will of the people: in 1881 its autonomy was restored, subject to British suzerainty¹. Its government, however, continued to be pressed by financial and other difficulties, till the discovery of rich gold-fields in 1884-6, while suddenly increasing the revenue, drew in a stream of immigrants which has steadily continued to flow, and therewith raised that new crop of political troubles of which all the world has heard². The result has been that the Constitution has never had any period of comparative peace in which its working could be fairly tested. If it has not worked as smoothly as that of the Free State, this may be due not merely to inherent defects but to the strain which civil and foreign wars have placed upon it. The Legislature, however, has not played the leading part. President Burgers, who held

¹ A further convention was made in 1884, whose articles, omitting all reference to 'suzerainty' conceded an independence qualified only in respect of the veto retained by Britain over treaties with foreign powers.

² When these immigrants from all parts of the world swarmed into the country, admission to the franchise was made more difficult, because the conservative section of the citizens naturally feared that the newcomers, many of whom did not intend to make the country their home, might, if they forthwith acquired voting power, soon secure a majority and overturn the existing system of the republic, including the official use of the Dutch language and the relations of Church and State. These non-burgher immigrants have been absurdly described as 'helots.' A closer parallel to them is to be found not in the semi-serfs of Sparta but in the class of resident aliens known at Athens as metics (*μέτροικοι*). But they were indeed far better off than that class, since they enjoyed full civic rights in all matters of private law, wanting only the right of sharing in the government.

office from 1872 till 1877, was, like President M. W. Pretorius before him, practically more powerful than the Volksraad; and since 1881 President Kruger, who has been thrice re-elected, has been the ruling force in the politics of the country. By his influence over the people, by his constant presence and speeches in the Volksraad, he threw its leaders entirely into the shade, and probably exerted more actual power than the chief magistrate of any other republic, though there was scarcely any other chief magistrate whose legal authority was confined within such narrow limits. So much may foreign troubles or economic and social facts, and so much do the qualities of individual men, affect and modify and prevail over the formal rules and constitutional machinery of government. The Legislature therefore has not had in the Transvaal that career of encroachment upon and triumph over the other authorities in the State which might have been predicted for it. Its turn might have come when external relations were tranquil and domestic controversies arose. When foreign affairs occupy men's minds and call for rapid decision as well as for continuity of policy, the Legislature is apt to be, in all countries, dwarfed by the Executive.

POSTSCRIPT.

Since the foregoing sketch of these remarkable experiments in the construction of Frames of Government was written (in 1896), both the Dutch republics have become involved in a deplorable war with England, which has lasted for many months, and still continues at the time of this writing. It has brought misery and desolation upon South Africa, and not least upon that singularly happy, prosperous, peaceful and well-governed community, the Orange Free State. While the flames are still raging, no one can conjecture in what form these two constitutions will emerge from the furnace, or whether indeed they will survive at all. In the midst

of so terrible a catastrophe, a catastrophe unredeemed by any prospect of benefit to any of the combatants, and one whose results must be fateful in many ways for the future of South Africa, and possibly also of Britain, the destruction or transformation of constitutions seems but a small matter. But had these two republics been suffered to continue the normal course of their constitutional development, that development would have been full of interest. It might even have conveyed valuable instruction or suggested useful examples to other small commonwealths, for in the scheme of these Constitutions, and especially in that of the Free State, there are some merits not to be found either in the American or in the British system. These simple Free State farmers were wiser in their simplicity than some of the philosophers who have at divers times planned frames of government for nascent communities. But though Wisdom is justified of all her children, she cannot secure that her children shall survive the shock of arms.

VIII

THE CONSTITUTION OF THE COMMONWEALTH OF AUSTRALIA

I. INTRODUCTORY.

AUSTRALIA is the first instance in history of a whole continent whose inhabitants are all (if we exclude the vanishing aborigines) of one race and all owe one allegiance. Thus it has supplied the only instance in which a political constitution has been, or could have been, framed for a whole continent. It is moreover one of the very few cases in history in which a number of communities politically unconnected (save by their common allegiance to a distant Crown) who had felt themselves to be practically a nation have suddenly transformed themselves into a National State, formally recognizing their unity and expressing it in the national institutions which they proceeded to create. There could hardly be a more striking illustration of the speed with which events have been moving during the last and the present age than the fact that Australia, or New Holland as it was then called, was, except as to part of its coasts, marked as a *Terra Incognita* upon our maps so late as the beginning of the eighteenth century, that the first British settlement was not planted in it at Sydney (not far from Captain Cook's Botany Bay) till 1788, that responsible government was not conferred upon the oldest

colony, New South Wales, until 1855, nor upon West Australia till 1890.

Besides the interest with which every one must see the birth of a new nation, occupying a vast and rich territory, the student of political science finds further matter for inquiry and reflection in the enactment of an elaborate constitution for the Commonwealth of Australia. Every creation of a new scheme of government is a precious addition to the political resources of mankind. It represents a survey and scrutiny of the constitutional experience of the past. It embodies an experiment full of instruction for the future. The statesmen of the Convention which framed this latest addition to the world's stock of Instruments of Government had passed in review all previous experiments, had found in them examples to follow and other examples to shun, had drawn from them the best essence of the teachings they were fitted to impart. When the Convention prepared its highly finished scheme of polity, it delivered its judgement upon the work of all who had gone before, while contributing to the materials which will be available for all who come hereafter to the work of building up a State.

Nearly all the precedents which the Australian Convention had at its disposal belong to very recent times, in fact to the last century and a half. Though federal governments are ancient—the oldest apparently is that formed by the cities of Lycia in the fourth century B.C.—the ancient federations scarcely got beyond the form of leagues of small republics for the purpose of common military defence. Such leagues never quite grew into Federal States, properly so called, *i.e.* States in which the central government exercises direct power over the citizens of the component communities. The same remark applies to the confederacies of the Middle Ages, such as that of the Hanse Towns and that of the old Swiss Cantons, as well as to the United Provinces of the Netherlands. The first true Federal State founded

on a complete and scientific basis was the United States, which dates from 1788, when its present Constitution was substituted for the Articles of Confederation of 1776. Next came the Constitution of the Swiss Confederation, enacted in 1848, and replacing a much looser form of union which had previously joined the Cantons of Switzerland. Its present amended form dates from 1874. The third was the Constitution of Canada, established by the British North America Act of 1867. Still later came the Constitution of the North German Confederation (1866) enlarged into that of the new Germanic Empire (1871), a remarkable Federal State with a monarch for its head, and including as its members both large kingdoms, such as Bavaria and Würtemberg, and the city republics of Lübeck, Bremen, and Hamburg¹. But this last-named Federation, instructive as it is, deals with conditions too dissimilar from those of Australia to furnish many precedents in point. It was the Constitutions of the United States and of Canada which the Australians studied most carefully, and whence they drew as well inspiration as many useful suggestions. And the student who examines the Australian scheme will find it interesting to note many points that recall, by way either of likeness or of contrast, the systems of the United States, of Switzerland, and of Canada. It is only with these three that I propose to compare the Australian Constitution in the pages that follow. As I am writing not for lawyers but for students of history and of constitutions, who desire to understand the nature of this new Government sufficiently to follow with intelligence the course of political life under it, I shall pass lightly over its more technical and more purely legal aspects, and dwell rather upon those general features which will give to the future Australian polity its character and spirit.

¹ One might add the Constitution of the Austro-Hungarian Monarchy, which is a sort of double federation. But it is too peculiar to serve as an example to other peoples proposing to federalize.

II. THE MOVEMENT FOR FEDERATION.

Like the settlements of Britain in North America, the Australian settlements were organized as Colonies at different dates, and several of them independently of the others¹. So, again like those of North America, each remained legally unconnected with the others, except through the allegiance they all owed to the British Crown, which sent out Governors to administer them. These officers were at first practically despotic; but when self-government was conferred upon a Colony, they became the nominal heads of an executive which in fact consisted of ministers responsible to the elective legislature of that Colony.

Little as there was in the way of official connexion between the scattered settlements, their inhabitants always deemed themselves Australians, giving their sentimental attachment rather to the country as a whole than to their respective colonies. They were all English; they all lived under similar conditions: their local life had not lasted long enough to form local traditions with which sentiment could entwine itself. The very names of some of the colonies did not favour individualization, for who would call himself a Newsouthwalesian? And the idea that the colonies ought to be united into one political body emerged very early. As far back as 1849 a Committee in England had recommended that there should be a Governor-General for all Australia, with power to convene a General Assembly to legislate on matters of common colonial interest, and a bill introduced into Parliament in that year contained clauses for establishing such a legislature. These provisions were dropped, for the time was not ripe, yet the idea continued to occupy the minds of Australian statesmen from that

¹ New South Wales in 1788, Tasmania in 1825, Western Australia in 1829, South Australia in 1836, Victoria in 1851, Queensland in 1859. Victoria and Queensland had however been originally settled (1836 and 1826), and for some time administered, from New South Wales, while Tasmania had been made a penal settlement as early as 1804.

year onwards; and it received a certain impulse from the creation of the Canadian Confederation in 1867. What it wanted was motive power, that is to say, a sense of actual evils or dangers to be averted, of actual benefits to be secured, by the union of the Colonies into one National State. Democratic communities, occupied by their own party controversies, are little disposed to deal with questions which are not urgent, and which hold out no definite promise either of benefit to the masses or of political gain to the leaders. However, in 1883 events occurred which evoked a new Pan-Australian feeling, and indicated objects fit to be secured by a united Australian government. The late Lord Derby, then Secretary of State for the Colonies, was the most cautious and unsentimental of mankind. He belonged to the old school of English statesmen who deprecated—and in some cases wisely deprecated—further additions to the territories and responsibilities of Britain. Disregarding the representations of the Governments of several among the Colonies, he neglected to occupy the northern part of the great neighbouring island of New Guinea which Australian opinion desired to see British, and permitted it, to their great vexation, to be taken by Germany. About the same time the escape of convicts into Australia from the French penal settlement in New Caledonia had caused annoyance, and movements were soon afterwards made by France which seemed to indicate an intention to appropriate the New Hebrides group of islands. These occurrences roused the Australians to desire an authority which might deliver their common wishes to the Home Government and take any other steps necessary for guarding their common interests. Accordingly a conference of delegates from all the Colonies, including New Zealand and Fiji, met in 1884, and prepared a scheme which was transmitted to England, and was there forthwith enacted by the Imperial Parliament under the name of The Federal Council of Australasia Act, 1885. This scheme was, how-

ever, (as I observed when it was under discussion in the House of Commons) a very scanty, fragmentary and imperfect sketch of a Federal Constitution. It had no executive power and no command of money. No colony need join unless it pleased, and each might withdraw when it pleased. Thus it befell that the plan excited little popular interest, and gave such faint promise of energetic action that only four colonies, Victoria, Queensland, Tasmania, and South Australia, entered into it; and of these South Australia presently withdrew. Meanwhile the need for some general military organization for all the Colonies began to be felt; and further objects attainable by union floated before men's minds. With the increase of trade and industry, the vexation of tariff barriers between the colonies grew daily less tolerable. Subjects emerged on which uniformity of legislation was felt to be needful. The irrigation question, one of great importance for so arid a country, brings New South Wales, where some of the large rivers have their source, into close relation with Victoria and South Australia, and requires to be treated on common lines. These and other grounds led to an Inter-Colonial Conference of Ministers at Melbourne in 1890, and then to the summoning of a Convention of Delegates from the Parliaments of all the Colonies, including Tasmania. This latter body, which included many leading men, met at Sydney in 1891, debated the matter with great ability, and produced a Draft Bill, which became the basis of all subsequent discussions. The movement, hitherto confined to a group of political leaders, now began to be taken up by the people, and became, especially when the financial troubles of 1893 had begun to pass away, the principal subject in men's minds. That crisis had shown all the Colonies how closely their interests were bound together, and had made them desire to remove every hindrance to an industrial and financial recovery. A Conference of Prime Ministers at Hobart in 1895 led to the passing by the several Co-

lonial Parliaments of enabling Acts under which delegates were chosen, this time (following recent American precedents) by popular vote, to a new Convention which met at Adelaide (in South Australia) in 1897. It produced a second draft constitution, based on that of 1891, and laid it before the legislatures of the Colonies for criticism. About seventy-five amendments were proposed, and were considered by the Convention at its further sittings, which closed in March, 1898. The draft Constitution was then submitted to a popular vote, a new expedient in the British dominions, but one amply justified by the need for associating the people with the work. New South Wales alone failed to adopt it by the prescribed majority, because a large section of her inhabitants thought that her interests had not been duly regarded, but after a few amendments had been inserted at a conference of the Colonial Prime Ministers, her people ratified it upon a second vote. On this vote enormous majorities were secured in Victoria, South Australia and Tasmania, smaller ones in New South Wales and Queensland. The Constitution was then sent to England and passed into law by the Parliament of the United Kingdom under the title of The Commonwealth of Australia Constitution Act (63 & 64 Vict. cap. 12). Action by the Imperial Parliament was not only a convenient way of overriding all the colonial constitutions by one comprehensive Act, but was legally necessary, inasmuch as some provisions of the Constitution transcended the powers of all the colonial legislatures taken together. Since it had from the first been understood that the wish of the mother country was not to impose her own views but simply to carry out the wishes of the Colonies, only one slight alteration, an alteration rather of form than substance, was made in the draft as transmitted from Australia, the ill-considered notion of introducing a larger change having been eventually dropped by the British Ministry.

I have mentioned these details in order to emphasize

the time, care and pains bestowed by the Australians—for the work was entirely their own—upon this latest effort of constructive statesmanship. The Constitution of the United States was framed by a Convention which sat at Philadelphia, with closed doors, for nearly five months, and was accepted by Conventions in all the thirteen States without change, though ten amendments were immediately thereafter passed by general consent, their adoption having been the price paid for the ratification of the main instrument by some doubtful States.

The Constitution of Canada took a little more than two years to settle. The Resolutions on which it was based were first of all drafted by a conference of delegates at Quebec. These were approved after full debate by the legislatures of the Provinces, and were, after some modifications, embodied in a Bill prepared by a small conference of Canadian statesmen who met in London. The Bill was then passed by the Imperial Parliament, never having been submitted to any popular vote. But this Australian instrument is the fruit of debates in two Conventions, of a minute examination by legislatures, of a subsequent revision by the second Convention, of further modifications in a few details by a conference of Prime Ministers, and has after all this preparation been sealed by the approval of the peoples of the Colonies concerned. The process of incubation lasted for nearly nine years, being all the while conducted in the full blaze of newspaper reporting and under the constant oversight of public opinion.

III. THE CAUSES WHICH BROUGHT ABOUT FEDERATION.

The reasons and grounds assigned by the advocates of Federation were more numerous than those urged in the United States in 1787-9, or in Canada in 1864-6; but none of them were so imperative, for the Australian Colonies were far less seriously menaced by actually insistent evils, due to the want of a common national

Government, than was the welfare either of the American States in 1787, or of Switzerland in 1848, or of Canada in 1867. In North America, it was the growing and indeed hopeless weakness and poverty of the existing Confederation, coupled with the barriers to commercial intercourse, the confusion and depreciation of currency, and the financial demoralization of some of the States, all of which had just emerged from an exhausting war, that drew the wisest minds of the nation to Philadelphia, induced them to persist in efforts to devise a better union, and enabled them to force its acceptance upon a people largely reluctant. In Switzerland it was the War of Secession (the so-called Sonderbund war) of 1847 that compelled the victorious party to substitute a new and truly federal constitution for the league which had proved too weak. In Canada the relations of the French-speaking and English-speaking Provinces (Lower and Upper Canada) had become so awkward that constitutional government was being practically brought to a standstill, and nothing remained but that the leaders of the two parties should devise some new system. Australia was in no such straits. Her colonies might have continued to go on and prosper, as six unconnected self-governing communities. It is therefore all the more to the credit of her people that they forwent the pleasures of local independence which are so dear to vivacious democracies, perceiving that although necessity might not dictate a federal union, reason recommended it.

The grounds which were used in argument to urge the adoption of the Federal Constitution may be summed up as follows:—

The gain to trade and the general convenience to be expected from abolishing the tariffs established on the frontiers of each colony.

The need for a common system of military defence.

The advantages of a common legislation for the regulation of railways and the fixing of railway rates.

The advantages of a common control of the larger rivers for the purposes both of navigation and of irrigation.

The need for uniform legislation on a number of commercial and industrial topics.

The importance of finding an authority competent to provide for old-age pensions and for the settlement of labour disputes all over the country.

The need for uniform provisions against the entrance of coloured races (especially Chinese, Malays, and Indian coolies).

The gain to suitors from the establishment of a High Court to entertain appeals and avoid the expense and delay involved in carrying cases to the Privy Council in England.

The probability that money could be borrowed more easily on the credit of an Australian Federation than by each colony for itself.

The stimulus to be given to industry and trade by substituting one great community for six smaller ones.

The possibility of making better arrangements for the disposal of the unappropriated lands belonging to some of the colonies than could be made by those colonies for themselves.

There was in these arguments something to move every class in the community. To the commercial classes, the prospect of getting rid of custom-houses and of finding a large free market close at hand for all products was attractive; as was also that of sweeping away the vexation of railway rates planned in the interests of each colony rather than for the common benefit of trade. Large-minded men, thinkers as well as statesmen, hoped that a wider field would bring a loftier spirit into public life. The working-classes might expect, not only advantages in the way of brisker employment, but the establishment of that provision for old age and sickness which a Government covering the whole country and commanding ample resources could make more effi-

ciently and on more uniform lines than even the richest colony could do. Some of these grounds for union measure the distance which the world has travelled since 1788. Railways are far older than was self-government in the oldest Australian colony, far younger than the youngest of the original thirteen American States. Even so late as 1867, when Canada was confederated, no one thought of suggesting that the State should provide old-age pensions.

The opponents of Australian Federation, although they came more and more to feel their cause hopeless, were an active party, including many influential men. Besides denying that the benefits just enumerated would be attained, they dwelt upon the additional cost which a new Government, superadded to the existing ones, must entail. They fanned the jealousies which naturally exist between small and large communities, telling the former that they would be overborne in voting, and the latter that they would suffer in purse; and they wound up with the usual and often legitimate appeals to local sentiment.

The arguments drawn from considerations of expense and from local jealousies were met by a series of ingenious compromises and financial devices to which both the larger and smaller colonies were persuaded to agree, while the love of each community for its own political independence was overborne by the rising tide of national sentiment. An ambition which aspired to make Australia take its place in the world as a great nation, mistress of the Southern hemisphere, had been growing for some time with the growth of a new generation born in the new home, and was powerfully roused by the vision of a Federal Government which should resemble that of the United States and warn off intruders in the Western Pacific, as the American Republic had announced by the pen of President Monroe that she would do on the North-American Continent. The same nationally self-assertive spirit and desire for expansion which has recently spurred four great European Powers

into a rivalry for new colonial possessions, and which in 1899 made the United States forswear its old-established principles of policy, has been astir in the mind of the Australians. It had been stimulated by the example of a similar spirit in the mother country, and by the compliments which the English had now begun to lavish upon their colonies. It had gained strength with the growth to manhood of a generation born in Australia, and nurtured in Australian patriotism. Such a patriotism, finding no fit scope in devotion to the particular colonies, longed for a larger ideal. It supplied the motive force needed to create a national union. Without it, all the sober reasonings which counselled confederation might have failed to prevail. No equally strenuous or forward-reaching spirit moved the Canadians in 1867, nor are the traces of such a spirit conspicuous in the American debates of 1787-9. Some men were then solicitous for liberty, others for order and good government, but of imperial greatness in the present sense of the term little was said. Liberty and peace at home, not military strength and domination abroad, were the national ideals of those days.

The history of the Federation movement illustrates the truth that a great change is seldom effected in politics save by the coincidence of two moving forces—the prospect of material advantage and the power of sentiment. In every community there are many who can be moved only by one or other of these two forces, and nearly every man responds better to the first if he can be warmed by the second. In the American debates of 1788-9 feeling was mostly arrayed against the proposed federation, though reason was almost entirely for it. Reason prevailed, but prevailed with far more difficulty than the cause of Federalism, with less cogent economic grounds behind it, prevailed in Australia.

Like America in 1787, Australia was fortunate in having a group of able statesmen, most of whom were also lawyers, and so doubly qualified for the task of prepar-

ing a constitution. Their learning, their acuteness, and their mastery of constitutional principles can best be appreciated by any one who will peruse the interesting debates in the two Conventions. They used the experience of the mother country and of their predecessors in the work of federation-making, but they did so in no slavish spirit, choosing from the doctrines of England and from the rules of America, Switzerland, and Canada those which seemed best fitted to the special conditions of their own country. And like the founders of the American and Canadian Unions, they were not only guided by a clear practical sense, but were animated by a spirit of reasonable compromise, a spirit which promises well for the conduct of government under the instrument which they have framed.

IV. THE CONDITIONS FOR A FEDERAL COMMONWEALTH.

Before examining the provisions of the Constitution which is bringing the hitherto independent colonies into one political body, it is well to consider for a moment the territory and the inhabitants that are to be thus united.

The total area of Australia is nearly 3,000,000 square miles, not much less than that of Europe. Of this a comparatively small part is peopled by white men, for the interior, as well as vast tracts stretching inland from the south-western and north-western coasts, is almost rainless, and supplies, even in its better districts, nothing more than a scanty growth of shrubs. Much of it is lower than the regions towards the coast, and parts are but little above sea-level. It has been hitherto deemed incapable of supporting human settlement, and unfit even for such ranching as is practised on arid tracts in western North America and in South Africa. Modern science has brought so many unexpected things to pass, that this conclusion may prove to have been

too hasty. Still no growth of population in the interior can be looked for corresponding to that which marked the development of the United States west of the Alleghanies in the beginning of the nineteenth century.

Of the six Australian colonies, one, Tasmania, occupies an island of its own, fertile and beautiful, but rather smaller (26,000 square miles) than Scotland or South Carolina. It lies 150 miles from the coast of Victoria. Western Australia covers an enormous area (nearly 1,000,000 square miles, between three and four times the size of Texas), and South Australia, which stretches right across the Continent to the Gulf of Carpentaria, is almost as large (a little over 900,000 square miles). Queensland is smaller, with 668,000 square miles; New South Wales, on the other hand, has only 310,000 square miles (*i.e.* is rather larger than Sweden and Norway and about the size of California, Oregon and Washington put together); Victoria only 87,000 (*i.e.* is as large as Great Britain and a little larger than Idaho). The country (including Tasmania) stretches from north to south over 32° of latitude (11° S. to 43° S.), a wider range than that of the United States (lat. 49° N. to 26° N.). There are thus even greater contrasts of climate than in the last-named country, for though the Tasmanian winters are less cold than those of Montana, the tropical heats of North Queensland and the shores of the Gulf of Carpentaria exceed any temperature reached in Louisiana and Texas. Fortunately, Northern Australia is, for its latitude, comparatively free from malarial fevers. But it is too hot for the out-door labour of white men. In these marked physical differences between the extremities of the Continent there lie sources whence may spring divergences not only of material interests but ultimately even of character, divergences comparable to those which made the Gulf States of the American Union find themselves drawn apart from the States of the North Atlantic and Great Lakes.

It must also be noted that the great central wilderness

cuts off not only the tropical north and north-west, but also the more temperate parts of the west from the thickly peopled regions of the south-west. Western Australia communicates with her Eastern sisters only by a long sea voyage¹. She is almost in the position held by California when, before the making of the first transcontinental railway, people went from New York to San Francisco via Panama. Nor is there much prospect that settlements will arise here and there in the intervening desert.

The population of the Continent, which has now reached nearly 4,000,000, is very unequally distributed. The three colonies of widest area, Western Australia, South Australia, and Queensland, have none of them 500,000 inhabitants. Tasmania has about 170,000. Two others, New South Wales and Victoria, have each more than 1,000,000². This disparity ranges them for political purposes into two groups, the large ones with 2,500,000 people in two colonies, and the small ones with 1,500,000 in four colonies.

Against these two sets of differences, physical and social, which might be expected to induce an opposition of economic and political interests, there is to be placed the fact that the Australian colonies are singularly homogeneous in population. British North America is peopled by a French as well as by an English race, British South Africa by a Dutch race as well as an English. But Australia is purely British. Even the Irish and the Scotch, though both races are specially prone to emigrate, seem less conspicuous than they are in Canada³. Australia is to-day almost as purely English as Massachusetts, Connecticut, and Virginia were in 1776,

¹ It is four days' voyage from Adelaide, the capital of S. Australia, to Perth, the capital of W. Australia.

² Two-fifths of the population of Victoria live in Melbourne, one-fourth of the population of New South Wales in Sydney.

³ In 1891, out of that part of the total population of Australia which had been born in the United Kingdom, about one-fourth had been born in Ireland and one-sixth in Scotland. Of the whole population of Australia, 95 per cent. are of British stock.

and probably more English than were the thirteen original States taken as a whole. In this fact the colonies found not only an inducement to a closer union, but a security against the occurrence of one of the dangers which most frequently threatens the internal concord of a federation. Race antagonisms have troubled not only Canada and South Africa but the United Kingdom itself, and they now constitute the gravest of the perils that surround the Austro-Hungarian monarchy.

Among the other favouring conditions may be enumerated the use of one language only (whereas in Canada and in South Africa two are spoken), the existence of one system of law, the experience of the same form of political institutions, a form modelled on that which the venerable traditions of the mother country have endeared to Englishmen in all parts of the world. It has also been a piece of good fortune that religion has not interposed any grounds for jealousy or division. The population of Australia is divided among various Christian denominations very much as the population of England is, and the chief difference between the old and the new country lies in the greater friendliness to one another of various communions which exists in the new country, a happy result due partly to the absence of any State Establishment of religion, and partly to that sense of social equality which is strong enough to condemn any attempt on the part of one religious body to claim social superiority over the others.

Finally, there is the unique position which Australia occupies. She has a perfect natural frontier, because she is surrounded by the sea, an island continent, so far removed from all other civilized nations that she is not likely to be either threatened by their attacks or entangled in their alliances. The United States had, when its career began, British possessions on the north, French and Spanish on the south. But the tropical islands which Holland, Germany and France claim as theirs to the north and east of the Australian coasts are

cut off by a wide stretch of ocean¹. They are not now, and are not likely at any time we can foresee, to contain a white population capable of disturbing the repose of Australia. Such a country seems made for one nation, though the fact that its settled regions lie scattered round a vast central wilderness suggests that it is better fitted for a federation than for a government of the unified type. But, on the other hand, this very remoteness might, in removing the force of external pressure, have weakened the sense of need for a federal union had there not existed that homogeneity of race and that aspiring national sentiment to which I have adverted.

Compare these conditions with those of the three other Federations. The thirteen colonies which have grown into the present forty-five States of the American Union lay, continuous with one another, along the coast of the Atlantic. England held Canada to the north of them, France held the Mississippi Valley to the west of them, and, still further to the west, Spain held the coasts of the Pacific. They had at that time no natural boundaries on land; and the forces that drew them together were local contiguity, race unity, and above all, the sense that they must combine to protect themselves against powerful neighbours as well as against the evils which had become so painfully evident in the governments of the several States. Nature prescribed union, though few dreamt that Nature meant that union to cover the whole central belt of a Continent. In the case of Canada, Nature spoke with a more doubtful voice. She might rather have appeared to suggest that this long and narrow strip of habitable but only partially inhabited land, stretching from the Gulf of St. Lawrence to Puget Sound, should either all of it unite with its mighty neighbour to the south, or should form three or four separate groups, separated by intervening wildernesses. Political feelings however, compounded of attachment to Britain and a proud resolve not to be merged in a rival

¹ The nearest point of Dutch New Guinea is about 150 miles from Australia.

power which had done nothing to conciliate them, led the Canadians to form a confederation of their own, which Nature has blessed in this point at least, that its territories are so similar in climate and in conditions for industrial growth that few economic antagonisms seem likely to arise among them. Switzerland, however, is the most remarkable case of a Federation formed by historical causes in the very teeth, as it might seem, of ethnological obstacles. Three races, speaking three languages, have been so squeezed together by formidable neighbours as to have grown into one. The help of Nature has however been given in providing them with mountain fastnesses from which the armies of those neighbours could be resisted; and the physical character of the country has joined with the traditions of a splendid warlike heroism in creating a patriotism perhaps more intense than any other in the modern world.

V. THE CONSTITUTION AS A FEDERAL INSTRUMENT.

In examining any Federal Constitution, it is convenient to consider the system it creates first as a Federation, *i.e.* a contrivance for holding minor communities together in a greater one; and then as a Frame of Government, composed of organs for discharging the various functions of administration. Although the former of these influences the latter, because the federal character of a State prescribes to some extent the character of that State's governmental machinery, it conduces to clearness to deal with these two aspects separately. Accordingly I begin with the federal aspect of the Constitution.

Federations are of two kinds. In some, the supreme power of the Central Government acts upon the communities which make it up only as communities. In others this power acts directly, not only upon the component communities, but also upon the individual citi-

zens as being citizens of the Nation no less than of the several communities. The former kind of Federation may be described as really a mere League of States; the latter kind is a National as well as a Federal State.

The Australian Federation is of this latter type. So are the United States, the Swiss Confederation, and the Canadian Federation. It was however to the former type that both the United States before 1788 and Switzerland before 1848 belonged. So Germany was a mere League of States before 1866, but has been a National as well as Federal State since 1866 and 1871.

The essential feature of this latter type, with which alone we are here henceforth concerned, consists in the existence above every individual citizen of two authorities, that of the State, or Canton (as in Switzerland) or Province (as in Canada), to which he belongs, and that of the Nation, which includes all the States, and operates with equal force upon all their citizens alike. Thus each citizen has an allegiance which is double, being due both to his own particular State and to the Nation. He lives under two sets of laws, the laws of his State and the laws of the Nation. He obeys two sets of officials, those of his State and those of the Nation, and pays two sets of taxes, besides whatever local taxes or rates his city or county may impose.

Accordingly the character of each and every Federation depends upon the distribution of powers between the Nation and the several States, since some powers must be allotted to the larger, some to the smaller entity. With regard to certain powers there can be no doubt. The navy, for instance, the post-office, the control of all foreign relations, must obviously be assigned to the National Government, together with the levying of customs duties at the frontiers and the raising of revenue for the purposes above mentioned. On the other hand, matters of an evidently local nature, such as police, prisons and asylums, the system of municipal or county administration, with the power of taxing for these pur-

poses, will be allotted to the State Governments. But between these two sets there lies a large field of legislation and administration which may, according to the circumstances of each particular country and the wishes of the people who enact their constitution, be granted either to the Nation or to the States. The law of marriage and divorce, for instance ¹, criminal law ¹, bankruptcy, the traffic in intoxicating liquors ², the regulation of railways ², the provision of schools or universities ³, are all matters which have both a national and a local significance, and may be entrusted either to the National legislature or to the State legislatures according as one or other aspect of them predominates in the mind of the people.

VI. DISTRIBUTION OF POWERS BETWEEN NATION AND STATES.

Now the fundamental question in the distribution of powers between the Nation and the States is this—To which authority does the unallotted residue of powers belong? It has been found that no distribution, however careful, can exhaust beforehand all the powers that a legislature or an executive may possibly have to exercise, and it therefore becomes essential to provide, whenever a power not specifically mentioned needs to be exercised, whether it should be deemed to be rightfully exerciseable by the National or by the State authority. In other words, which of these authorities is to be deemed general legatee of any undistributed residue?

This question has been answered differently by different Federations. The United States and Switzerland leave to the States (to which they had belonged pre-

¹ In the U. S. A. a State, in Canada a Federal matter.

² In Switzerland a Federal matter, in the U. S. A. partly a Federal, partly a State matter.

³ In the U. S. A. and Germany a State matter, in Switzerland and Canada partly a Federal matter.

viously) the undistributed powers. Canada (whose Provinces were in a different position) bestows them upon the National (Dominion) Government¹. The question is the more important, because it creates in all sorts of doubtful matters a presumption in favour of the National Government or the State Governments, as the case may be. And it is specially important at the moment of creating a new Federation, because one of the difficulties always then experienced is to induce the States to resign powers they have hitherto enjoyed. Hence it reassures and comforts them to have the residue of powers not specifically distributed left still in their hands.

The Australians have followed the example of the United States and Switzerland rather than that of Canada; and they have done so for the sake of appeasing the local sentiment of the several colonies, and especially of the smaller colonies, who naturally feared that, as they would have less weight than their larger neighbours in the national legislature, they would be in more danger of being subjected to laws which their local opinion did not approve. Section 107 provides that—

‘Every power of the Parliament of a Colony which has become or becomes a State shall, unless it is by this Constitution exclusively vested in the Parliament of the Commonwealth or withdrawn from the Parliament of the State, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State², as the case may be.’

Comparatively few powers of legislation are ‘exclusively vested’ in the Commonwealth Parliament; so that upon subjects other than these the State Parliaments retain for the present their previous power to legislate.

¹ See U. S. A. Constitution, Amendment X: Constitution of Swiss Confederation, Art. 3: British North American Act (1867), sect. 91.

² These words are used to cover the case of the creation and admission of future States.

The name ‘State,’ which the Australians have substituted for ‘Colonies,’ is significant. It imports a slightly greater independence and has a more imposing sound than the Canadian term ‘Province.’

But as it is also provided that all Acts of the Commonwealth Parliament, within the range of the powers granted, shall override laws of any State Parliament, such laws as the latter may pass upon subjects open to both legislatures are left at the mercy of the Commonwealth Parliament, which may, as and when it finds time or occasion, pass Acts extinguishing, or modifying the effect of, those enacted by the States.

Now the range of powers granted to the National or Commonwealth Parliament is very wide, wider than that of Congress or of the Swiss National Assembly, or even of the Dominion Parliament in Canada. I need not enumerate the powers granted, forty-two in number, for they will be found in sects. 52 and 53 of the Australian Constitution. Among them are the following, which are not specifically given to, and nearly all of which are not even claimed by, the United States Congress:—Powers to take over State railways, and to construct and extend railways (with the consent of the State in which the railway lies), to control telegraphs and telephones and also trading and financial corporations, to take over State debts¹, to legislate on marriage and divorce, on bills of exchange and promissory notes, on invalid and old-age pensions, on arbitration and conciliation in trade disputes (where these extend beyond one State), on bounties on the production or export of goods, on the service and execution throughout the Commonwealth of the civil and criminal process and judgements of the State Courts. If these powers come to be all put in force they may leave for State action a narrower and less interesting field than it enjoys in the United States, where nevertheless the State legislatures are bodies of no great account, seldom enlisting the services of men of first-rate capacity.

¹ Canada directs the Dominion to take over the Provincial debts existing at the time of the Union. In the U. S. A. the war debts of the States were taken over by the first Congress of the Union.

VII. CONSTITUTIONAL POSITION OF THE AUSTRALIAN STATES.

The Australian Constitution, like that of the United States, assumes the States to be already organized communities, and contains nothing regarding their constitutions. The case of Canada was different, because there the previous government of the Upper and Lower Provinces, which had been one, had to be cut in two, and arrangements made for duly constituting the two halves. But in the case of Australia, the pre-existing constitutions of the Colonies, granted by the Imperial Government at various times, go on unchanged, subject only to the supersession of some of their functions by the Commonwealth, and to one or two specifically mentioned restrictions. That these restrictions are comparatively few may be partly ascribed to that aversion which the English everywhere show to this kind of safeguard against the misuse of legislature power. The omnipotence of the British Parliament seems to have fostered the notion that all Parliaments ought to be free to do wrong as well as to do right. The only things from which a State is disabled are the keeping of a naval or military force (except with the consent of the Commonwealth Parliament), coining money, and making anything but gold and silver coin legal tender¹. A State is not, as are the American States, forbidden to grant titles of nobility, or to pass any *ex post facto* law or law 'impairing the obligation of contracts.' That no such prohibitions exist in Canada may be ascribed to the fact that in Canada the National or Dominion Government has the right of vetoing laws passed by provincial legislatures, so that improper legislation can be in this way checked. The power is not often exercised in Canada, but when exercised has sometimes led to friction. This plan, however, is neither so respectful to the Pro-

¹ See sections 114 and 115 of Constitution, and compare Art. I. sect. 10 of Constitution of U. S. A.

vinces nor so conformable to general principles as is the American plan, which leaves the States subject only to the restrictions imposed by the Constitution, restrictions which *ipso iure* annul a law attempting to transgress them. And the Australians have wisely followed the American rather than the Canadian precedent. The Australians have, to be sure, in reserve a power to which nothing similar exists in America, viz. the right of the British Crown at home to veto legislation. Rarely as this right is put in force, it might conceivably be used at the instance of the National Government to avert an undesirable conflict between State statutes and National statutes. Note further that each Australian State is left as free to amend its own constitution as it was before, subject of course to the veto of the British Crown, but to no interference by the Commonwealth, whereas in Canada acts of the Provincial legislatures amending their constitutions are subject to the veto of the Dominion Government as representing the Crown.

The omission of any provision similar to the famous and much litigated clause which debar an American State legislature from passing any law impairing the obligation of contracts is especially noteworthy. That clause, introduced by the Philadelphia Convention in order to check the tendency of some reckless States to get rid of their debts, produced in course of time unexpectedly far-reaching results, from some of which American legislatures and courts have made ingenious attempts to escape. It has indeed been thought that several subsequent decisions of the Supreme Court are not easily reconcilable with the famous judgement in the Dartmouth College Case (A.D. 1818), in which the full effect of this clause was for the first time displayed. That effect has been to fetter legislation in ways which are found so inconvenient in practice that they are acquiesced in only because many State legislatures are in the United States objects of popular distrust. No

corresponding distrust seems to be felt in the British colonies, and therefore the Australians have not deemed any such prohibition needful, following the example of the British House of Commons, which in 1893 rejected a similar clause when moved as an amendment to the Irish Home Rule Bill of that year.

In another point the Australian States have been treated with respect. In each of them the nominal executive head has hitherto been a Governor appointed by the British Crown. This was the case in Canada prior to 1867: but when the Canadian Federation was formed, the appointment of the Governors of the several provinces was entrusted to the Governor-General of the Dominion, that is to say, to the Dominion Cabinet by whose advice the Governor-General, being a sort of constitutional monarch, is guided. In practice, therefore, these governorships have become rewards bestowed upon leading party politicians. The Australians wisely (as most Englishmen will think) avoided this plan. Neither did they adopt the American method of letting the people of each State elect the Governor, a method unsuited to government on the Cabinet system, because, as the State Governor is under that system only a nominal head of the Executive (the Cabinet being the real Executive), there was no good reason for setting the people to choose him, and good reasons against doing so, inasmuch as popular elections are invariably fought on party lines. Accordingly the Australians have preferred to let him continue to be appointed by the Home Government, and to allow him to communicate directly with the Colonial Office in London. His Ministers are indeed described in the Constitution (sect. 44) as being 'the Queen's Ministers.'

VIII. DIFFERENCES FROM THE UNITED STATES
AND CANADIAN FEDERATIONS.

Four other remarkable divergences, from both the American and the Canadian Federal systems, remain to be mentioned.

One relates to the judiciary. In the United States there is a complete system of Federal Courts ramifying all over the Union and exercising exclusive jurisdiction in all cases arising under Federal statutes, as well as in a number of other matters specified in Art. III. sect. 2 of the Constitution. But the State Courts remain quite independent in all State matters, and determine the interpretation of the State Constitutions and of all State statutes, nor does any appeal lie from them to the Federal Courts. In Canada this was not thought necessary, so there the same set of Courts deals with questions arising under Federal statutes and with those arising under Provincial Statutes, and the Supreme Court of Canada receives appeals from all other Courts. This is less conformable to theory than the United States plan, but does not seem to have worked ill. The danger that Courts sitting in the Provinces would, under the influence of local feeling, pervert Federal law was not serious in Canada (though a similar danger was feared in the United States in 1787), and indeed all the Canadian judges are appointed by the Dominion Government, a further illustration of the preponderance which the Nation has over the Provinces. The Australians have taken a middle course. They have established a Federal Supreme Court, to be called 'The High Court of Australia,' and have taken power for their Parliament to create other Federal Courts. So far, they follow the United States precedent. But they have given power to the Commonwealth Parliament to invest State Courts with federal jurisdiction, thereby allowing those Courts to be, as in Canada, both State and Federal. And they have also allowed an appeal from all State

Courts to the Federal High Court. By this plan the States are more directly connected with and subordinate to the National Government than they are in the United States. The Australian scheme has one great incidental advantage. In the United States the law of different States may and does differ, not only in respect of the difference between the statutes of one and the statutes of another, but also in respect of questions of common law untouched by statutes. The Supreme Court of Massachusetts may, for instance, take a different view of what constitutes fraud at common law from that taken by the Supreme Court of Pennsylvania, and there is no Court of Appeal above both these Courts to bring their views into accord. This has not happened to any great extent in Australia, because the British Privy Council has entertained appeals from all its Courts, and it will happen still less in future, because the Federal High Court will be close at hand to settle questions on which the Courts of different States may have been in disaccord.

A second point shows how much less powerful the sentiment of State sovereignty has been in Australia than it was in the United States. By an amendment (xi) to the American Constitution made in 1798 it is expressly declared that no State can be sued by a private plaintiff. But Australia expressly grants jurisdiction in such cases to its Federal High Court (sect. 75).

A third point is the curious and novel power given to a State of referring matters to the Commonwealth Parliament, and to that Parliament of thereupon legislating on such matters (sect. 51 (xxxvii)). Under this provision (which is not to be found in the Canadian Constitution¹) there is no department of State law where-with the National legislature may not be rendered competent to deal. It may be usefully employed to secure uniformity of legislation over all Australia on a number

¹ But see section 94 of the Canadian Constitution.

of subjects not within the specifically allotted field of the Commonwealth Parliament.

Finally, the Commonwealth Parliament may grant financial assistance to any State, and may take over the whole or a part of its debts as existing at the establishment of the Commonwealth¹. Provisions such as these imply, or will involve if put in practice, a relation between the National Government and the States closer than that which exists in America.

To complete this account of the relation of the Nation to the States, let it be noted that a State may surrender any part of its territory to the Commonwealth, and that the Commonwealth is bound to protect each State against invasion or, on the application of the Executive of the State, against domestic violence². This latter provision is drawn from the United States constitution³, though in America it is from the State legislature, if then in session, that the application for protection ought to come. Australia is right in her variation, because in her States the Legislature acts through the Executive. Neither provision occurs in the Constitution of Canada, which assigns military and naval defence exclusively to the Dominion Government, and makes itself responsible for the maintenance of order everywhere. In Switzerland the management of the army, in which all citizens are bound to serve, is divided between Cantons and Confederation, the supreme control remaining with the latter (Artt. 18-22). The Confederation is bound to protect a Canton against invasion and disorders, and may even itself intervene if the Executive of the Canton cannot ask it on its own motion (Artt. 16 and 17). Australia, as we have seen, allows the States to maintain a force with the consent of the Commonwealth; and this is permitted by the American Constitution also.

³ Art. II. sect. 3, and Art. IV. sect. 4

IX. THE CONSTITUTION AS A FRAME OF NATIONAL GOVERNMENT.

We may now pass on to consider the National Government, the construction whereof occupies by far the greater part of the Constitution, which, while it left the States pretty much as they were, had here to build up a new system from the ground.

The first point to be examined relates to the limitations imposed on the National Government as against the citizens generally, since I have already dealt with the limitations on its powers as against the States. Here a remarkable divergence from the American Constitution is disclosed. When that instrument was enacted, the keenest suspicion and jealousy was felt of the action of the Government to be established under it. It was feared that Congress might become an illiberal oligarchy and the President a new George the Third. Accordingly great pains were taken to debar Congress from doing anything which could infringe the primordial human rights of the citizen. Some restrictions are contained in the original Constitution: others fill the first nine amendments which were passed two or three years later, as a part of the arrangements by which the acceptance of the Constitution was secured. And down till our own time every State Constitution in America has continued to contain a similar 'Bill of Rights' for the protection of the citizens against abuse of legislative power. The English, however, have completely forgotten these old suspicions, which, when they did exist, attached to the Crown and not to the Legislature. So when Englishmen in Canada or Australia enact new Constitutions, they take no heed of such matters, and make their legislature as like the omnipotent Parliament of Britain as they can. The Canadian Constitution leaves the Dominion Parliament unfettered save by the direction (sect. 54) that money shall not be appropriated to any purpose

that has not been recommended to the House of Commons by the Executive, a direction embodying English practice, and now adopted by Australia also. And the Australian Constitution contains but one provision which recalls the old-fashioned Bill of Rights, viz. that which forbids the Commonwealth to 'make any law for establishing any religion or for imposing any religious observance or for prohibiting the free exercise of any religion.' The Swiss Constitution, influenced by French and American models, is in this respect more archaic, for it imposes a series of disabilities on its Legislature in the interest of individual freedom (sectt. 39, 49, 54-59). This diversity of attitude between the English on the one hand and both the Americans and the Swiss on the other is a curious instance of the way in which usage and tradition mould a nation's mind. Parliament was for so long a time the protector of Englishmen against an arbitrary Executive that they did not form the habit of taking precautions against the abuse of the powers of the Legislature; and their struggles for a fuller freedom took the form of making Parliament a more truly popular and representative body, not that of restricting its authority.

The point just examined is one which arises in all Rigid Constitutions, whether Federal or Unitary. But the next point is one with which only Federations are concerned; and it is one in which all the great Federations agree. All have adopted the same method of providing both for the predominance of the majority of the people considered as one Nation, and for the maintenance of the rights of the States considered as distinct communities. The Americans invented this method: the Swiss, the Canadians, the Germans, and now the Australians, have imitated them. This method is to divide the Legislature into two Houses, using one to represent the whole people on the basis of numbers, and using the other to represent the several States on the basis (except in Germany) of their equality as auton-

mous communities. It was this device that made Federation possible in the United States, for the smaller States would not have foregone their independence in reliance upon any weaker guarantee.

X. THE LEGISLATURE.

The Australian scheme provides (sectt. 7-23) for an Upper House or Senate of thirty-six members, six from each State, and a House of Representatives (sectt. 24-40) of seventy-five members, elected on a basis of population, so that forty-nine members will come from the two large States, New South Wales and Victoria, and twenty-six from the four small States. No Original State is ever to have less than five.

The equal representation of the six Original States is always to be maintained, but the number of Senators may be increased, and when new States come to be formed, the Parliament may allot to them such number of Senators as it thinks fit. Senators sit for six years, and do not all retire at the same time. These features are taken from the Constitution of the United States, which, as already observed, has been a model for subsequent Federal Upper Houses. But there are remarkable variations in the Australian scheme.

1. In the United States each newly-created State receives as a matter of right its two Senators. In Australia the Commonwealth may allot such number as it thinks fit.

2. In the United States one-third of the Senate retires every two years. In Australia one-half retires every three years.

3. In the United States the President of the Senate is the Vice-President of the United States, chosen by the people¹. In Australia, the Senate is to choose its own President.

¹ *I.e.* practically by the people, though formally by a body of electors elected for that purpose.

4. In the United States the quorum is one more than a half of the total number ; in Australia one-third of the total number.

5. In the United States the Legislatures of the several States elect the Senators. In Australia the Senators are elected by the people of the State.

This last point is one of great interest. Tocqueville, writing in 1832, attributed (erroneously, as the sequel has shown) the excellence of the American Senate to the method of election by the State Legislatures¹. Since his days the American Senate has declined ; and so far from this mode of election having tended to sustain its character, the general, though not unanimous, opinion of the wise in America deems the Senate to be injured by it, and desires a change to the method of election by direct popular vote. It was partly because the Australian Convention had become aware of this tendency of American opinion that they rejected the existing American plan ; nor is it impossible that the Americans themselves may alter their system, which gives greater opportunities for intrigue and the use of money than popular election would be likely to afford. In Australia, the Senators are in the first instance to be elected by the people, each State voting as one electorate, but this may be altered (*e.g.* to a system of district elections) by the Parliament of the Commonwealth, or failing its action, by the Parliament of a State. It will be interesting to see what experiments are tried and how they work. District voting may give different results from a general State vote, and a party for the moment dominant may choose the plan that best suits it.

6. In the United States the Senate is an undying body, perpetually renewed by fresh elections, never losing more than one-third of its members at any one time. In Australia the Senate may be dissolved in case a deadlock should arise between it and the House of Representatives.

¹ See as to this, Essay VI, p. 336 and p. 352.

The Senate is the sheet-anchor of the four small States. Commanding a majority in it, they have consented to acquiesce in the great preponderance which their two larger neighbours possess in the House of Representatives. The numbers of the latter House are to be always as nearly as practicable double those of the Senate, a point whose importance will presently appear.

The House is to continue for three years (subject of course to dissolution), a term intermediate, though inclining in the democratic direction, between the two years of the American Congress and the seven (practically six) years of the British House of Commons. The Canadian term is five years. Until the Commonwealth Parliament otherwise provides, the electoral suffrage is to be (as in the United States) the suffrage prescribed by State law for the election of members of the more numerous State House, and it is expressly provided, doubtless with a view to the fact that women's suffrage already exists in two colonies, that no law shall prevent a State voter from voting at Commonwealth elections. So far from securing, as does the United States Constitution, that no person shall be excluded on the ground of race from the suffrage¹, Australia has expressly provided that persons belonging to a particular race may be excluded, for she declares (sect. 25) that in such case the excluded race is not to be reckoned among the population of the State for the purposes of an allotment of representatives. Plural voting is forbidden. The quorum of members is a mean between the inconveniently large quorum (one-half) of the American, and the very small one (forty) of the British House. The seat of any Senator or member of the House becomes *ipso facto* vacant if he fails (without permission) to attend any session for two continuous months. No person having any pecuniary interest in any agreement with the public service (except as member of an incorporated company of at least twenty-five persons), or holding any office of

¹ See Amendment XV to the Constitution.

profit under the Crown, can sit in either House, unless he be a Minister either of the Commonwealth or of a State. The exception is noteworthy, not only because it is framed with a view to the establishment of Cabinet Government, but also because it implies that a man may, contrary to American and Canadian usage, be at the same time both an executive official of a State and also a member of the Federal Legislature. It would appear that women are eligible to membership of either House. Every Senator and Representative is to receive a salary, fixed for the present at £400 (\$2,000) a year.

XI. THE EXECUTIVE.

The Executive is to consist of the Governor-General and the Ministers. To the great convenience of the Australian people, the head of the Executive does not need to be elected either by popular vote (as in the United States) or by the Chambers, as in France and Switzerland. He is nominated by the British Crown, and holds office so long as the Crown pleases, receiving a salary fixed, for the present, at £10,000 (\$50,000) a year (exactly the salary of the American President). He has an Executive Council, modelled on the British Privy Council (though the name Privy Council is not used as it is in the Canadian Constitution), and from it he chooses a number of Ministers (fixed for the present at seven) who are to administer the several departments of the public service. They must be members of one or other House of Parliament—a remarkable provision, for though this is a British practice, that practice has never been embodied in any positive rule. As the Governor-General is only a constitutional figure-head, these Ministers will in fact constitute the ruling executive of the Commonwealth.

XII. THE JUDICIARY.

The Judiciary is to consist in the first instance of a Federal High Court (containing a Chief Justice and at least two other judges) capable of exercising both original jurisdiction in certain sets of cases, and also appellate jurisdiction not only from single Federal Judges and inferior Federal Courts, but also from the Supreme Courts of the States. Power is taken both to establish lower Federal Courts and to invest State Courts with federal jurisdiction. But besides this Judiciary proper, there is created a second Court for dealing with cases relating to trade and commerce, under the name of the Inter-State Commission (sect. 101). This remarkable and very important institution has doubtless been suggested by the United States Inter-State Commerce Commission created by Congress some eighteen years ago in order to deal with railway and water traffic between the States. Its functions will be half-administrative, half-judicial, and in questions of pure law an appeal will lie from it to the High Court, while a guarantee for its independence is found in the clause which declares that its members shall not be removed during their seven years' term of office. All Federal Judges are to be appointed by the Governor-General, that is to say, by the Executive Ministry. All trials (on indictment) for any offence against the laws of the Commonwealth shall be by jury, and held in the State where the alleged offence was committed. The judicial establishments of the States remain unaffected, and the judges thereof will continue to be appointed by the State Executives.

In determining the functions of the High Court there arose an important question which seemed for a moment to threaten the whole scheme of Federation. The draft Constitution which the Convention had prepared and which the people had approved by their vote provided that questions arising on the interpretation of the Con-

stitution as to the respective limits of the powers of the Commonwealth and of the States, or as to the respective limits of the constitutional powers of any two or more States, should be adjudicated upon by the High Court of the Commonwealth, and that no appeal should lie from its decision to the Queen in Council (*i.e.* to the Judicial Committee of the Privy Council in England, which is the Supreme Court of Appeal from the British Colonies and India), 'unless the public interest of some part of Her Majesty's dominions, other than the Commonwealth or a State, are involved.' When the draft reached England to be embodied in a Bill, the British Government took exception to this provision as tending to weaken the tie between the mother country and the colonies. There were many in England who thought that it was not in the interest of Australia herself that she should lose, in questions which might involve political feeling and be complicated with party issues, the benefit of having a determination of such questions by an authority absolutely impartial and unconnected with her domestic interests and passions. How much better (they argued) would it have been for the United States at some critical moments could they have had constitutional disputes adjudicated on by a tribunal above all suspicion of sectional or party bias, since it would have represented the pure essence of legal wisdom, an unimpeachable devotion to legal truth!

To this the Australians replied that the experience of the United States had shown that in constitutional questions it was sometimes right and necessary to have regard to the actual conditions and needs of the nation; that constitutional questions were in so far political that where legal considerations were nearly balanced, the view ought to be preferred which an enlightened regard for the welfare of the nation suggested; that a Court sitting in England and knowing little of Australia would be unable to appreciate all the bearings of a constitutional question, and might, in taking a purely technical

and possibly too literal a view of the Constitution, give to the Constitution a rigidity which would check its legitimate expansion and aggravate internal strife. Australia must—so they pursued—be mistress of her own destinies, and as it is she that had framed and procured the enactment of this Constitution, so by her ought the responsibility to be borne of working it on its judicial as well as its executive and legislative side. Not only was this better for Australia herself, but it would be more conducive to the maintenance of the connexion between the Commonwealth and the mother country.

After some wavering, the British Government, perceiving the risk of offending Australian sentiment, gave way. They dropped in Committee of the House of Commons the alteration which they had introduced into the Australian draft, substituting for it an amendment which, while slightly varying the original terms of the draft, practically conceded the point for which the Australian Delegates, sent to England to assist in passing the measure, had contended. The Act as passed provides that no appeal shall lie to the Crown in Council upon the constitutional questions above-mentioned unless the High Court itself shall, being satisfied that the question is one which ought to be determined by the Privy Council, certify to that effect. In all other such cases its judgement will be final.

Appeals to the Privy Council in questions other than constitutional will continue to lie from the Supreme Courts of the States (with the alternative of an appeal to the High Court) and from the High Court itself, when special leave is given by the Privy Council. The Commonwealth Parliament may limit the matters in which such leave may be asked, but the laws imposing such limitations are to be reserved for the pleasure of the Crown.

The scheme of judicature above outlined follows in the main the model contained in the American Consti-

tution. It does not draw the line between State and Federal matters and courts so sharply, for appeals are to lie from State Courts in all matters alike, and State Courts may receive jurisdiction in Federal matters. On the other hand, it is more conformable to principle than either the Canadian plan, which provides no Federal Courts save the Supreme Court and gives the appointment of all judges alike to the Dominion Government, or the Swiss plan, which refers questions of conflict between the Nation and the Cantons, or as to the constitutionality of Federal laws, not to the Judiciary at all, but to the Federal Legislature. Broadly speaking, the Australian High Court will have to fill such a place and discharge such functions as have been filled and discharged in America by that exalted tribunal which Chief Justice John Marshall and other great legal luminaries have made illustrious. In working out the provisions of the Constitution by an expansive interpretation, cautious but large-minded, it may render to Australia services not unworthy to be compared with those which America has gratefully recognized.

XIII. WORKING OF THE FRAME OF GOVERNMENT. THE CABINET.

Now let us see how this Frame of Government, which I have briefly outlined in its salient features, is intended to work.

Its essence lies in a matter which is not indicated by any express provision, the dependence of the Executive upon the Legislature. Herein it differs fundamentally from the American and Swiss systems. It reproduces the English system of what is called Cabinet or Responsible Government; that is to say, a Government in which the Executive instead of being, as in America, an independent authority, directly created by the people and amenable to the people only, is created by and responsible to the Legislature. As and when the British colo-

nies respectively obtained self-governing institutions, each of them adopted this scheme, since it was the one familiar to them at home: and to it they seem all determined to adhere.

Its distinctive features are these.

The nominal head of the Executive, in Britain the Crown, in Australia the Governor-General as representing the Crown, is permanent, and is not responsible to the Legislature, because he acts not on his own views, but upon the advice of his Ministers.

The Ministers are responsible to the Legislature which virtually chooses them, and they depend upon its confidence for their continuance in office.

The Ministers are however not wholly at the mercy of the Legislature, because they may dissolve it, that is to say, may appeal to the people, in the hope that the people will elect a new Legislature which will support them. This kind of government accordingly rests on a balance of three authorities, the Executive, the Legislature, and the People, the people being a sort of arbiter between Ministry and Parliament. As the Ministry can at any moment appeal to the people, the threat of appealing puts pressure upon the Parliament, and keeps a majority cohesive. In the existence of this power of sudden dissolution there lies a marked difference from the American scheme, which some one has called *Astronomical*, because the four years' term of office of the Executive and the two years' term of the Legislature are both fixed by the earth's course round the sun.

I have spoken of the Legislature as the authority to which the Ministry is responsible. But what is the Legislature? In England, although Parliament consists of two Houses, the Minister-making power resides solely in the House of Commons. Being elective, the House of Commons has behind it the moral weight of the people and the prestige of many victories. Being the holder of the purse, it has the legal machinery for

giving effect to its will, since without supplies administration cannot be carried on. Accordingly, though the existence of two often discordant Houses may arrest or modify legislation in Britain, it does not affect the executive conduct of affairs, save on the rare occasions when immediate legislation is deemed indispensable by the Executive. The same remark applies to Canada. There also one finds two Houses, but the Senate, being a nominated and not a representative body, holds an entirely secondary place. The Ministry may disregard a vote of want of confidence passed by it, just as in England they disregard an adverse vote of the House of Lords. In Australia, however, things will be quite different. There the Senate has been constituted as a representative body, elected by the peoples of the States; and as the protector of the rights and interests of the States it holds functions of the highest importance. Its powers (save in one point to be presently mentioned) are the same as those of the House. In whom then does the power of making and unmaking ministries reside? Wherever one finds two assemblies, one finds them naturally tending to differ; and this will be particularly likely to occur where, as in Australia, they are constructed by different modes of election. Suppose a vote of no confidence in a particular Ministry is carried in one House and followed by a vote of confidence passed in the other? Is the Ministry to resign because one House will not support it? It retains the confidence of the other; and if it does resign, and a new Ministry comes in, the House which supported it may pass a vote of no confidence in those who have succeeded it.

The problem is one which cannot arise either under the English or under the American system. Not under the English, because the two Houses are not co-ordinate, the House of Commons being much the stronger. Not under the American, because, although the Houses are co-ordinate, neither House has the power of displacing the President or his Ministers. It is therefore a new

problem, and one which directly results from the attempt to combine features of both schemes, the Cabinet system of England and the co-ordinate Senate, strong because it represents the States, which a Federal system prescribes.

XIV. PROVISIONS AGAINST DEADLOCKS.

This, however, is only one, though perhaps the most acute, of the difficulties that arise from the existence of two co-ordinate Houses. Their differences upon questions of legislation are always liable to produce deadlocks. These annoying phenomena occur in England, though there the House of Lords, except upon Irish questions, usually gives way (even without a dissolution of Parliament), because it is afraid of incensing the people and thereby bringing about its own destruction if it continues to resist the national will. In Irish questions the Upper House has been apt to assume that the people of England and Scotland are not sufficiently interested to resent very keenly its difference from the Commons. In the United States there is no remedy for such deadlocks. They have to be endured, at whatever cost. The resistance of the Senate to various plans suggested by the House for dealing with the slavery question may be reckoned among the causes which brought on the War of Secession. The Australian colonies themselves have had frequent experience of deadlocks in matters of legislation between the two Houses, for in every colony there have been two Houses, though in every colony it is the more popular House which has controlled the Executive.

The difficulties I have indicated were fully before the minds of the statesmen who sat in the two Conventions. An ingenious device has been contrived for dealing with them (sect. 57). When the House passes a law and the Senate disagrees, the House may pass it again after three months, and if the Senate still disagrees, the Gov-

ernor-General may thereupon dissolve both House and Senate together, unless the Parliament is within six months of its natural end by effluxion of time. If after such dissolution the new House again passes the measure, and the Senate once more disagrees, the Governor may convene a joint sitting of both Houses. If the proposed law is then passed by an absolute majority of the whole Parliament so convened in joint sitting, it shall be taken to have been duly passed by both Houses.

This method involves the expenditure of a good deal of time and the worry of a double general election, one for the House and one for the Senate. But it may prove to be the best method of solving a problem which neither Britain nor the United States has yet attempted to solve, and which certainly needs solution. The reader who remembers that the numbers of the House have been fixed to be always double those of the Senate, will now see how necessary such a provision was in order to secure that in this final trial of strength between Senate and House the principle of State rights and the principle of population shall each have its due recognition. Should these two principles come into collision, should, for instance, all the members from the four small States be of one mind and all the members from the two large States of another mind, the principle of population will prevail, for in the two Houses sitting together, the large States will have sixty-one votes (twelve senators and forty-nine representatives), whereas the small States will have only fifty (twenty-four senators and twenty-six representatives). Such a conjuncture may however never arise.

XV. RELATIONS OF THE TWO HOUSES.

The question remains which of the two Houses will hold the place of the British House of Commons as determining the tenure of office by Ministries. Upon this question light may be cast by the provisions with regard to money bills. The Constitution enacts (sect. 53) that

all bills appropriating revenue or imposing taxation must originate in the House, and that the Senate may not amend taxing bills, or those 'appropriating money for the ordinary annual services of the Government,' though it may return such bills to the House suggesting certain amendments in them. The Senate may however reject such bills. As this scheme, which somewhat resembles that of the American Constitution¹, itself suggested by the practice of England, seems to throw upon the House the primary function of providing money for the public service, and thus the primary control of the national exchequer, it would seem that Ministers, unable without money to carry on that service, must stand or fall by a vote of the House and not by a vote of the Senate. Yet the Senate, though it cannot take the first steps for granting money, can withhold money; and if it does so in order to get rid of a Ministry it dislikes, nothing short of the deadlock provision above described can be invoked. Nor can the expedient of mixing up a number of different taxing provisions in one Bill, or inserting other matter in appropriation Bills ('tacking'), be resorted to, for these are expressly prohibited by the Constitution (sectt. 54, 55). Possibly in practice the Houses will frequently agree to let the accustomed services of the year be provided for without much controversy, and will reserve their serious conflicts for new proposals regarding taxation or appropriation.

Australians evidently expect that the usage hitherto prevailing in all the Colonies of letting the Ministry be installed or ejected by the larger House will be followed. Nevertheless the relations of the Commonwealth Houses are so novel and peculiar, that the experience of the new Government in working them out will deserve to be watched with the closest attention by all students of politics. Englishmen in particular have good reason

¹ In the U. S. A., however, the Senate may and does amend both revenue-raising and appropriation bills, and indeed frequently prevails against the House in the quarrels which arise over these matters.

for doing so, because England, when she has substituted a representative Second Chamber for her present theoretically indefensible House of Lords, will have to devise some means for avoiding or solving deadlocks between such a Chamber and the House of Commons.

Some high Australian authorities have appeared to doubt whether two co-ordinate Houses can be made to work along with Cabinet Government. They observe that although there may be sometimes a willingness to make compromises for the sake of the public service, there is also in all governments, and certainly not least in those of the United States and the British Colonies, a tendency to press every legal right to its furthest limit, even if the machine should be stopped thereby. Were such stoppages to become frequent, Australia might, they think, be driven to amend her Constitution by so far disjoining the Executive from the Legislature as to give it something of the permanence it enjoys in America and Switzerland¹.

The relations of the Senate to the House may largely depend on factors still undetermined. One of these is the growth of population. Should the small Colonies grow rapidly, their representation in the House would before long be fairly proportionate to that which they enjoy in the Senate, so that the balance of parties might, so far as the size of States is concerned, tend to be nearly the same in both Houses. Another is the character of the controversies which will arise. These may not be such as to set the small States against the large ones, and the three party organizations, which are already strong, though they possess no such Machine System as America enjoys, may find their support pretty equally in all or most of the States, so that the balance of parties

¹ It was suggested in the Convention by Mr. Playford (then Prime Minister of South Australia) that the two Houses sitting together might appoint the Executive Ministry, but this plan deviated too far from British Colonial practice to find acceptance. A similar suggestion was made by Sir John Cockburn in the Sydney Convention in 1891. See his speech in an interesting volume published by him entitled *Australian Federation* (p. 139).

may in practice be found to differ but little in the Senate from what it is in the House. Thus these particular wheels or shafts of the constitutional machine, which are deemed less able than others to bear a severe strain, may not for a long while to come have any severe strain thrown upon them.

Another thing which may affect the relations of the two Houses is the comparative attractions which each will have for high political capacity. In the United States the Senate became, within thirty years from the establishment of the Constitution, an assembly much stronger, through the eminence of its members, than was the House of Representatives. As its term of membership was longer (six years against two years), and as it had certain quasi-executive functions in connexion with foreign relations and appointments, men of ability preferred it to the House, and the House constantly saw its best talent drawn off to its rival. The Senate has to-day no such intellectual ascendancy as it had then, but capable men still migrate to it when they can from the House of Representatives. If the House establishes in Australia, as it will apparently do, its sole right to make and unmake Ministries, it will be the more tempting field for ambition: yet something will depend upon the amount of genius and character which the Senate attracts, for the presence of these in abundant measure will give it weight with the nation.

It has been suggested in Australia that the Senate with its thirty-six members is too small. The Senate of the United States however began with twenty-six; and it has been a great advantage to that body that its original numbers were small, for traditions more dignified than those of the tumultuous House were formed, and a somewhat stronger sense of personal responsibility was developed just because the individual was not lost in a crowd.

XVI. MISCELLANEOUS PROVISIONS.

Questions of trade and finance fill a chapter of the Constitution (sectt. 81-105); and it was indeed these questions, next to the issue between the large and the small States, that gave most trouble to those who framed the instrument. It is provided that the collection and control of all duties of customs and excise shall pass to the Commonwealth, but that not more than one-fourth thereof shall, for ten years at least, be retained by the Commonwealth, the other three-fourths being paid over to the several States, or applied to payment of the interest on their respective debts, should these debts be assumed by the Commonwealth. This arrangement was deemed needful to supply the States with funds for defraying their administrative expenses and the interest on their debts, seeing that the chief part of their revenue arose from customs and excise, the five which prepared the Constitution, except New South Wales, having adopted a protective policy. Bounties may be given either by the Commonwealth, or by the States with its consent. There are provisions regarding the collection of the customs, the control of railways and settlement of railway rates, the use of rivers for irrigation and water storage, and the State debts, but as these are largely temporary, and have little special interest for the student of constitutions, important as they are to Australian industries, I mention them only to show how elaborately the scheme of union has been worked out, and on how many perplexing topics, settled provisionally by the Constitution, the Commonwealth Parliament will have to legislate.

The question of the spot where the capital should be placed gave rise, as had happened in the United States and in Canada, to some controversy. It was adjusted by providing that the seat of Federal government should be in the colony of New South Wales, but at least 100 miles from Sydney. Here an area is to be set apart

of not less than 100 square miles, which shall be under the jurisdiction of the Commonwealth, as the District of Columbia is under the authority of the National Government in the United States: and here a stately city will doubtless in time spring up.

Power is taken to admit new States, whether formed out of existing States or not, upon any terms and conditions (*e.g.* as to number of Senators) which the Parliament may fix, but if the new State is formed out of an old one, only with the latter's consent. The Parliament has also full power to accept and provide for the administration of any territory transferred to it by the Crown, so that no constitutional questions can arise resembling that which has occupied American lawyers since the annexation of Puerto Rico.

XVII. AMENDMENT OF THE CONSTITUTION.

Last of all we come to the mode of amending the Constitution, a mode easier to apply than that prescribed for the United States, but showing the influence to some extent of the American though more largely of the Swiss model in its reference to the popular vote.

Every law proposing to alter the Constitution must be passed by an absolute majority of each House, and thereupon (after two but before six months) be submitted to the voters of every State. If in a majority of States a majority of the electors voting approve the proposal, and if these State majorities constitute a majority of all the electors voting over the whole Commonwealth, the amendment is passed, and is then to be presented to the Crown for assent. Should the two Houses differ, one passing the proposed law and the other rejecting it (or passing it with an amendment which the first-mentioned House rejects), the House which approves the proposal may again pass it, and if the dissenting House again dissents, the amendment may be submitted to the people as if both Houses had passed it. The de-

cision of the people is final. To meet the fact that the suffrage is not in all the States confined to men, it is further provided that, in any State wherein all adults are entitled to vote, only one half of the vote shall be counted¹.

Thus the requirements for the passing of an Amendment are:—

1. Absolute majority in each House of Parliament, or else absolute majority in one House given twice, the second time after three months' interval, *plus* submission on both occasions to the other House.

2. Approval of the people in a majority of States (*i.e.* at present in four States at least).

3. Approval of a majority of the people voting over the whole Commonwealth.

The American Federal Constitution requires a two-thirds' majority in each House of Congress and a three-fourths' majority of States, or else the proposal of a Convention by two-thirds of the States and a three-fourths' majority of States approving what the Convention has settled, conditions extremely difficult to secure. The Swiss system permits the Constitution to be amended by the same process as is applied to the passing of laws, *plus* a popular vote which results in a majority of Cantons and in a majority of the people voting over the whole Confederation.

XVIII. RELATIONS OF THE AUSTRALIAN COMMONWEALTH TO THE CROWN.

It has not seemed necessary to set forth the relations of the Commonwealth to the British Crown, because these relations are substantially those which have heretofore existed between the Crown and each of the self-

¹ But 'no alteration diminishing the proportionate representation of any State in either House of the Parliament, or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing or otherwise altering the limits of the State, shall become law unless the majority of the electors voting in that State approve the proposed law' (sect. 128).

governing colonies now united in the Federal Commonwealth. The chief difference is that the Commonwealth Parliament receives certain powers (as to extra-territorial fisheries and relations with the islands of the Pacific) which were previously exerciseable only by the (now extinct) Federal Council of Australasia (mentioned above), that it has a general power to legislate on 'external affairs' (a somewhat vague term, sect. 51, xxix), and that it may 'exercise within the Commonwealth, at the request or with the concurrence of the Parliaments of all the States directly concerned, any power which can now be exercised only by the Parliament of the United Kingdom or by the Federal Council of Australasia' (sect. 51, xxxviii). Apart from these provisions, which may give rise to some delicate questions, the principles and practice which have guided the action of the Home Government and of the Colonial Governors will apparently be preserved. Though the Imperial Parliament has an unquestioned right to legislate for every part of the British dominions so as to override all local legislation, it does not now exercise this power except for a few purposes of utility common to all, or many, British possessions, such as for the regulation of merchant-shipping or copyright, and when it does so, it secures the assent of the self-governing Colonies. So again, though the Crown has the legal right to withhold consent from Colonial Statutes, this right is rarely exerted, and then only in respect of some general imperial interest which it is supposed that the statute in question may prejudicially affect, *i.e.* the Crown's right is not exerted in the interest of any class of persons in the Colony or in pursuance of any particular view entertained either by the Governor there or by the Ministry at home. The new Australian Constitution provides (sectt. 58-60) that when a measure passed by the Parliament is presented to the Governor-General, he may either assent to it in the Queen's name (but subject to a power to the Queen to disallow the same within one year) or he may withhold

assent; or he may reserve it for the Queen's pleasure, in which last case it shall not take effect unless he announces within two years that the Queen has assented to it. This right of veto, though it looks on paper larger than that which belongs to the President of the United States, seeing that the President's veto can be overridden by a two-thirds' majority in each House of Congress, is in reality far more limited, and will constitute no check (except where imperial interests may be affected) upon the practically sovereign power of the Commonwealth Parliament.

XIX. COMPARISON WITH THE CONSTITUTIONS OF THE UNITED STATES AND CANADA.

Before I make some general reflections on the character of this Australian Constitution, it is worth while to note summarily the principal points in which it differs from the two other Federal Constitutions which it most resembles.

The provisions which it has borrowed from the American Constitution have been already adverted to. It differs from that Constitution in the following (among other) respects:—

1. It is a longer instrument, going into much fuller detail on many topics.

2. It leaves less power to the States and gives more power to the Commonwealth; and it enables the Commonwealth Parliament to legislate for a State upon the State's request, a thing which lies quite outside the functions of Congress.

3. It does not establish a complete system of Federal Courts covering the whole area of the Commonwealth, but allows State Courts to be invested with Federal jurisdiction.

4. It makes the Federal High Court a Court of appeal from State Courts, whereas in the United States each State Supreme Court is final in its proper sphere.

5. It contains hardly any restrictions, in the nature of a 'Bill of Rights,' upon the power of the Federal Legislature over the individual citizen.

6. Instead of disjoining Legislature and Executive, it unites them closely by the system of Responsible or Cabinet Government, and so far from excluding every official from Congress, it makes a seat in Parliament a condition of Ministerial office.

7. It vests the choice of the Head of the Executive, not in the people, but in an external authority, the British Crown. To be sure, this Head is nominal and not responsible either to the people or to the legislature.

8. It vests the election of Senators in the people, not in State Legislatures, gives the Senate no power of amending but only of suggesting amendments in money bills, makes the Senate dissoluble in case of a deadlock between it and the House, and contemplates the possibility that new States may have a smaller representation in the Senate than original States.

9. It gives to the Executive no such veto on legislation as the President has in the United States. I have already explained that the veto of the Governor-General and the Crown is a different thing, and rarely employed.

10. It makes the amendment of the Constitution a much less tedious and difficult process.

Thus it may be said that, as compared with the American Constitution, it vests more power in the National Government as against the State Governments, and that, as between the various departments of the National Government itself, it concentrates power more fully in the hands of the Legislature and imposes fewer restrictions upon its action.

The Constitution of Canada seems at first sight nearer to that of Australia than does the American. It has a Monarch, represented by a Governor-General, for the head of its Executive. It contemplates a number of States small when compared with the forty-five of the

American Union. It has adopted the British system of Cabinet or responsible Government.

But the differences are really so considerable as to place Australia's scheme as far from that of her colonial sister as from the American. Among them are the following:—

1. The Canadian Constitution prescribes the Constitutions of the several Provinces, though it permits the Provincial legislatures to alter them (subject to a Federal veto). The Australian assumes its State Constitutions as existing, and makes no change in them, except so far as the Federation controls or supersedes them. Hence the antecedent power of changing them remains, so far as they are not affected by the Federal Constitution.

2. Australia leaves to the States all residuary powers (*i.e.* powers not expressly granted). Canada withholds them from the Provinces and vests them in the Dominion.

3. Australia leaves the State Governors to be appointed, as now, by the Home Government, apart from Federal interference. Canada gives the appointment of them to the Federal Ministry. And whereas in Canada a Provincial Governor cannot communicate directly with home but only with the Governor-General, in Australia the State Governor and his Ministers are in direct touch with the British Government in London.

4. Australia gives to the Federal Government no right whatever to interfere with State Statutes. Canada invests the Dominion Government with a veto on Provincial legislation by placing the Governor-General as regards such legislation in the place which the Queen holds as regards Dominion legislation.

5. Australia distinguishes Federal from State jurisdiction, taking power to establish Federal Courts other than her High Court, and to invest State Courts with Federal jurisdiction. Canada has no special Federal Courts other than the Supreme Court of the Dominion.

6. Australia makes her Senate an elective assembly. In Canada the Senate is nominated by the Dominion Government, and is therefore a weak body, quite unfit to try conclusions with the House which has the people behind it.

7. Australia provides a method whereby the Commonwealth may amend its Constitution. Canada has no such method, and thereby leaves amendment to the Imperial Parliament of the United Kingdom.

This comparison shows that the Australian scheme of Federal Government stands intermediate between that of the United States and that of Canada. In the United States, the Federal Government has less power as against the States than in Australia. In Canada, the Federal Government has more power, or at least a wider range of action. In other words, the Australian system approaches nearer, in point of form, to a Unitary Government than does the United States, but not so near as does Canada. I am speaking merely of form, that is, of the institutions as they stand on paper, for it does not necessarily follow that the spirit in which institutions are worked will precisely correspond to their form. The old Romano-Germanic Empire, for instance (1638-1806), was less unitary in practice than would have been collected from its form; the new German Empire (since 1871) is more unitary in spirit and working than its form would necessarily convey.

XX. GENERAL OBSERVATIONS ON THE CONSTITUTION.

Technically regarded, the Constitution is an excellent piece of work. Its arrangement is logical. Its language is for the most part clear and precise. The occasional, and perhaps regrettable, vagueness of some expressions appears due, not to any carelessness of the draftsmen, but to the nature of the subject-matter. The cumbrousness of the provisions regarding customs, duties, and the control of railways is the almost inevitable result of

an effort to meet the claims and appease the apprehensions of neighbouring communities with interests that have been deemed opposed. Although it is much longer, as well as less terse, than the Constitution of the United States, going into fuller detail, and with more of the flavour of an English statute about it, it nevertheless, like that Constitution, leaves much to be subsequently filled up by the action of the legislature. A very large field of legislation remains common to the States and the Commonwealth Parliament; and though statutes passed by the latter will of course override or supersede those which may have been passed by the former, it may be many years before the higher Parliament finds leisure to cultivate all the ground which lies open before it. A further range of activity for that Parliament may disclose itself if the State legislatures should exert the power they possess of asking the Commonwealth to take over part of their work. And apart from both these lines of legislative action, the Parliament will find a very large number of matters which the Constitution has expressly directed it to settle by statutes. Till such statutes have been enacted, many points material to the working of the system will remain undetermined.

In two points the experience of the United States has been, consciously or unconsciously, turned to account. The complaint has often been made in America that the Constitution contains no recognition of the Supreme Being. The Australians have introduced such a recognition in the preamble of the Imperial Act establishing the Constitution, which runs as follows: 'Whereas the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, humbly relying on the blessing of Almighty God, have agreed to unite in one indissoluble Federal Commonwealth under the Crown of the United Kingdom,' &c. And they have also solemnly enounced in the same preamble that indissolubility of their union which the Americans did not enounce in 1788, and the absence of which from the instrument gave

rise to endless argumentation on the part of those who maintained the right of a State to retire from the Federation.

The perfection of any Federal system may be tested by the degree of thoroughness with which the Federal principle is worked out in its application, not only to the legislative, but also to the executive and judicial branches of government. In this respect the Australian scheme is less perfect than the American; for the Commonwealth has received power to legislate, no doubt at the request of the State, on purely State matters, to return to the States part of the revenue it collects, and to assume the pecuniary liabilities of the States. There is also, as already noted, no such effort as in America to secure that questions of State law shall be determined solely by State Courts, for such cases may be appealed from State Courts to the Federal High Court. Thus the Nation looms large over the whole instrument, overshadowing the States. There are indeed many provisions for safeguarding the interests of the States, yet these are not so much recognitions of States' rights as stipulations made to secure material advantages, industrial or commercial or financial. An explanation of this remarkable feature of the scheme may be found in the phenomena of Australian as compared with those of American history. The thirteen States which united in 1788-9 had each of them a long history. The two oldest dated back to the beginning of the seventeenth century. The youngest had nearly sixty years of political life behind it. All were animated by a strong sentiment of local independence, and by a passion for liberty which had become associated with local independence. Their notions of a Unitary Government were formed from England, whose monarch they had latterly learned to hate as their oppressor. Hence their love for their States was largely sentimental. Their minds were filled, not by the mere sense of what they gained from their States as business men, but by the loyalty they bore to

their States as protectors of their civic rights and embodiments of their historical traditions.

Very different were the feelings of the Australians. The oldest colony dated back scarcely more than a hundred years, and had enjoyed responsible government for less than fifty. Proud as each colony was of its progress, there had not been time for those political traditions to be formed in which the love of local independence roots itself. Neither were there between the several colonies such differences of origin or of usages and ways of life as separated the New Englanders from the men of Virginia and the Carolinas, for the Australians had emigrated so recently from Britain that no local types had yet been formed. Still less was there that aversion to a Unitary system of government which the strife with England had evoked among the Americans. The only political model which the Australians knew at first hand was the government of Britain by its Parliament, a government which had ceased in 1832 to be oligarchic, and had since 1867 begun to be democratic. Accordingly, among the Australians, State feeling had a thoroughly practical and business character. It took in each man the form of a resolve to secure the agricultural and trading interests of his own part of the country. It was in fact the wish to make a good bargain for his community and himself. Sentiment there was and is. But the sentiment gathered round the Commonwealth of the future rather than the Colony of the past. The same kind of feeling which attached the sons of the Cavaliers to Virginia and the Puritans of Massachusetts to the old 'Bay State' made the Australians desire to found a great nation which should be the mistress of the Southern seas. Hence the absence of any jealousy of the central power beyond that which is suggested by the fear that local industrial or commercial interests might be unfairly dealt with.

This attitude of Australian feeling will therefore (if the view here presented be correct) work towards the development of those centralizing tendencies in the Con-

stitution for which its terms give ample scope. In all forms of polity the influences which draw the members of a composite political community together and those which thrust them asunder are partly material, partly sentimental¹. How the influences of material interest will work in Australia I will not attempt to predict. Some of them may prove centrifugal; others, such as those of trade, are clearly centripetal. The Constitution frankly recognizes that economic conditions prescribe a federal rather than a unitary government. But it is a significant fact that the influences of sentiment were arrayed on the side of the Nation rather than on that of the States. One can read this between the lines of the Constitution; and it explains why the Frame of Government is less consistently Federal than is that of the United States.

XXI. MODERN AND DEMOCRATIC CHARACTER OF THE AUSTRALIAN CONSTITUTION.

The Australian instrument is the true child of its era, the latest birth of Time. Compared with it, the American Constitution seems old-fashioned, and parts of the Swiss Constitution positively archaic. Cabinet Government, whose fully developed form is scarcely a century old, is taken for its basis. Ideas and enterprises, problems and proposals, so new that they are only just beginning to be seriously discussed, figure in it. As slavery, an institution almost coeval with the human race, but essentially barbarous, survived to be mentioned (under a transparent euphemism) in the Constitution of the United States, so a new industrial question—viz. the struggle between white labour and free coloured labour—makes its appearance in this Australian document. Here too are the new products and new methods of science, telegraphs and telephones and the keeping of meteorological observations; here is the extension of

¹ See Essay IV.

the suffrage to women; here are the new troubles which spring from contests between employers and workmen; here the new proposals for throwing on the State the function of providing for its members in sickness and old age; here an express recognition of the right of a State to control the traffic in intoxicating liquors. And above all these one perceives through the whole instrument that dominant factor of our age, the ever-present and all-pervading influence of economic forces, of industrial production, of commerce, of finance. The increased and increasing importance of these influences in the life of the modern world, stimulated as they have been by the amazing progress of scientific discovery, finds a fuller expression in this Constitution than in any other yet framed.

As in these points this Constitution is at least abreast of European and American theory, and ahead of European or American practice, so also it represents the high-water mark of popular government. It is penetrated by the spirit of democracy. The actual everyday working of government in the Australian Colonies is more democratic than in Britain, because Britain has retained certain oligarchical habits, political as well as social. It is more democratic than in the United States, because there both the States and the Union are fettered by many constitutional restrictions, and because wealth has there (as indeed in Britain also) been able to exert a control none the less potent because half-concealed. But the Constitution of this Federal Commonwealth is more democratic than are the Constitutions of the several Australian colonies, in some of which property qualifications and nominated second chambers have survived till now. It prescribes no qualification for a Senator or Representative beyond his having attained the age of twenty-one and being himself qualified to become an elector. He need not even be a resident in the State where he seeks election. The Senate as well as the House is elective; both are chosen directly by the peo-

ple, and on the basis of the suffrage which each State prescribes for the election of its more popular House. The duration of the House is only three years. The direct popular vote, an institution specially characteristic of advanced democracy, which has been developed independently in the United States and in Switzerland (where it has taken the double form of a Referendum to the people and an Initiative proceeding from the people), is here applied to the enactment of amendments to the Constitution, and, in the form of a general election of both Houses simultaneously, to the settlement of deadlocks between the Houses. There is no veto on the acts of the Legislature, for that vested in the Governor-General and in the Crown is not intended to be used except in the rare cases where imperial interests may be touched. In fact all those checks and balances in the English and American Constitutions by which the censors of democracy used to set such store, have here dwindled down to one only, viz. the existence of two Chambers. These two will be elected on the same franchise and composed of similar men, but the tendency to dissension so natural to rival bodies may sometimes interpose delays and ought certainly to make the criticism of proposals more searching. If the principle of popular sovereignty is expressed with equal clearness in the Constitutions of America and Switzerland, it assumes in this Australian Constitution a more direct and effective form, because many of the restrictions which the two former constitutions (and especially that of America) impose on the legislature in the supposed interests of the people are absent from the Australian instrument. In Australia the people, through their legislature with its short term, are not only supreme, but can, by the legislature's control of the Executive, give effect to their wishes with incomparable promptitude. For this purpose, the expression 'people' practically means the leader who for the time being commands the popular majority. Holding in his hand both the Executive

power of the Cabinet and the legislative power of Parliament, he has opportunities of effecting more than any one man can effect under the constitutions either of America or of Switzerland.

The solitary restraint which Australia provides is the co-ordinate authority of the Senate, a hostile majority in which may check or at least delay his legislative projects. Yet if his party in the country be well organized and his programme alluring to the masses he may control the Senate as well as the House, for it does not follow that because the smaller States have prudently placed their interests under the protection of the Senate, they will on the great issues of politics be usually found opposed to their larger neighbours¹.

This highly democratic character of their Constitution has been fully appreciated by Australian statesmen. The effusiveness with which they dwell upon it is probably more sincere than even that which is displayed by politicians in England, America, or France, when they chant the praises of the multitude. Australians are as sanguine in their temper now as Americans were in the days before the clouds of Slavery and Secession had begun to darken their sky.

XXII. POLITICAL PARTY IN AUSTRALIA.

Although the Constitution says no word about political parties, the fact that it contemplates a party system is written over it in bold characters. The sages of the Philadelphia Convention of 1787 neither intended nor expected that the scheme they devised would fall into the hands of parties. Indeed they had a touching faith, dispelled as soon as Washington retired from the scene, that the electors who were to be chosen to elect the President would select the best man in the nation irre-

¹ In the first election of members of the two Houses, which took place while these pages were passing through the press, every State was divided upon the issue of Free Trade *versus* Protection, though the Protectionist (or high-tariff) party secured more seats, in proportion, in the House than it did in the Senate.

spective of his political ties. The Swiss, strange as it may seem to men of English or Anglo-American race, have succeeded in keeping their Executive, elected though it is by the Chambers, out of party politics altogether, nor do parties dominate the legislature and colour the public life of the nation as in America and England. But Government of the English 'Cabinet type' is essentially party Government, that is to say, it has been so hitherto both in England and wherever else it has been tried, and no one has yet shown how it can be made to work otherwise.

In America the great parties are younger than the Constitution, which may be said to have created them. In England they are older than Cabinet Government proper, being practically contemporaneous in their rise with that very rudimentary form of the Cabinet which began to emerge in the time of King Charles II. In Australia every colony has had such active and skilfully-organized parties that no one doubts but what the Federal Legislature will find its first Ministry forthwith provided with a competent Opposition. It is generally believed that the tariff will furnish the first, and for some time the main, ground of party division, for the new Government must begin by providing itself with an adequate revenue; the chief part of that revenue must be raised by indirect taxation, and the issue of Free Trade *versus* Protection has for years past been a burning one in the largest Colonies.

I have observed that the Australian scheme contemplates a party system to work it. But what sort of a party system? Obviously one in which there are two parties only, each cohesive, each prepared to replace its antagonist in the Executive. Such was the party system of England till the present generation. Such has been the party system of the United States. Exceptions indeed there have been, such as the Know-Nothing party in 1852, the Greenback party in 1876, the Populist party which arose in 1889, and is not quite extinct now (Febru-

ary 1901). In the United States the power of the two great organizations is so vast, and the cost of creating a new party so deterrent, that a third organization seldom appears, and if it appears, presently disappears. But in France there have been and are several parliamentary groups, which frequently change their attitude towards one another, sometimes combining to support a Ministry, sometimes falling asunder and leaving it to perish, because one group alone was not sufficient to sustain it. Hence the lives of Cabinets have been short, and would have been still shorter but for the fact that an imminent peril to republican government itself has sometimes compelled the various republican groups to hold together. In Britain the same difficulty became acute from 1880 onwards, as the Irish Nationalists consolidated themselves in a distinct Third Party; and it may at any moment create serious embarrassment. It exists in Germany also, and in the Reichsrath of the Austrian half of the Austro-Hungarian Monarchy. Now in several of the Australian Colonial Parliaments a Labour party has recently arisen, which, keeping itself independent of the two older parties, can throw its weight on one or the other side and endanger the stability of Cabinets. Should this phenomenon reappear in the Parliament of the Commonwealth, it will complicate still further a position which the co-ordinate powers of Senate and House make complicated enough already¹.

XXIII. POLITICAL ISSUES LIKELY TO ARISE IN AUSTRALIA.

The mention of parties suggests another question, the last I shall attempt to discuss, viz. the lines on which the political life of Australia is likely to move under her new Constitution. It is a topic on which little will be

¹ Since these lines were written, the phenomenon has reappeared, for at the first elections, held in the spring of 1901, of the Senate and House, the Labour party obtained more than one-fifth of the seats in each House.

said by any one who remembers how seldom great constitutional changes have been followed by the results prophesied at the time. The Reform Bill of 1832 in Britain, the Civil War in the United States, the union of Italy under the dynasty of Savoy, not to speak of the French Revolutions of 1789 and 1848, all brought forth fruits very different from those predicted by some of the most judicious and unbiassed contemporary observers. Even the extension of the suffrage and redistribution of seats effected in Britain in 1884-5 were followed by a shifting of the balance of party strength exactly the opposite of that which the shrewdest party politicians had expected. But without attempting forecasts, one may try to indicate certain conditions likely to affect the development of Australian national and political life under the new form which this Constitution gives it.

First let us ask what are the controversies likely to occupy the nation and to supply a basis for national parties?

Taking one country with another, it will be found that the questions on which men have grouped themselves into parties may be classed under five heads, viz. :—

1. Questions of Race, such as those which have contributed to distract Ireland, which to-day trouble the Austrian Monarchy and (as respects the Poles) the Prussian Monarchy, which exist, though at present not acute, in Canada, and which are painfully acute in South Africa.

2. Questions of religion, now generally less formidable than they once were, yet embittering disputes regarding education in many modern countries.

3. Questions relating to foreign policy, whether as to the general lines on which it should be conducted, or as to the attitude to be held towards particular States at any given moment.

4. Questions regarding the distribution of political power within the nation itself.

5. Questions of an economic or economico-social

kind, *e.g.* regarding the disposal of land in public hands or its tenure in private hands, regarding the conditions of labour, regarding taxation and finance, the policy of Protection or Free Trade, the policy of progressive imposts, the propriety of assisting particular industries or particular classes out of public funds, whether national or local. Some of these may seem to be rather social than economic, but it will be found upon scrutiny that it is their economic aspect, *i.e.* their tendency to take money from or give money to some class in the community, that makes them bases for party combination. A purely social question seldom assumes great political significance.

(1, 2) Applying this classification to Australia we shall find that the first two sets of questions are absent. All the people are of practically the same race. None are animated by any religious passion, although controversies have sometimes arisen over theological teaching in State schools.

(3) Questions of foreign policy do not, strictly speaking, come within the scope of the Commonwealth Parliament, because they belong to the mother country. Nevertheless, it cannot be doubted that the Parliament will from time to time interest itself in them, especially as regards the isles of the Pacific and of the Eastern Archipelago, and will give forcible expression to its views should any crisis arrive. One can well imagine that the question of the attitude which the Commonwealth should assume, or urge the mother country to assume, towards Germany or France, or Holland, or even towards China or Japan or the United States, when any of these Powers may be taking action in the Western Pacific, might give rise to political contention.

(4) As respects the distribution of political power and the structure of the Federal Government, Australia is so democratic already that it cannot go much further. It will doubtless, however, be proposed to extend to women in all the States that right of voting at Common-

wealth elections which they already enjoy in South Australia and Western Australia, under the local law, or to apply more widely the institution of the direct popular vote; or to amend the Constitution in some point which will raise an issue between the more radical and the more conservative sections of opinion. That questions of constitutional amendment have played so small a part in American politics may be attributed to the extreme difficulty of securing the majorities required for altering the Constitution. In Australia the process will be far easier. The history of the United States during the first seventy years of the Constitution suggests that the question of the respective rights of the Federation and of the States may furnish a prominent and persistent issue. This is quite possible, for in Federations there is a tendency for many controversies of various kinds to connect themselves with, or to raise afresh, controversies regarding the true construction of the Federal instrument as respects the powers which it assigns to the Nation and to the component communities.

(5) It is however questions of the economic order that are likely to occupy, more than any others, the minds and energies of Australian statesmen. The tariff is a practically inexhaustible topic, because apart from the general issue between a Protective and Free Trade policy, the particular imports to be taxed and the particular duties to be imposed will furnish matter for debates that can hardly have finality, seeing that circumstances change, and that the financial needs of the Government will increase. It need hardly be said that in a new country like Australia direct taxation is difficult to collect and highly unpopular, so that larger recourse will be had to customs and excise than orthodox economists could justify in Europe. The financial relations between the Commonwealth and the States will be another fertile source of controversy. So may the regulation of the railways, which the Commonwealth seems likely to take over. So will the arrangements for secur-

ing the respective rights of different States as regards both irrigation and the navigation of the rivers, practically the only rivers of the Continent, which intersect the three south-eastern colonies. Among the labour questions likely to arise, one problem, much before the minds of Australians, may be found to cause difficulties in its details if not in its general principle; viz. the exclusion of immigrants of coloured race, Chinese, Japanese, Malays, and Indian coolies. The white labourers of the temperate colonies have been strongly opposed to the admission of such strangers, but the planters of the tropical north, who have used the labour of Pacific islanders on their sugar estates, take a different view of the case.

Some may think that the obvious line of party division will be found to be that which ranges the four smaller and the two larger States into opposite camps. If this should happen, which may well be doubted, it will be owing to a coincidence of economic interests, and not to the mere fact that the strength of one set of States lies in the House, that of the other in the Senate. The two largest States, New South Wales and Victoria, have hitherto been conspicuously divergent in their financial policy. In America, though the small States fought hard against the large ones in the Convention of 1787, the distinction has never since that date possessed any permanent political significance.

If parties form themselves on any geographical lines, the line will more probably be one between the tropical and the temperate regions. These tropical regions are at present much less populous and wealthy than is the temperate south-east corner of the Continent. They will doubtless increase both in wealth and in population, but as the strong sun forbids out-door labour to white men, the population enjoying political rights cannot, for generations to come, be a large one.

XXIV. POSSIBLE ENTRANCE OF NEW STATES.

The existing situation may be so materially affected by the entrance of new States that one naturally asks what are the prospects that new States will be admitted. As the whole Continent is already divided among the five existing States, new ones can come into being only by carving up the three larger of these. There has already been talk of dividing Queensland into two or perhaps three States. Others might be formed out of the now sparsely peopled regions of the north and north-west, when they have become more thickly inhabited. How fast the process of colonization will advance in these regions will depend upon what engineering science may be found able to do for the more arid tracts in the way of storing rain-water and raising it from deep wells, while something will depend on the disposition of the Federal Government to spend money for that purpose. Nor is another element to be overlooked. Vast as is the mineral wealth already known to exist in the explored parts of Australia, it may be equalled by that which exists in regions which have received no thorough geological examination. Should mines begin to be worked in the arid tracts, an additional motive would be given for the provision of water supplies there, for the existence of a population furnishing markets would stimulate men to develop the capacities of the soil for ranching and even for tillage. These possibilities show how many factors hitherto undetermined may go to moulding the political future of the country. The increase of population in regions now thinly peopled would either make the four smaller States, or some of them, the equals of the larger, or would, more probably, lead to the creation of new States, some of them with a character different from that of the two which now command a decisive majority in the House of Representatives. As the settlement of the Mississippi Valley changed American politics, so a filling up of large parts

of the interior and north of Australia, unlikely as this now appears, might affect her constitutional growth in ways at which we can now only guess.

At present not only these tropical regions, but also the settled parts of Western Australia are separated by vast uninhabited spaces from the populous south-east corner of the continent. Hence just as in Canada an Intercolonial Railway to connect Nova Scotia and New Brunswick with Quebec and Ontario was provided for in the Constitution of 1867, and just as the construction of the great transcontinental Canadian Pacific line enabled Manitoba and British Columbia to become effective members of the Federation, so a line of railway from east to west across Australia, as well as the completion of the line, already partly constructed, from the south to the north, are among the political needs of the Commonwealth, and might do much to weld its people into an even more united nation.

One community remains to be mentioned whose geographical position towards Australia recalls the saying of Grattan that while the Ocean forbade Ireland to be politically severed from Britain, the Sea forbade an incorporating union. It has been hoped that New Zealand would enter the Federation, and she has herself seriously considered whether she ought to do so. With a healthy climate, a soil generally well watered, and an area not much less than that of the British Isles, New Zealand has evidently a great future before her. The population, now between 700,000 and 800,000, has tripled within the last thirty years; and the level of personal comfort and well-being is as high as anywhere in the world. Her accession would give further strength to the Federal Commonwealth. But New Zealand, as one of her statesmen observed, has twelve hundred reasons against union with Australia, for she is separated from the nearest part of Australia by twelve hundred miles of stormy sea, a distance more than half of that which divides Ireland from Newfoundland. She may therefore

think that some sort of permanent league with Australia, for the purposes of combined naval defence and joint action in external questions of common concern, would conform better to her outlying position than would participation in a Legislature which must be mainly occupied with the affairs of Australia. Of the subjects assigned by the Constitution to the Commonwealth Parliament, there are several in which, because purely Australian, New Zealand would have no interest, some also with regard to which she could legislate better for herself than the Commonwealth could legislate for her, inasmuch as her economic and social conditions are not the same as those of Australia. An illustration is furnished by the difference between the native races in the two countries. The Australian aborigines, one of the most backward branches of the human family, are obviously unfit for the exercise of any political functions. They are not permitted to vote in any colony, and the Constitution provides that in determining the number of representatives to be allotted to a State they shall not be reckoned among its population. But the Maoris of New Zealand are an intelligent folk, to whom New Zealand has given the suffrage, and who are now on excellent terms with their white neighbours. It would no doubt be possible for the Commonwealth Parliament to legislate differently for them and for the 'black fellows' of Australia; but their dissimilar character shows the difference of the problems which arise in the two countries. New Zealand has however an interest in obtaining free access to the Australian markets, and her final decision as to entering the Federation may be influenced by the commercial policy which the larger country pursues¹.

In this changeful world, no form of government ever remains the same during a long series of years, and no Federation, however strictly the rights of its members

¹ While these pages were passing through the press, a Commission appointed in New Zealand to consider the question has reported strongly against her entrance into the Australian Federation.

may be secured by a Rigid Constitution, can continue to maintain exactly the same balance of powers between the Nation and the States. I have already expressed the opinion that the tendency is in Australia likely to be rather towards consolidation than towards a relaxation of the Federal bond, because not only national sentiment but economic influences also will work in that direction. Much however may depend on a factor still unpredictable, the relations between Australia, together with the British Empire generally, and the other Powers which are interested in the Western Pacific. Nothing does so much to draw together a people already homogeneous as the emergence of issues which threaten, or result in, a struggle against foreign States. The sentiment of internal unity is accentuated. Public attention is diverted from domestic controversies. Powers are willingly yielded to the Executive which would in days of peace be refused. The consequences may be good or evil—they have sometimes been in the long run evil—but either way they alter the character of the government. They may even give a new direction to its policy, as the United States has recently, and quite unexpectedly, discovered.

XXV. FUTURE RELATIONS OF THE AUSTRALIAN COMMONWEALTH TO BRITAIN.

Australia however is not a State standing alone in the world, but a member of the British Empire, so we cannot close an examination of her Constitution without asking whether the union of her Colonies will affect her relations to the mother country.

When the first Convention to frame a Federal Constitution assembled in 1891, most Englishmen supposed that a Federated Australia would soon aspire to complete independence. Australian statesmen saw deeper, and predicted that the formation from the several Colonies of an Australian Nation would tend not to loosen,

but rather to draw closer the ties that unite the people to Great Britain. So far as can be judged from the course of Australian opinion during the past ten years, this has been the result. There were at first some who advocated Federation as a means to independence. But they soon desisted, overborne by a different current. The same National feeling through which Federalism triumphed seems to have deepened the sense of unity with other members of the British race. And possibly that suspicion which colonies are apt to feel of a sort of patronage on the part of the mother country, and which sometimes disposes them to be self-assertive, may have vanished as they came to realize that the old country was proud of them and wished to treat them not only as a daughter but as an equal. Neither do they, democrats as they are, harbour distrust of a monarchy, or deem their freedom in any way hampered by it. The love for republicanism in the abstract, though far stronger in Continental Europe than in England, was everywhere a force in the first half of the nineteenth century. It has faded away in the second half throughout the British world, because the solid substance of freedom has been secured, because the old mischiefs of monarchical government have reappeared in republics, because men's minds have begun to be occupied with economic and social rather than with purely political questions. The fact that the British Crown is titular head of the Australian Commonwealth will not render the working of the Constitution less truly popular, any more than has befallen in Canada, a somewhat less democratic country. So far as the internal politics of Australia are concerned, she will take her own course, scarcely affected by her connexion with England. But the fact that she is, and seems likely to remain, a part of the British Empire, sharing in the enterprises and conflicts and responsibilities of that vast body, is a fact of the highest moment for her future and for the future of the world. Still more momentous might her relation to the Empire become

should any scheme be devised for giving the self-governing Colonies of Britain a share in the financial liability for common defence, together with a voice in the determination of a common foreign policy. The difficulties of constructing any constitutional machinery for this purpose are obvious, yet perhaps not insurmountable. Should any such arrangement be ever reached, it will probably be reached through some crisis in the history of the Empire itself.

Sixty years ago it was generally believed that as soon as each British self-governing colony had become conscious of its strength, it would naturally desire, and could not be refused, its independence. But the last sixty years have brought with them many favouring conditions; and among these, one of which no one then thought, the long reign of a sovereign whose personal character, by its purity, simplicity and kindliness, won such reverence and affection, not only for herself, but also for the ancient institutions at the head of which she stood, that the prolongation of her life may be reckoned among the causes which have kept these far-off lands a part of the British realm and have given its actual form to the Commonwealth of Australia.
